Stencils for duplicators — Minimum overprint and attachment features

Stencils pour duplicateurs — Impressions minimales et dispositifs d'accochage

Second edition - 1976-08-15

Descriptors: office machines, stencils, specifications, layout, dimensions.

FOREWORD

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO Member Bodies). The work of developing International Standards is carried out through ISO Technical Committees. Every Member Body interested in a subject for which a Technical Committee has been set up has the right to be represented on that Committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the Technical Committees are circulated to the Member Bodies for approval before their acceptance as International Standards by the ISO council.

International Standard ISO 2133 was drawn up by Technical Committee ISO/TC 95, Office machines. This second edition was circulated to the Member Bodies in March 1975.

It has been approved by the Member Bodies of the following countries:

Bulgaria Ireland United Kingdom Czechoslovakia Italy U.S.S.R.
France Romania Yugoslavia Germany Sweden Turkey

The Member Bodies of the following countries expressed disapproval of the document on technical grounds:

Japan V.S.A.

This second edition cancels and replaces the first edition (i.e. ISO 2133-1972).

Stencils for duplicators — Minimum overprint and attachment features

1 SCOPE AND FIELD OF APPLICATION

This International Standard specifies the dimensions of the working area of duplicating stencils intended for use with paper of sizes up to and including A4 (210 mm × 297 mm). Overprint for stencils intended for use with paper in excess of A4 size is not covered, although it is recognized that, in countries which have not adopted the relevant ISO publications¹⁾, such stencils will be widely used.

This International Standard also lays down:

- the minimum information to be printed on the face of the stencil and the preferred information relating to markings for the A series of paper sizes. These requirements as applied to the A sizes are illustrated in figure 1:
- the attachment features of stencils. These requirements, which are identical to those specified for offset plates in ISO 2132, Offset duplicators Attachment features of plates, are illustrated in figure 2.

¹⁾ For example, ISO 216, Writing paper and certain classes of printed matter - Trimmed sizes - A and B series.
