CONTENTS

FOREWORD	8
INTRODUCTION	10
1 Scope	11
2 Terms and definitions	11
3 Outline of specifications of AC filters for HVDC systems	12
3.1 General	12
3.2 Boundaries of responsibility	13
3.3 Scope of studies	14
3.4 Scope of supply	15
3.5 Technical data to be supplied by contractor	16
3.6 Alternative proposals by bidders	16
4 Permissible distortion limits	17
4.1 General	17
4.2 Voltage distortion	18
4.2.1 General	18
4.2.2 Voltage distortion – Definitions of performance criteria	18
4.2.3 Voltage distortion – Discussion and recommendations	18
4.2.4 Voltage distortion – Determination of limits	19
4.2.5 Voltage distortion – Pre-existing harmonic levels	22
4.2.6 Voltage distortion – Relaxed limits for short term and infrequent conditions	23
4.2.7 Treatment of interharmonic frequencies	23
4.3 Distortion limits pertaining to the HV and EHV network equipment	24
4.3.1 HVAC transmission system equipment	24
4.3.2 Harmonic currents in synchronous machines	24
4.3.3 Nearby HVDC installations	25
4.4 Telephone interference	25
4.4.1 General	25
4.4.2 Causes of telephone interference	25
4.4.3 Telephone interference – Definitions of performance criteria	25
4.4.4 Telephone interference – Discussion	25
4.4.5 Telephone interference – Determination of limits	26
4.4.6 Telephone interference – Pre-existing harmonic levels	28
4.4.7 Telephone interference – Limits for temporary conditions	28
4.5 Special criteria	29
5 Harmonic generation	29
5.1 General	29
5.2 Converter harmonic generation	29
5.2.1 Idealized conditions	29
5.2.2 Realistic conditions	31
5.3 Calculation methodology	33
5.3.1 General	33
5.3.2 Harmonic currents for performance, rating and other calculations	33
5.3.3 Combining harmonics from different converter bridges	34
5.3.4 Consistent sets	34
5.3.5 Harmonic generation for different DC power ranges	35

5.4	Sensitivity of harmonic generation to various factors	36
5.4.1	Direct current, control angle and commutation overlap.....	36
5.4.2	Effect of asymmetries on characteristic harmonics	37
5.4.3	Converter equipment parameter tolerances	37
5.4.4	Tap steps	37
5.4.5	Theoretically cancelled harmonics.....	37
5.4.6	Negative and zero phase sequence voltages.....	38
5.4.7	Converter transformer saturation.....	38
5.4.8	Harmonic interaction across the converter.....	39
5.4.9	Back-to-back systems	39
5.5	Externally generated harmonics	39
6	Filter arrangements	40
6.1	Overview	40
6.2	Advantages and disadvantages of typical filters.....	41
6.3	Classification of filter types	41
6.4	Tuned filters.....	42
6.4.1	Single tuned filters	42
6.4.2	Double tuned filters.....	43
6.4.3	Triple tuned filters	45
6.5	Damped filters	46
6.5.1	Single tuned damped filters.....	46
6.5.2	Double tuned damped filters.....	49
6.6	Choice of filters.....	49
7	Filter performance calculation.....	50
7.1	Calculation procedure.....	50
7.1.1	General	50
7.1.2	Input data	51
7.1.3	Methodology.....	51
7.1.4	Calculation of converter harmonic currents.....	52
7.1.5	Selection of filter types and calculation of their impedances	52
7.1.6	Calculation of performance	53
7.2	Detuning and tolerances	54
7.2.1	General	54
7.2.2	Detuning factors	54
7.2.3	Resistance variations.....	55
7.2.4	Modelling.....	55
7.3	Network impedance for performance calculations	56
7.3.1	General	56
7.3.2	Network modelling using impedance envelopes.....	57
7.3.3	Sector diagram	58
7.3.4	Circle diagram	59
7.3.5	Discrete polygons	59
7.3.6	Zero-sequence impedance modelling	61
7.3.7	Detailed modelling of AC network for performance calculation	61
7.4	Outages of filter banks and sub-banks.....	62
7.5	Considerations of probability	63
7.6	Flexibility regarding compliance	65
7.7	Ratings of the harmonic filter equipment.....	65
8	Filter switching and reactive power management	65

8.1	General	65
8.2	Reactive power interchange with AC network	66
8.2.1	General	66
8.2.2	Impact on reactive compensation and filter equipment	66
8.2.3	Evaluation of reactive power interchange	67
8.3	HVDC converter reactive power capability	67
8.4	Bank/sub-bank definitions and sizing	67
8.4.1	General	67
8.4.2	Sizing	68
8.5	Hysteresis in switching points	70
8.6	Converter Q-V control near switching points	71
8.7	Operation at increased converter control angles	71
8.8	Filter switching sequence and harmonic performance	71
8.9	Demarcation of responsibilities	72
8.9.1	General	72
8.9.2	Customer	72
8.9.3	Contractor	73
9	Customer specified parameters and requirements	73
9.1	General	73
9.2	AC system parameters	73
9.2.1	Voltage	73
9.2.2	Voltage unbalance	74
9.2.3	Frequency	74
9.2.4	Short circuit level	74
9.2.5	Filter switching	75
9.2.6	Reactive power interchange	75
9.2.7	System harmonic impedance	75
9.2.8	Zero sequence data	75
9.2.9	System earthing	75
9.2.10	Insulation level	75
9.2.11	Creepage distances	75
9.2.12	Pre-existing voltage distortion	75
9.3	Harmonic distortion requirements	76
9.3.1	General	76
9.3.2	Redundancy requirements	76
9.4	Environmental conditions	76
9.4.1	Temperature	76
9.4.2	Pollution	76
9.4.3	Wind	77
9.4.4	Ice and snow loading (if applicable)	77
9.4.5	Solar radiation	77
9.4.6	Isokeraunic levels	77
9.4.7	Seismic requirements	77
9.4.8	Audible noise	77
9.5	Electrical environment	77
9.6	Requirements for filter arrangements and components	78
9.6.1	Filter arrangements	78
9.6.2	Filter capacitors	78
9.6.3	Test requirements	78

