## CONTENTS

FOREWORD .....	5
INTRODUCTION .....	7
1 Scope .....	8
2 Normative references .....	8
3 Terms and definitions .....	11
4 Common features and typical connector pair .....	13
4.1 View showing typical fixed and free connectors (see Figure 2) .....	13
4.2 Mating information .....	13
4.2.1 General .....	13
4.2.2 Contacts – mating conditions .....	14
4.2.3 Fixed connector .....	17
4.2.4 Free connector .....	23
5 Cable terminations and internal connections – Fixed and free connectors .....	26
5.1 General .....	26
5.2 Termination types .....	27
5.2.1 Solder terminations .....	27
5.2.2 Solderless terminations .....	27
6 Gauges .....	27
6.1 Fixed connectors .....	27
6.2 Free connectors .....	33
7 Characteristics .....	38
7.1 General .....	38
7.2 Pin and pair grouping assignment .....	38
7.3 Classification into climatic category .....	38
7.4 Electrical characteristics .....	39
7.4.1 Creepage and clearance distances .....	39
7.4.2 Voltage proof .....	39
7.4.3 Current-temperature derating .....	39
7.4.4 Interface contact resistance – initial only .....	40
7.4.5 Input to output DC resistance .....	40
7.4.6 Input-to-output DC resistance unbalance .....	40
7.4.7 Initial insulation resistance .....	41
7.4.8 Transfer impedance .....	41
7.5 Transmission characteristics .....	41
7.6 Mechanical characteristics .....	41
7.6.1 Mechanical operation .....	41
7.6.2 Effectiveness of connector coupling devices .....	41
7.6.3 Insertion and withdrawal forces .....	41
8 Tests and test schedule .....	41
8.1 General .....	41
8.2 Arrangement for interface contact resistance test .....	42
8.3 Arrangement for vibration test (test phase CP1) .....	44
8.4 Test procedures and measuring methods .....	45
8.5 Preconditioning .....	45
8.6 Wiring and mounting of specimens .....	46

8.6.1	Wiring .....	46
8.6.2	Mounting .....	46
8.7	Test schedules.....	46
8.7.1	General .....	46
8.7.2	Basic (minimum) test schedule .....	46
8.7.3	Full test schedule .....	46
Annex A (normative)	Gauging continuity procedure.....	58
A.1	Object.....	58
A.2	Preparation of the specimens.....	58
A.3	Test method.....	58
A.4	Final measurements.....	58
A.5	Description of the continuity gauge .....	58
Annex B (normative)	Locking device mechanical operation .....	62
B.1	Object.....	62
B.2	Preparation of the specimens.....	62
B.3	Test method.....	62
B.4	Final measurements.....	62
Annex C (normative)	Gauge requirements .....	63
C.1	Fixed connectors .....	63
C.2	Free connectors .....	63
Annex D (normative)	Keystone connector information .....	64
D.1	Fixed connector, female contacts Keystone type – Type A, variant 03 in the previous edition of this standard .....	64
D.2	Mounting dimensions for type A, Keystone type variant 03.....	65
Annex E (normative)	Levels of compatibility.....	67
E.1	General.....	67
E.2	Intermountability .....	68
E.3	Intermateability .....	69
E.4	Intermountability and intermateability.....	69
E.5	Interoperability .....	70
E.6	Interchangeability .....	70
E.7	Backward compatibility .....	70

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

### CONNECTORS FOR ELECTRONIC EQUIPMENT –

#### Part 7: Detail specification for 8-way, unshielded, free and fixed connectors

#### FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

**This redline version of the official IEC Standard allows the user to identify the changes made to the previous edition. A vertical bar appears in the margin wherever a change has been made. Additions are in green text, deletions are in strikethrough red text.**

International Standard IEC 60603-7 has been prepared by subcommittee 48B: Electrical connectors, of IEC technical committee 48: Electrical connectors and mechanical structures for electrical and electronic equipment.

This fourth edition cancels and replaces the third edition, published in 2008, its Amendment 1:2011 and its Amendment 2:2019. It constitutes a technical revision.

