CONTENTS

FOREWORD.....	4
1 Scope.....	6
2 Normative references.....	6
3 Installation planning.....	7
3.1 Installation specification.....	7
3.2 Route considerations.....	7
3.3 Cable installation tension considerations.....	8
3.4 Cable tension predictions – duct installations.....	8
3.5 Maximum cable tension.....	9
3.5.1 General.....	9
3.5.2 Total cable tension – pulling applications.....	9
3.5.3 Total cable tension – pushing, blowing, or pulling applications.....	11
3.6 Installation temperature.....	15
3.7 Information and training.....	16
4 Cable installation methods.....	16
4.1 General considerations.....	16
4.2 Safety in confined spaces.....	16
4.3 Pre-installation procedures.....	16
4.4 Installation of optical cables in underground ducts.....	17
4.4.1 Application.....	17
4.4.2 Installation using trenchless technique.....	17
4.4.3 Cable overload protection methods.....	17
4.4.4 Cable bending and guiding systems.....	17
4.4.5 Winching equipment and ropes.....	18
4.4.6 Cable friction and lubrication.....	18
4.4.7 Cable handling methods to maximise installed lengths.....	19
4.4.8 Jointing length allowance.....	19
4.4.9 Blowing techniques for the installation of fiber optic cables into ducts.....	20
4.4.10 Optical fibre cable installation by floating technique.....	20
4.5 Installation of aerial optical cables.....	20
4.5.1 Application.....	20
4.5.2 Installation methods.....	20
4.5.3 Cable protection methods.....	21
4.5.4 Winching and guiding systems.....	21
4.5.5 Methods to maximise lengths.....	21
4.5.6 Jointing length allowance.....	21
4.5.7 In-service considerations.....	21
4.6 Installation of buried cable.....	22
4.6.1 Installation methods.....	22
4.6.2 Cables in trenches.....	22
4.6.3 Installing cables by ploughing.....	23
4.6.4 Methods to maximise lengths.....	23
4.6.5 Jointing length allowance.....	23
4.7 Installation in special situations.....	24
4.7.1 Tunnel and building lead-in.....	24
4.7.2 Bridges.....	24

4.7.3	Underwater.....	24
4.7.4	Storm and sanitary sewers	24
4.7.5	High pressure gas pipes	24
4.7.6	Drinking water pipes	24
4.7.7	Industrial environments	25
4.8	Installation of indoor cables.....	25
4.8.1	General considerations.....	25
4.8.2	Cable routing.....	25
4.8.3	Confined spaces.....	25
4.9	Blown systems	25
4.9.1	General considerations.....	25
4.9.2	Installation of cables in the vertical riser area of buildings	26
4.9.3	Tube installation	26
4.9.4	Fibre and cable installation.....	27
4.10	Cable location	28
5	Lightning protection	28
	Bibliography.....	29
	Figure 1 – Cable tension calculations (equations. 1 through 3)	10
	Figure 2 – Cable tension calculations (equations. 4 through 9).....	12
	Figure 3 – Cable tension calculations; Series1 = blowing; Series2 = pushing; Series3 = pulling.....	15
	Figure 4 – Optical fibre cabling in an underground duct.....	20
	Figure 5 – Aerial cable installation	22
	Figure 6 – Cable installation by cascade blowing	28
	Table 1 – Calculation for total tension.....	10
	Table 2 – Calculation for pulling force in Figure 2	12
	Table 3 – Calculation for pushing force in Figure 2	13
	Table 4 – Calculation for blowing force in Figure 2.....	14
	Table 5 – Minimum installation depths	23

INTERNATIONAL ELECTROTECHNICAL COMMISSION

OPTICAL FIBRE CABLES –

Guide to the installation of optical fibre cables

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

The main task of IEC technical committees is to prepare International Standards. However, a technical committee may propose the publication of a technical report when it has collected data of a different kind from that which is normally published as an International Standard, for example "state of the art".

IEC 62691, which is a technical report, has been prepared by subcommittee 86A: Fibres and cables, of IEC technical committee 86: Fibre optics.

The text of this technical report is based on the following documents:

Enquiry draft	Report on voting
86A/1415/DTR	86A/1426/RVC

Full information on the voting for the approval of this technical report can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

A bilingual version of this publication may be issued at a later date.

OPTICAL FIBRE CABLES –

Guide to the installation of optical fibre cables

1 Scope

Optical fibre cabling provides a high performance communications pathway whose characteristics can be degraded by inadequate installation. This technical report provides guidance to assist the user and installer with regard to the general aspects of the installation of optical fibre cables covered by the IEC 60794 series of specifications, and the particular aspects of the 'blowing' technique.

Optical fibre cables are designed so that normal installation practices and equipment can be used wherever possible. They do, however, generally have a strain limit rather lower than metallic conductor cables and, in some circumstances, special care and arrangements may be needed to ensure successful installation.

It is important to pay particular attention to the cable manufacturer's recommendations and stated physical limitations and not exceed the given cable tensile load rating for a particular cable. Damage caused by overloading during installation may not be immediately apparent but can lead to failure later in its service life.

This guide does not supersede the additional relevant standards and requirements applicable to certain hazardous environments, e.g. electricity supply and railways.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 60794-3 series, *Optical fibre cables – Part 3: Sectional specification – Outdoor cables*

IEC 60794-3-40, *Optical fibre cables – Part 3-40: Outdoor cables – Family specification for sewer cables and conduits for installation by blowing and/or pulling in non-man accessible storm and sanitary sewers*

IEC 60794-3-50, *Optical fibre cables – Part 3-50: Outdoor cables – Family specification for gas pipe cables and subducts for installation by blowing and/or pulling/dragging in gas pipes*

IEC 60794-3-60, *Optical fibre cables – Part 3-60: Outdoor cables – Family specification for drinking water pipe cables and subducts for installation by blowing and/or pulling/dragging/floating in drinking water pipes*

IEC/TR 62362, *Selection of optical fibre cable specifications relative to mechanical, ingress, climatic or electromagnetic characteristics – Guidance*

IEC/TR 62470, *Guidance on techniques for the measurement of the Coefficient Of Friction (COF) between cables and ducts*

ISO/IEC 24702, *Information technology – Generic cabling – Industrial premises*

ISO/IEC TR 29106, *Information technology – Generic cabling – Introduction to the MICE environmental classification*

ITU-T Recommendation K.25, *Protection of optical fibre cables*

ITU-T Recommendation L.35, *Installation of optical fibre cables in the access network*

ITU-T Recommendation L.38, *Use of trenchless techniques for the construction of underground infrastructures for telecommunication cable installation*

ITU-T Recommendation L.57, *Air-assisted installation of optical fibre cables*

ITU-T Recommendation L.61, *Optical fibre cable installation by floating technique*

ITU-T Recommendation L.77, *Installation of optical fibre cables inside sewer ducts*
