Part 4:
Persistent Stored Modules (SQL/PSM)

TECHNICAL CORRIGENDUM 2

Technical Corrigendum 2 to ISO/IEC 9075-4:2011 was prepared by Joint Technical Committee ISO/IEC JTC 1, Information technology, Subcommittee SC 32, Data management and interchange.

8 Additional common elements

8.1 <routine invocation>

1. *Rationale:* Editorial to match change in Foundation.

Replace Syntax Rule 4) with:

4) [Replace SR 9(g)iii)3)] If $X_{Ai}$ is an <SQL variable reference>, an <SQL parameter reference>, a <column reference>, or a <target array element specification>, then the Syntax Rules of Subclause 9.2, “Store assignment”, in ISO/IEC 9075-2, are applied with $P_i$ as \textit{TARGET} and $X_{Ai}$ as \textit{VALUE}.

9 Schema definition and manipulation

9.11 <view definition>

1. *Rationale:* Clarify that adding a subview may not violate a dependency of an SQL-schema object on some property of the subview’s supertable.

Insert a new Syntax Rule.

1.1) [Insert after SR21)s)v.1)5)] The module descriptor of any SQL-server module.

11 SQL-client modules

11.2 <SQL procedure statement>

1. *Rationale:* Clarify the execution of an SQL-statement.

Replace General Rule 1) with:
1) If $S$ is not an <SQL diagnostics statement> or a <compound statement>, then the first diagnostics area is emptied.

12 Data manipulation

12.8 <temporary table declaration>

1. Rationale: A <temporary table declaration> can be executed in direct SQL.

   Replace Syntax Rule 1) with:

   1) $TTD$ shall be contained in an <SQL-client module definition>, in a <direct SQL statement> or in an <SQL-server module definition>.

14 Control statements

14.1 <compound statement>

This Subclause is modified by Subclause 11.27, “<compound statement>”, in ISO/IEC 9075-10.
This Subclause is modified by Subclause 15.1, “<compound statement>”, in ISO/IEC 9075-14.

1. Rationale: If there is an unhandled exception, leave the loop and perform all clean-up actions.

   Replace General Rule 3) c) ii) with:

   3) ...

   c) ...

   ii) If there are unhandled exception conditions at the completion of the execution of a handler (if any), then the execution of GR3) is terminated immediately and evaluation continues with GR 4).