This edition includes the following significant technical change with respect to the previous edition:

- Revised the definitions for intermateability and interoperability; added new definitions.
- Corrected dimension line for dimension AZ2 in Figure 5.
- Corrected dimension line for dimension F1 in Figure A.1.
- Revised the reference to ISO/IEC 11801 to ISO/IEC 11801-1.
- Added lower limiting temperature and upper limiting temperature definitions.
- Revised Table 1 to Table 8 so the column order is Minimum-Nominal-Maximum dimensions (ascending order).
- Corrected Table 7: Climatic category and Upper temperature values to 90 °C (to be consistent with the graph in Figure 10 and Note 1 in Figure 10).
- Revised the wording in 8.2, contact resistance, for clarification.
- Revised Figure 11 and Figure 12 and the wording in the Key below for clarification.
- Removed the sentences under the figure in the Introduction.
- Added Annex E.

The text of this International Standard is based on the following documents:

FDIS	Report on voting
48B/2832/FDIS	8B/2843/RVD

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts of IEC 60603-7 series, under the general title *Connectors for electronic equipment*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

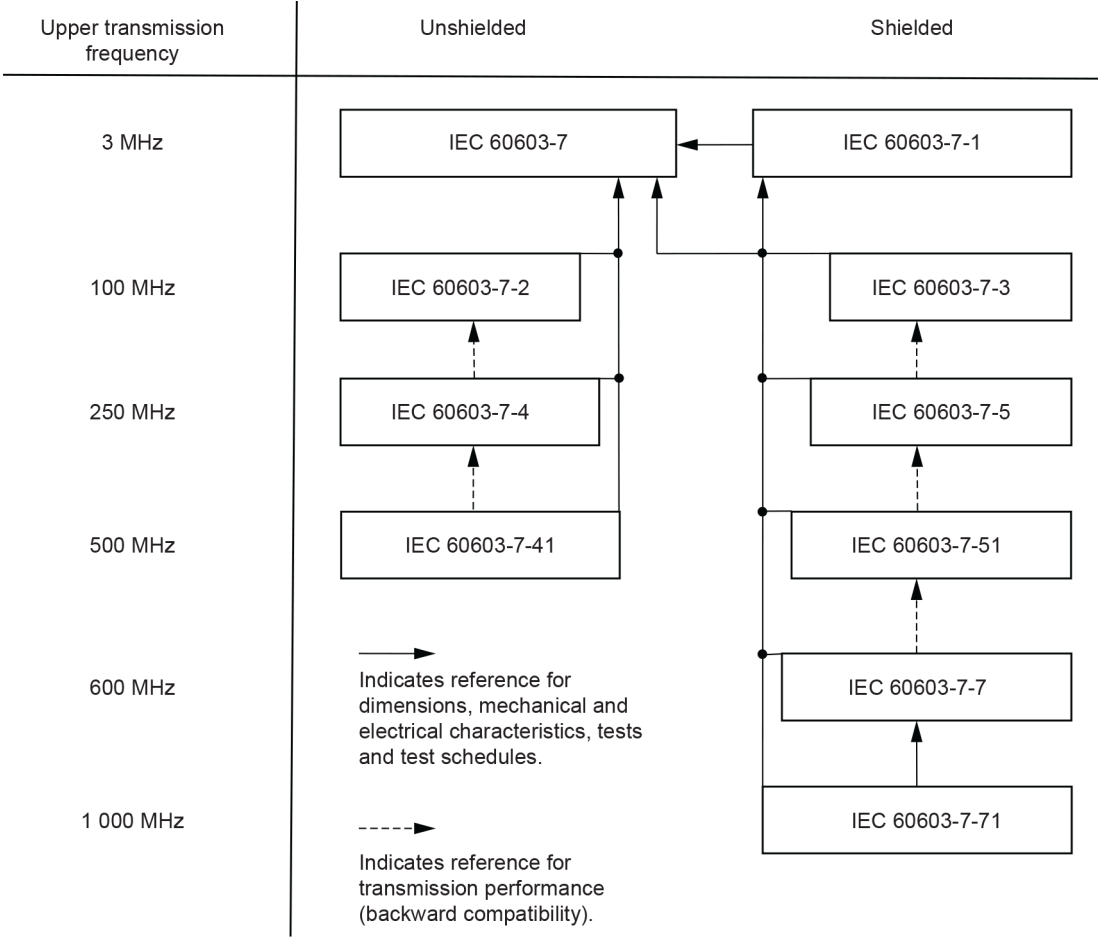

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

**IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**

### INTRODUCTION

IEC 60603-7 is the base specification of the whole series. Subsequent specifications do not duplicate information given in the base document, but list only additional requirements. For complete specifications regarding a component of a higher numbered document, all lower numbered documents must be considered as well. Figure 1 shows the interrelation of the documents.

