PRICE CODE **CQ**

ICS 97.040.40

ISBN 978-2-88910-194-8

## CONTENTS

FOREWORD.....	4
1 Scope.....	7
2 Normative references .....	7
3 Terms and definitions .....	7
4 List of measurements .....	9
5 General conditions for measurements.....	9
5.1 General .....	9
5.2 Conditioning of the machine under test and sequence of test procedures.....	10
5.3 Electricity supply for machines .....	10
5.4 Test programme .....	11
5.5 Ambient conditions .....	11
5.6 Water supply .....	11
5.7 Detergent .....	12
5.8 Rinse agent.....	13
5.9 Salt .....	13
6 Cleaning performance .....	13
6.1 General and purpose.....	13
6.2 Load.....	13
6.3 Soiling agents.....	14
6.4 Preparation and application of soiling agents.....	14
6.5 Drying of the soiled dishes.....	21
6.6 Loading and operating.....	22
6.7 Evaluation.....	22
6.8 Expressing results.....	27
7 Drying performance .....	27
7.1 General and purpose.....	27
7.2 Load.....	27
7.3 Loading and operating.....	27
7.4 Evaluation.....	28
7.5 Expressing results.....	31
8 Energy consumption, water consumption and time .....	31
8.1 General and purpose.....	31
8.2 Method of measurement.....	31
9 Airborne acoustical noise.....	33
Annex A (normative) Place settings and serving pieces (non-AHAM style load) .....	34
Annex B (normative) AHAM style load.....	36
Annex C (informative) Illustration of soil distribution.....	39
Annex D (normative) Test materials for laboratories.....	40
Annex E (normative) Description of the reference machine [Type 1].....	42
Annex F (informative) Addresses of suppliers .....	46
Annex G (normative) Microwave oven and through-circulation thermal cabinet .....	50

Annex H (informative) Guidelines for assessing cleaning performance.....	51
Annex I (normative) Test enclosure for built-in dishwasher.....	53
Annex J (informative) Flow chart – test sequence for IEC 60436.....	54
Annex K (normative) Shade chart.....	55
Annex L (informative) Test report format.....	56
Annex M (informative) Adjusting water consumption in the reference dishwasher.....	59
Annex N (normative) Description of the reference machine [Type 2] .....	61
Bibliography.....	65
Figure 1 – Position of the glasses on the microwave turntable .....	16
Figure I.1 – Test enclosure for built-in dishwasher .....	53
Figure N.1 – Reference machine [Type 2] loading plan .....	64
Table 1 – Evaluation of Cleaning Tests .....	23
Table 2 – Evaluation to determine the cleaning index.....	24
Table 3 – Numerical Values of the <i>t</i> -factor for statistical calculations.....	26
Table 4 – Evaluation to determine the drying index.....	29

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

---

### **ELECTRIC DISHWASHERS FOR HOUSEHOLD USE – METHODS FOR MEASURING THE PERFORMANCE**

#### FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 60436 has been prepared by subcommittee 59A: Electric dishwashers, of IEC technical committee 59: Performance of household electrical appliances.

This consolidated version of IEC 60436 consists of the third edition (2004) [documents 59A/114A/FDIS and 59A/116/RVD] and its amendment 1 (2009) [documents 59A/138/CDV and 59A/139/RVC].

The technical content is therefore identical to the base edition and its amendment and has been prepared for user convenience.

It bears the edition number 3.1.

A vertical line in the margin shows where the base publication has been modified by amendment 1.

This third edition cancels and replaces the second edition published in 1981 and constitutes a technical revision. Major changes introduced in the second edition include

- changes made to the soils used in the standard;
- the use of an oven and microwave oven to dry the soils;
- the alternate 15 to 18 hour air dry method to dry the soils;
- the addition of a reference dishwasher;
- the recognition of alternate supply voltages and frequencies;
- the recognition of a cold or hot water supply to the dishwasher;
- the detergent and rinse aid compositions have been updated to reflect current technology;
- the addition of the Aham load;
- the evaluation of the filter systems;
- the modification of the scoring system from 2 to 5 grades;
- the definition of program and cycle time;
- the temperature correction for energy testing;
- harmonization of ambient conditions.

The committee has decided that the contents of the base publication and its amendments will remain unchanged until the maintenance result date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

**IMPORTANT – The “colour inside” logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this publication using a colour printer.**

## INTRODUCTION

In 1996, IEC subcommittee 59A charged its Working Group 2 with the revision of the second edition of IEC 60436 to make it suitable for the international needs and to make it suitable for the current levels of dishwasher performance and technology.

The second edition was published in 1981 and has not been significantly updated.

SC59A instructed the WG2 to take the Cenelec draft standard EN 50242 as the basis for the third edition.

An important reason for the third edition was the need to take into account the needs of all countries such as varying voltages and frequencies, different water supply temperatures and water hardness and availability of specified soils in the various countries.

To meet the goal the following significant technical changes were made.

- The repeatability and reproducibility of the test results have been improved by the introduction of the same model reference dishwasher specified for all locations.
- The soils have been changed to reflect the modern dishwasher's capability.
- The preparation of the soils has been improved to enhance repeatability and reproducibility by the introduction of new drying methods.
- The standard also recognizes various supply voltages and frequencies, cold or hot water supply, an alternate Aham load, the evaluation of dishwasher filter systems.
- The standard has updated the formulation of the detergent and rinse agents to reflect the products on the market today.
- The standard has increased the sensitivity of the grading scale from two to five points to improve repeatability and reproducibility.
- Ambient conditions have been brought closer to harmonization.
- More detailed instructions have been provided for the installation of the various designs of dishwashers.
- Correction formulae have been provided for the correction of energy consumption measurements for varying water supply temperature.

## ELECTRIC DISHWASHERS FOR HOUSEHOLD USE – METHODS FOR MEASURING THE PERFORMANCE

### 1 Scope

This international standard applies to electric dishwashers for household use that are supplied with hot and/or cold water.

The object is to state and define the principal performance characteristics of electric dishwashers for household use and to describe the standard methods of measuring these characteristics.

This standard is concerned neither with safety nor with performance requirements.

### 2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 60350, *Electric cooking ranges, hobs, ovens and grills for household use – Methods for measuring performance*

IEC 60704-2-3, *Household and similar electrical appliances – Test code for the determination of airborne acoustical noise – Part 2-3: Particular requirements for dishwashers*

IEC 60704-3, *Test code for the determination of airborne acoustical noise emitted by household and similar electrical appliances – Part 3: Procedure for determining and verifying declared noise emission values*
