# CONTENTS

FC	DREWORD	)	5
1	Scope		7
2	Normati	ve references	7
3	Industry	needs and business benefits	7
	3.1 Inc	dustry needs	7
	3.2 Bu	isiness benefits	8
4	Material	declaration approach and flexibility of IEC 62474	9
	4.1 Ma	aterial declaration approach	9
	4.1.1	General	9
	4.1.2	Guidance on use of conditional fields in the developers table	10
	4.1.3	Guidance on use of mass and mass percent fields	11
	4.1.4	Calculating mass percent	11
	4.1.5	Interpretation of reporting threshold for declarable substances and declarable substance groups	12
	4.1.6	Guidance on declaring a substance that belongs to two different substance groups	12
	4.2 Fle	exibility of IEC 62474	13
	4.2.1	Overview of material declaration features	13
	4.2.2	Flexibility of declaring substances and substance groups at different levels within the declaration	13
	4.2.3	Declarable substances in a material declaration	13
	4.2.4	Additional guidance on declaration of material classes	14
	4.2.5	Absence declaration	15
	4.2.6	Material names	15
	4.2.7	Use of the query list features	16
	4.2.8	Decláring exemptions	16
	4.2.9	Using the reporting Threshold, above Threshold Level and the reportable Application fields	18
	4.2.10	How to declare a product that does not have a fixed mass	19
5	Material	declaration examples	19
	5.1 Ge	eneral	19
	5.2 Ex	ample 1 – An electronic component	19
	5.2.1	General	19
	5.2.2	Material declaration reporting "base data requirements"	21
	5.2.3	Material declaration reporting base data requirements with optional	
		information for RoHS substances	22
	5.2.4	Material declaration reporting additional information for 100 percent of the product composition	25
	5.2.5	Material declaration reporting additional information with one undeclared substance	31
	5.3 Ex	ample 2 – A product family of capacitors	38
	5.3.1	General	38
	5.3.2	Reporting material declaration according to "base data requirements"	38
	5.3.3	Material declaration reporting additional information for 100 percent of the product composition	41
	5.4 Ex	ample 3 – An assembly consisting of a circuit board and a battery	44
	5.4.1	General	44

### INTERNATIONAL ELECTROTECHNICAL COMMISSION

# MATERIAL DECLARATION FOR PRODUCTS OF AND FOR THE ELECTROTECHNICAL INDUSTRY –

#### Part 1: Guidance for the implementation of IEC 62474

#### FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC on its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

The main task of IEC technical committees is to prepare International Standards. However, a technical committee may propose the publication of a Technical Report when it has collected data of a different kind from that which is normally published as an International Standard, for example "state of the art".

IEC TR 62474-1, which is a Technical Report, has been prepared by IEC technical committee 111: Environmental standardization for electrical and electronic products and systems.

The text of this Technical Report is based on the following documents:

Enquiry draft	Report on voting
111/359/DTR	111/369/RVC

Full information on the voting for the approval of this Technical Report can be found in the report on voting indicated in the above table.

- 6 -

IEC TR 62474-1:2015 © IEC 2015

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC 62474 series, published under the general title *Material declaration for products of and for the electrotechnical industry*, can be found on the IEC website.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC website under "http://webstore.iec.ch" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

# MATERIAL DECLARATION FOR PRODUCTS OF AND FOR THE ELECTROTECHNICAL INDUSTRY –

# Part 1: Guidance for the implementation of IEC 62474

#### 1 Scope

This part of IEC 62474, which is a Technical Report, is a guidance document to help organizations that create tools for material data exchange and organizations that submit and receive material declarations to properly implement IEC 62474.

IEC 62474 specifies the procedure, content, and form relating to material declarations for products of companies operating in and supplying the electrotechnical industry.

This Technical Report:

- illustrates the flexibility and functionality of IEC 62474 using examples,
- supports organizations that create software to exchange substance and material data,
- supports users that submit and receive material declarations, and
- is designed to support consistent implementation of IEC \$2474.

Clause 3 summarizes industry needs for material information and business benefits related to IEC 62474.

Clause 4 provides case studies that describe the functionality of IEC 62474.

Clause 5 provides detailed representations and XML files for the material declaration case studies included in Clause 4.

## 2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