~~It should be noted that during the preparation of the third edition of IEC 60603-7, the subcommittee 48B Cat 6&7 project team members determined the current de-rating curve in the standard was not correct. Several experts researched the current rating temperature rise measurements for 60603-7 style connectors and verified that the de-rating curve in the published standard has been incorrect for many years. A corrected figure (Figure 10) has been prepared and inserted in this edition.~~

## CONNECTORS FOR ELECTRONIC EQUIPMENT –

### Part 7: Detail specification for 8-way, unshielded, free and fixed connectors

#### ~~1~~ **General**

##### **1 Scope**

This part of IEC 60603-7 covers 8-way, unshielded, free and fixed connectors and is intended to specify the common dimensions (*interface dimensions*), mechanical, electrical and environmental characteristics and tests for the family of IEC 60603-7-x connectors.

These connectors are intermateable (according to IEC 61076-1 level 2) and interoperable with other IEC 60603-7 series connectors.

##### **2 Normative references**

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. ## INTERNATIONAL ELECTROTECHNICAL COMMISSION

### CONNECTORS FOR ELECTRONIC EQUIPMENT –

#### Part 7: Detail specification for 8-way, unshielded, free and fixed connectors

#### FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 60603-7 has been prepared by subcommittee 48B: Electrical connectors, of IEC technical committee 48: Electrical connectors and mechanical structures for electrical and electronic equipment.

This fourth edition cancels and replaces the third edition, published in 2008, its Amendment 1:2011 and its Amendment 2:2019. It constitutes a technical revision.

This edition includes the following significant technical change with respect to the previous edition:

- Revised the definitions for intermateability and interoperability; added new definitions.
- Corrected dimension line for dimension AZ2 in Figure 5.
- Corrected dimension line for dimension F1 in Figure A.1.
- Revised the reference to ISO/IEC 11801 to ISO/IEC 11801-1.

- Added lower limiting temperature and upper limiting temperature definitions.
- Revised Table 1 to Table 8 so the column order is Minimum-Nominal-Maximum dimensions (ascending order).
- Corrected Table 7: Climatic category and Upper temperature values to 90 °C (to be consistent with the graph in Figure 10 and Note 1 in Figure 10).
- Revised the wording in 8.2, contact resistance, for clarification.
- Revised Figure 11 and Figure 12 and the wording in the Key below for clarification.
- Removed the sentences under the figure in the Introduction.
- Added Annex E.

The text of this International Standard is based on the following documents:

FDIS	Report on voting
48B/2832/FDIS	8B/2843/RVD

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts of IEC 60603-7 series, under the general title *Connectors for electronic equipment*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "http://webstore.iec.ch" in the data related to the specific document. At this date, the document will be

