CONTENTS

FOREWORD.....	4
INTRODUCTION.....	6
1 Scope.....	7
2 Normative references.....	7
3 Terms and definitions.....	7
4 Risk groups applied for optical radiation safety assessments.....	10
4.1 Basis for optical radiation safety classification.....	10
4.2 Assessment criteria.....	10
4.3 Application-related issues.....	10
4.3.1 Near-infrared sources.....	10
4.3.2 “Point sources”.....	11
4.3.3 Application-related vertical standards.....	11
5 Guidelines for lamp and lamp system manufacturers on how to apply IEC 62471.....	11
5.1 Limit values.....	11
5.1.1 General.....	11
5.1.2 Limits provided in irradiance/radiant exposure.....	12
5.1.3 Limits provided in (time integrated) radiance.....	12
5.2 Guidelines for lamp/LED manufacturers.....	12
5.2.1 General.....	12
5.2.2 Measurement conditions.....	12
5.2.3 User information.....	13
5.3 Guidelines for lamp system/luminaire manufacturers.....	13
5.3.1 General.....	13
5.3.2 Sources for general lighting service (GLS).....	13
5.3.3 Multi-purpose lamps.....	14
5.3.4 Determination of the hazard distance.....	14
5.4 Labelling.....	15
5.5 Other information provisions.....	16
6 Allocation of safety measures.....	17
6.1 General.....	17
6.2 Maximum acceptable viewer-related risk.....	18
Annex A (informative) Radiance and ocular hazards from extended sources.....	20
Annex B (informative) Determination of hazard distances.....	26
Annex C (informative) Sources for general lighting service (GLS).....	36
Annex D (informative) Lamps and lamp systems with integrated, attached beam-shaping or projection optics.....	41
Bibliography.....	45
Figure 1 – Example of graphic presentation of distant dependent emission hazard values.....	15
Figure 2 – Example of warning label for a lamp with multiple hazard spectral regions.....	17
Figure A.1 – Invariance of radiance with distance from an extended source.....	21
Figure A.2 – Usual measurement conditions for the determination of radiance and time integrated radiance.....	22

Figure A.3a – Source size larger than the FOV (overfilled).....	23
Figure A.3b – Source size smaller than the FOV (under-filled)	23
Figure A.3 – Source sizes	23
Figure A.4 – $B(\lambda)$ -weighted radiance distribution of a state-of-the-art “pc-white” LED component.....	24
Figure B.1 – Normalized correlation between radiance L and corresponding irradiance E for varying values of source diameter and distance	27
Figure B.2 – Direct intra-beam viewing of an arc searchlight showing a magnification of the actual arc.....	29
Figure B.3 – Calculated flash distance of LEDs depending on the individual half intensity angle θ of the spatial emission.....	30
Figure B.4 – Actinic UV-related safe use conditions for the example radiator	32
Figure B.5 – Distance-dependant (spectrally weighted) Exempt Risk Group limits for the spatially averaged radiance of a halogen lamp of 7 mm source size.....	34
Figure C.1 – Measured spatially averaged radiance.....	37
Figure C.2 – Relationships between illuminance of 500 lux and source luminance [cd/m^2] (indicated) for several source sizes and distances of some typical luminances.....	38
Figure D.1 – Ultraviolet and infrared filtering by projection optics.....	41
Figure D.2 – Magnified apparent source size of the filament in an incandescent projection lamp	42
Figure D.3 – Examples of projection optics	42
Figure D.4 – Formation of a virtual LED chip image by the integrated lens.....	43
Figure D.5 – Imaging of the apparent source and measurement condition for the assessment of sources with built-in or attached projection optics.....	43
Table 1 – Hazard-related risk group labelling of lamp systems.....	16
Table 2 – Explanation of labelling information and guidance on control measures.....	17
Table 3 – Maximum acceptable risk group of products assessed for viewer-related risk under application specific conditions	19
Table B.1 – Spatially averaged radiance	35
Table C.1 – Risk group-related inverse square law and hazard distances	37
Table C.2 – Risk group-related hazard distances (in m) for halogen lamp of 7 mm source diameter and with luminance of $3 \times 10^7 \text{ cd}\cdot\text{m}^{-2}$	39

INTERNATIONAL ELECTROTECHNICAL COMMISSION

PHOTOBIOLOGICAL SAFETY OF LAMPS AND LAMP SYSTEMS –

**Part 2: Guidance on manufacturing requirements
relating to non-laser optical radiation safety**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC provides no marking procedure to indicate its approval and cannot be rendered responsible for any equipment declared to be in conformity with an IEC Publication.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

The main task of IEC technical committees is to prepare International Standards. However, a technical committee may propose the publication of a technical report when it has collected data of a different kind from that which is normally published as an International Standard, for example "state of the art".

IEC 62471-2, which is a technical report, has been prepared by Technical Committee 76: Optical radiation safety and laser equipment

The text of this technical report is based on the following documents:

Enquiry draft	Report on voting
76/396/DTR	76/410/RVC

Full information on the voting for the approval of this technical report can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts of the IEC 62471 series, published under the general title *Photobiological safety of lamps and lamp systems*, can be found on the IEC website.

The committee has decided that the contents of this publication will remain unchanged until the maintenance result date indicated on the IEC web site under "http://webstore.iec.ch" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The “colour inside” logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this publication using a colour printer.

INTRODUCTION

Optical radiation hazards from all types of lamps or other broadband light sources are assessed by the application of IEC 62471:2006 (Edition 1), *Photobiological safety of lamps and lamp systems*. IEC 62471 covers LEDs as well as incandescent, low and high pressure gas-discharge, arc and other lamps. It also covers electrically-powered optical radiation sources that are not lamps. The standard provides a risk group classification system for all lamps and lamp systems, and the measurement conditions are well developed. IEC 62471 does not include manufacturing or user safety requirements that may be required as a result of a lamp or lamp system being assigned to a particular risk group. The safety requirements for lamp systems necessarily vary and are best dealt with in vertical standards. This Part 2 provides the basis for safety requirements dependent upon risk group classification and examples thereof. The assigned risk group of a product may be used to assist with risk assessments, e.g. for occupational exposure in workplaces. National requirements may exist for the assessment of products or occupational exposure.

NOTE 1 There are some instances where the IEC 60825 laser product standards may be useful for a nearly "point" source, as in an LED fibre source or a superluminescent diode (see 3.16).

NOTE 2 IEC 62471 is currently being revised and will be published as IEC 62471-1.

PHOTOBIOLOGICAL SAFETY OF LAMPS AND LAMP SYSTEMS –

Part 2: Guidance on manufacturing requirements relating to non-laser optical radiation safety

1 Scope

This technical report provides the basis for optical radiation safety requirements of non-laser products, serving as a guide for development of safety requirements in vertical product standards and assisting lamp system manufacturers in the interpretation of safety information provided by the lamp manufacturers.

This report provides guidance on:

- requirements for optical radiation safety assessment;
- allocation of safety measures;
- labelling of products.

This technical report does not address safety requirements of intentional exposure to optical radiation from sun tanning equipment, ophthalmic instruments or other medical/cosmetic devices whose specific safety issues are addressed through appropriate standards.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 62471, *Photobiological safety of lamps and lamp systems*
