CONTENTS

FOREWORD.....	12
INTRODUCTION.....	14
1 Scope.....	15
2 Normative references	15
3 Terms and definitions	15
4 Symbols and abbreviated terms.....	15
5 Pre-defined communication objects	16
5.1 General.....	16
5.1.1 Overview	16
5.1.2 Object 1000 _h : Device type.....	16
5.1.3 Object 1001 _h : Error register.....	17
5.1.4 Object 1003 _h : Pre-defined error field	17
5.1.5 Object 1005 _h : COB-ID SYNC.....	17
5.1.6 Object 1006 _h : Communication cycle period	17
5.1.7 Object 1007 _h : Communication window length	18
5.1.8 Object 1016 _h : Heartbeat consumer time	18
5.1.9 Object 1017 _h : Heartbeat producer time	18
5.1.10 Object 1018 _h : Identity.....	18
5.1.11 Object 1029 _h : Error behaviour	18
5.2 PDO communication	19
6 General application objects for CANopen devices.....	19
6.1 General.....	19
6.2 Application objects produced by CANopen devices with NMT slave functionality	20
6.2.1 General	20
6.2.2 Object 6000 _h : Supported virtual devices.....	20
6.2.3 Object 6002 _h : Status word.....	23
6.2.4 Object 6003 _h : Device capability.....	25
6.2.5 Object 6004 _h : System date and time (optional).....	27
6.2.6 Object 6005 _h : Device unique part number (optional).....	28
6.2.7 Object 6006 _h : Device electronic production date (optional).....	28
6.2.8 Object 6007 _h : Device installation date (optional)	29
6.2.9 Object 6008 _h : Device nominal voltage (optional, mandatory for active devices).....	30
6.2.10 Object 6009 _h : Device alarm status	32
6.2.11 Object 600A _h : Device alarm capability.....	33
6.2.12 Object 600B _h : Device warning status (optional)	35
6.2.13 Object 600C _h : Device warning capability (optional)	37
6.2.14 Object 600E _h : Implemented specification versions	39
6.2.15 Object 6020 _h : Device request dynamic voltage limitation.....	41
6.2.16 Object 6022 _h : Device request dynamic current input limitation.....	42

6.2.17	Object 6023 _h : Device request dynamic current output limitation	44
6.2.18	Object 6024 _h : Device maximum continuous input current	46
6.2.19	Object 6025 _h : Device maximum continuous output current	48
6.2.20	Object 6026 _h : Device maximum voltage	49
6.2.21	Object 6027 _h : Device minimum voltage	51
6.2.22	Object 6039 _h : Device actual external voltage (optional).....	52
6.2.23	Object 603A _h : Device peak input current	54
6.2.24	Object 603B _h : Device peak input current time (optional).....	55
6.2.25	Object 603C _h : Device peak output current (optional)	57
6.2.26	Object 603D _h : Device peak output current time (optional).....	58
6.2.27	Object 603E _h : Device actual current	59
6.2.28	Object 6040 _h : Device actual voltage	61
6.2.29	Object 6042 _h : Device internal temperature (optional)	62
6.2.30	Object 6043 _h : Device time on (optional)	64
6.2.31	Object 6044 _h : Device time standby (optional)	64
6.2.32	Object 6045 _h : Device switch on counter (optional).....	65
6.2.33	Object 6060 _h : CANopen device measurement timing (optional)	65
6.2.34	Object 6064 _h : Device maximum AUX continuous input current (optional).....	69
6.2.35	Object 6065 _h : Device maximum AUX continuous output current (optional)	70
6.2.36	Object 6066 _h : Device maximum AUX voltage (optional).....	72
6.2.37	Object 6067 _h : Device minimum AUX voltage (optional).....	73
6.2.38	Object 6070 _h : Device actual AUX current (optional).....	75
6.2.39	Object 6071 _h : Device actual AUX voltage (optional)	77
6.2.40	Object 6072 _h : Device available output voltage	78
6.2.41	Object 6073 _h : Device available output current	79
6.2.42	Object 6074 _h : Device available input current (optional)	81
6.3	Security	82
6.3.1	General	82
6.3.2	Object 6311 _h : Locking status.....	83
6.4	Application objects consumed by CANopen devices with NMT slave functionality (mandatory).....	84
6.4.1	General	84
6.4.2	Object 6001 _h : Control word	85
6.4.3	Object 6046 _h : Device set maximum voltage.....	86
6.4.4	Object 6047 _h : Device set minimum voltage.....	88
6.4.5	Object 604A _h : Device set maximum continuous input current	89
6.4.6	Object 604B _h : Device set maximum continuous output current	90
6.4.7	Object 604C _h : Device set maximum peak input current	91
6.4.8	Object 604D _h : Device set maximum peak input current time	92
6.4.9	Object 604E _h : Device set maximum peak output current.....	93
6.4.10	Object 604F _h : Device set maximum peak output current time	94