9.7	Protection of filters	78
9.8	Loss evaluation	78
9.9	Field measurements and verifications	78
9.10	General requirements	79
10	Future developments	79
10.1	General	79
10.2	New filter technology	79
10.2.1	General	79
10.2.2	Automatically tuned reactors	80
10.2.3	Single-phase redundancy	82
10.2.4	Fuseless capacitors	83
10.2.5	Active filters	84
10.2.6	Compact design	85
10.2.7	Other filter circuit components	86
10.3	New converter technology	87
10.3.1	General	87
10.3.2	Series commutated converters	87
10.3.3	PWM voltage-sourced converters	88
10.3.4	Transformerless converters	90
10.3.5	Unit connection	91
10.4	Changing external environment	91
10.4.1	Increased pre-existing levels of harmonic distortion	91
10.4.2	Developments in communication technology	92
10.4.3	Changes in structure of the power supply industry	92
10.4.4	Focus on power quality	93
Annex A (informative)	Alternative type of procurement procedure	94
Annex B (informative)	Formulae for calculating the characteristic harmonics of a bridge converter	95
Annex C (informative)	Definition of telephone interference parameters	97
C.1	General	97
C.2	Criteria according to European practice	97
C.3	Criteria according to North American practice	98
C.4	Discussion	99
Annex D (informative)	Equivalent frequency deviation	101
Annex E (informative)	Reactive power management	102
E.1	HVDC converter reactive power capability	102
E.1.1	Steady-state capability	102
E.1.2	Temporary capability	104
E.2	Converter Q-V control near switching points	105
E.3	Step-change in voltage on switching a filter	106
Annex F (informative)	Voltage sourced converters	108
F.1	General	108
F.2	Two-level converter with PWM	108
F.3	Three-level converter with PWM	110
F.4	Multi-level converters	111
F.5	Modelling of VSCs for harmonic filtering purposes	112
Bibliography	114

INTERNATIONAL ELECTROTECHNICAL COMMISSION

HIGH-VOLTAGE DIRECT CURRENT (HVDC) SYSTEMS – GUIDANCE TO THE SPECIFICATION AND DESIGN EVALUATION OF AC FILTERS –

Part 1: Overview

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

The main task of IEC technical committees is to prepare International Standards. However, a technical committee may propose the publication of a Technical Report when it has collected data of a different kind from that which is normally published as an International Standard, for example "state of the art".

IEC TR 62001-1, which is a Technical Report, has been prepared by subcommittee 22F: Power electronics for electrical transmission and distribution systems, of IEC technical committee 22: Power electronic systems and equipment.

This first edition of IEC TR 62001-1, together with IEC TR 62001-2¹, IEC TR 62001-3¹ and IEC TR 62001-4, cancels and replaces IEC TR 62001 published in 2009. This edition constitutes a technical revision.

¹ To be published.

IEC TR 62001-1 includes the following significant technical changes with respect to IEC TR 62001:

- a) Clauses 3 to 5, 7 to 9, 17, 20, Annexes A and C to E have been expanded and supplemented;
- b) Annexes C and F on the definition of telephone interference parameters and voltage sourced converters have been added.

The text of this document is based on the following documents:

Enquiry draft	Report on voting
22F/378/DTR	22F/384A/RVC

Full information on the voting for the approval of this document can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC TR 62001 series, published under the general title *High-voltage direct current (HVDC) systems – Guidance to the specification and design evaluation of AC filters*, can be found on the IEC website.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INTRODUCTION

IEC TR 62001 is structured in four parts:

Part 1 – Overview

This part concerns specifications of AC filters for high-voltage direct current (HVDC) systems with line-commutated converters, permissible distortion limits, harmonic generation, filter arrangements, filter performance calculation, filter switching and reactive power management and customer specified parameters and requirements.

Part 2 – Performance

This part deals with current-based interference criteria, design issues and special applications, field measurements and verification.

Part 3 – Modelling

This part addresses the harmonic interaction across converters, pre-existing harmonics, AC network impedance modelling, simulation of AC filter performance.

Part 4 – Equipment

This part concerns steady-state and transient ratings of AC filters and their components, power losses, audible noise, design issues and special applications, filter protection, seismic requirements, equipment design and test parameters.

HIGH-VOLTAGE DIRECT CURRENT (HVDC) SYSTEMS – GUIDANCE TO THE SPECIFICATION AND DESIGN EVALUATION OF AC FILTERS –

Part 1: Overview

1 Scope

This part of IEC TR 62001, which is a Technical Report, provides guidance on the specifications of AC filters for high-voltage direct current (HVDC) systems with line-commutated converters and filter performance calculation.

This document deals with the specification and design evaluation of AC side harmonic performance and AC side filters for HVDC schemes. It is intended to be primarily for the use of the utilities and consultants who are responsible for issuing the specifications for new HVDC projects and evaluating designs proposed by prospective suppliers.

The scope of this document covers AC side filtering for the frequency range of interest in terms of harmonic distortion and audible frequency disturbances. It excludes filters designed to be effective in the Power Line Carrier (PLC) and radio interference spectra.

The bulk of this document concentrates on the "conventional" AC filter technology and line-commutated HVDC converters. The changes entailed by new technologies are also discussed.