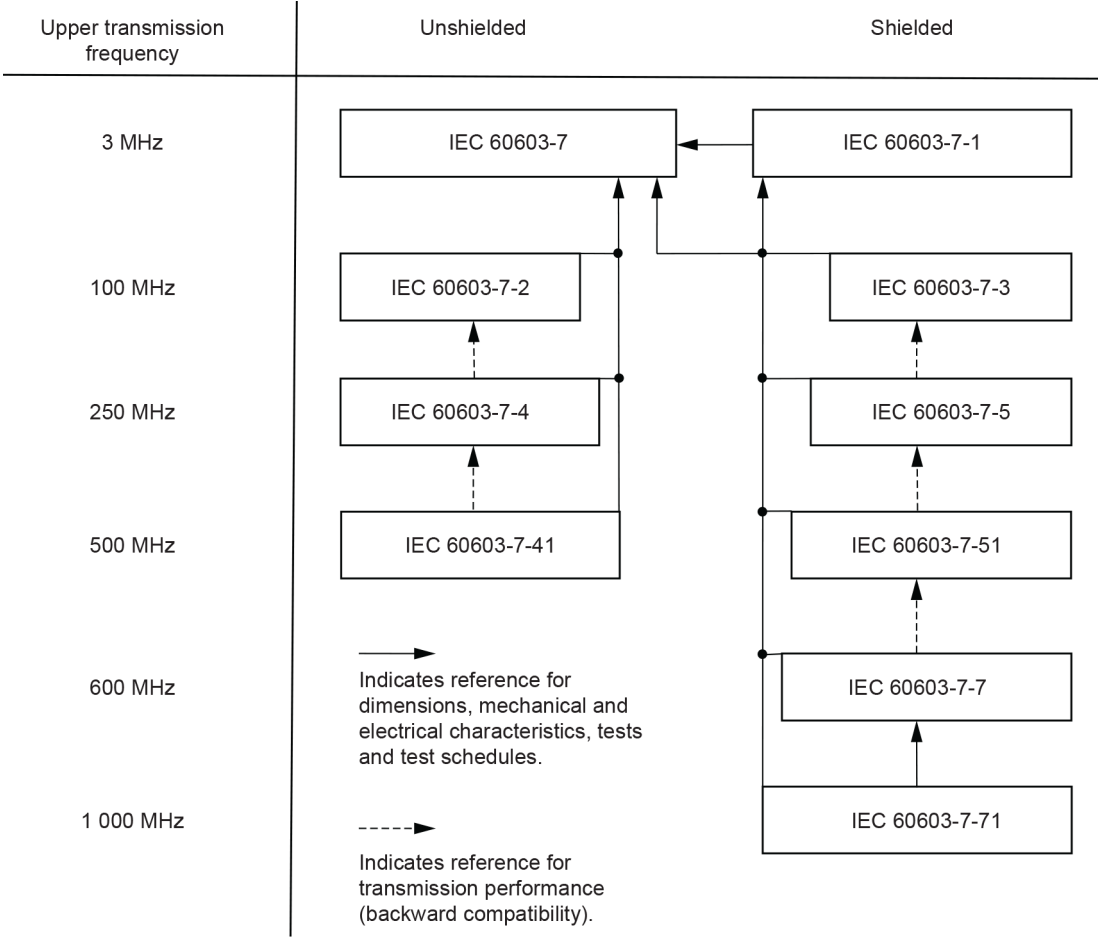

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

**IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**

## INTRODUCTION

IEC 60603-7 is the base specification of the whole series. Subsequent specifications do not duplicate information given in the base document, but list only additional requirements. For complete specifications regarding a component of a higher numbered document, all lower numbered documents must be considered as well. Figure 1 shows the interrelation of the documents.

IEC

**Figure 1 – IEC 60603-7 family document diagram**

## CONNECTORS FOR ELECTRONIC EQUIPMENT –

### Part 7: Detail specification for 8-way, unshielded, free and fixed connectors

#### 1 Scope

This part of IEC 60603-7 covers 8-way, unshielded, free and fixed connectors and is intended to specify the common dimensions (interface dimensions), mechanical, electrical and environmental characteristics and tests for the family of IEC 60603-7-x connectors.

These connectors are intermateable (according to IEC 61076-1 level 2) and interoperable with other IEC 60603-7 series connectors.