6.5	Application objects consumed by CANopen devices with NMT slave functionality (optional).....	95
6.5.1	General	95
6.5.2	Object 600D _h : Error behaviour at process interface (optional)	95
6.5.3	Object 6058 _h : Device security key (optional)	96
6.5.4	Object 6059 _h : Devices' user name and address (optional).....	97
6.5.5	Object 605A _h : Device password (optional).....	99
6.5.6	Object 6053 _h : Prefixes and SI units for analogue values (optional).....	100
7	Application objects relevant for fleet management (optional)	103
7.1	General.....	103
7.2	Object 63D5 _h : Travelled distance	103
7.3	Object 63D6 _h : Travelled distance current trip.....	104
7.4	Object 63D7 _h : Travelled time.....	105
7.5	Object 63D8 _h : Travelled time current trip	106
7.6	Object 63D9 _h : Transferred watt hours.....	107
7.7	Object 63DA _h : Current trip transferred watt hours.....	108
8	Stationary applications (optional).....	110
8.1	General application objects relevant for stationary applications	110
8.2	Object 6010 _h : Ambient temperature	110
8.3	Object 6011 _h : Phase 1 AC Current	111
8.4	Object 6012 _h : Phase 2 AC Current	113
8.5	Object 6013 _h : Phase 3 AC Current	114
8.6	Object 6014 _h : Phase 1 AC voltage.....	115
8.7	Object 6015 _h : Phase 2 AC voltage.....	117
8.8	Object 6016 _h : Phase 3 AC voltage.....	118
8.9	Object 6017 _h : Line 12 AC voltage	120
8.10	Object 6018 _h : Line 23 AC voltage	121
8.11	Object 6019 _h : Line 13 AC voltage	123
8.12	Object 601A _h : Phase 1 AC reactive power	124
8.13	Object 601B _h : Phase 2 AC reactive power	126
8.14	Object 601C _h : Phase 3 AC reactive power.....	127
8.15	Object 601D _h : Phase 1 AC apparent power	129
8.16	Object 601E _h : Phase 2 AC apparent power	130
8.17	Object 601F _h : Phase 3 AC apparent power.....	132
8.18	Object 6030 _h : Phase 1 AC real power.....	134
8.19	Object 6031 _h : Phase 2 AC real power.....	135
8.20	Object 6032 _h : Phase 3 AC real power.....	137
8.21	Object 6033 _h : Total AC reactive power	138
8.22	Object 6034 _h : Total AC apparent power.....	140
8.23	Object 6035 _h : Total AC real power.....	141
8.24	Object 6036 _h : Phase1 power factor (cos phi)	143
8.25	Object 6037 _h : Phase 2 power factor (cos phi).....	144

8.26	Object 6038 _h : Phase 3 power factor (cos phi)	146
8.27	Object 6050 _h : AC Frequency	147
8.28	Object 6051 _h : Isolation resistance	149
8.29	Object 6052 _h : Rated power	150
Annex A (informative) Measured values		152
A.1	General.....	152
A.2	Actual voltage	152
Annex B (normative) Process data object (PDO) communication for EMS		153
B.1	General.....	153
B.2	Specification of messages	153
B.3	Allocation of PDOs to virtual devices	153
B.4	Detailed PDO parameters	159
B.4.1	General	159
B.4.2	TPDO parameters for message number 1	159
B.4.3	TPDO parameters for message number 2	162
B.4.4	TPDO parameters for message number 3	164
B.4.5	TPDO parameters for message number 4 to 9	167
B.4.6	TPDO parameters for message number 10	168
B.4.7	TPDO parameters for message number 12	170

INTERNATIONAL ELECTROTECHNICAL COMMISSION

ELECTRIC VEHICLES CONDUCTIVE CHARGING SYSTEM –

Part 3-5: DC EV supply equipment where protection relies on double or reinforced insulation – Pre-defined communication parameters and general application objects

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

IEC TS 61851-3-5 has been prepared by s IEC technical committee 69: Electrical power/energy transfer systems for electrically propelled road vehicles and industrial trucks. It is a Technical Specification.

The text of this Technical Specification is based on the following documents:

Draft	Report on voting
69/651/DTS	69/672/RVDTS 69/672A/RVDTS

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this Technical Specification is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/publications.

The following print types are used:

- requirements: in roman type;
- notes: in small roman type;
- **text formatted in bold and using mixed capital and underline are used as state names and are not to be translated.**

A list of all parts in the IEC 61851 series, published under the general title *Electric vehicles conductive charging system*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

INTRODUCTION

This document is published in separate parts according to the following structure:

IEC TS 61851-3-1, *Electric vehicles conductive charging system – Part 3-1: DC EV supply equipment where protection relies on double or reinforced insulation – General rules and requirements for stationary equipment*

IEC TS 61851-3-2, *Electric vehicles conductive charging system – Part 3-2: DC EV supply equipment where protection relies on double or reinforced insulation – Particular requirements for portable and mobile equipment*

IEC TS 61851-3-4, *Electric vehicles conductive charging system – Part 3-4: DC EV supply equipment where protection relies on double or reinforced insulation – General definitions and requirements for CANopen communication*

IEC TS 61851-3-5, *Electric vehicles conductive charging system – Part 3-5: DC EV supply equipment where protection relies on double or reinforced insulation – Pre-defined communication parameters and general application objects*

IEC TS 61851-3-6, *Electric vehicles conductive charging system – Part 3-6: DC EV supply equipment where protection relies on double or reinforced insulation – Voltage converter unit communication*

IEC TS 61851-3-7, *Electric vehicles conductive charging system – Part 3-7: DC EV supply equipment where protection relies on double or reinforced insulation – Battery system communication*

ELECTRIC VEHICLES CONDUCTIVE CHARGING SYSTEM –

Part 3-5: DC EV supply equipment where protection relies on double or reinforced insulation – Pre-defined communication parameters and general application objects

1 Scope

This part of IEC 61851, which is a Technical Specification, applies to CANopen communication for the conductive transfer of electric power between the supply network and an electric road vehicle or a removable RESS or traction-battery of an electric road vehicle.

This document provides specifications with regard to the pre-defined communication parameters and general application objects.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC TS 61851-3-1:2023, *Electric vehicles conductive charging system – Part 3-1: DC EV supply equipment where protection relies on double or reinforced insulation – General rules and requirements for stationary equipment*

IEC TS 61851-3-4:2023, *Electric vehicles conductive charging system – Part 3-4: DC EV supply equipment where protection relies on double or reinforced insulation – General definitions and requirements for CANopen communication*

EN 50325-4:2002: *Industrial communications subsystem based on ISO 11898 (CAN) For controller-device interface - Part 4: Canopen*

CiA 302-2:2009, *CANopen additional application layer functions – Part 2: Network management* (available at www.can-cia.org)