#### 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

## COMMISSION ÉLECTROTECHNIQUE INTERNATIONALE

### CONNECTEURS POUR ÉQUIPEMENTS ÉLECTRONIQUES –

#### Partie 7: Spécification particulière pour les fiches et les embases non écrantées à 8 voies

##### AVANT PROPOS

- 1) La Commission Electrotechnique Internationale (IEC) est une organisation mondiale de normalisation composée de l'ensemble des comités électrotechniques nationaux (Comités nationaux de l'IEC). L'IEC a pour objet de favoriser la coopération internationale pour toutes les questions de normalisation dans les domaines de l'électricité et de l'électronique. A cet effet, l'IEC – entre autres activités – publie des Normes internationales, des Spécifications techniques, des Rapports techniques, des Spécifications accessibles au public (PAS) et des Guides (ci-après dénommés "Publication(s) de l'IEC"). Leur élaboration est confiée à des comités d'études, aux travaux desquels tout Comité national intéressé par le sujet traité peut participer. Les organisations internationales, gouvernementales et non gouvernementales, en liaison avec l'IEC, participent également aux travaux. L'IEC collabore étroitement avec l'Organisation Internationale de Normalisation (ISO), selon des conditions fixées par accord entre les deux organisations.
- 2) Les décisions ou accords officiels de l'IEC concernant les questions techniques représentent, dans la mesure du possible, un accord international sur les sujets étudiés, étant donné que les Comités nationaux de l'IEC intéressés sont représentés dans chaque comité d'études.
- 3) Les Publications de l'IEC se présentent sous la forme de recommandations internationales et sont agréées comme telles par les Comités nationaux de l'IEC. Tous les efforts raisonnables sont entrepris afin que l'IEC s'assure de l'exactitude du contenu technique de ses publications; l'IEC ne peut pas être tenue responsable de l'éventuelle mauvaise utilisation ou interprétation qui en est faite par un quelconque utilisateur final.
- 4) Dans le but d'encourager l'uniformité internationale, les Comités nationaux de l'IEC s'engagent, dans toute la mesure possible, à appliquer de façon transparente les Publications de l'IEC dans leurs publications nationales et régionales. Toutes divergences entre toutes Publications de l'IEC et toutes publications nationales ou régionales correspondantes doivent être indiquées en termes clairs dans ces dernières.
- 5) L'IEC elle-même ne fournit aucune attestation de conformité. Des organismes de certification indépendants fournissent des services d'évaluation de conformité et, dans certains secteurs, accèdent aux marques de conformité de l'IEC. L'IEC n'est responsable d'aucun des services effectués par les organismes de certification indépendants.
- 6) Tous les utilisateurs doivent s'assurer qu'ils sont en possession de la dernière édition de cette publication.
- 7) Aucune responsabilité ne doit être imputée à l'IEC, à ses administrateurs, employés, auxiliaires ou mandataires, y compris ses experts particuliers et les membres de ses comités d'études et des Comités nationaux de l'IEC, pour tout préjudice causé en cas de dommages corporels et matériels, ou de tout autre dommage de quelque nature que ce soit, directe ou indirecte, ou pour supporter les coûts (y compris les frais de justice) et les dépenses découlant de la publication ou de l'utilisation de cette Publication de l'IEC ou de toute autre Publication de l'IEC, ou au crédit qui lui est accordé.
- 8) L'attention est attirée sur les références normatives citées dans cette publication. L'utilisation de publications référencées est obligatoire pour une application correcte de la présente publication.
- 9) L'attention est attirée sur le fait que certains des éléments de la présente Publication de l'IEC peuvent faire l'objet de droits de brevet. L'IEC ne saurait être tenue pour responsable de ne pas avoir identifié de tels droits de brevets et de ne pas avoir signalé leur existence.

La Norme internationale IEC 60603-7 a été établie par le sous-comité 48B: Connecteurs électriques, du comité d'études 48 de l'IEC: Connecteurs électriques et structures mécaniques pour les équipements électriques et électroniques.

Cette quatrième édition annule et remplace la troisième édition publiée en 2008, l'Amendement 1:2011 et l'Amendement 2:2019. Cette édition constitue une révision technique.

Cette édition inclut les modifications techniques majeures suivantes par rapport à la précédente édition:

- Révision des définitions de la compatibilité d'accouplement et de l'interopérabilité; ajout de nouvelles définitions.
- Correction de la ligne de cote AZ2 à la Figure 5.

- Correction de la ligne de cote F1 à la Figure A.1.
- Révision de la référence à l'ISO/IEC 11801, devenant ISO/IEC 11801-1.
- Ajout des définitions de la température limite inférieure et de la température limite supérieure.
- Révision des Tableau 1 à Tableau 8 de sorte que l'ordre des colonnes corresponde à l'ordre croissant des valeurs, soit "Minimales", "Nominales", "Maximales".
- correction du Tableau 7: correction de la colonne "Catégorie climatique" et de la colonne "Température supérieure", qui spécifie désormais une valeur de 90 °C (à des fins de cohérence avec le graphique de la Figure 10 et la Note 1 de la Figure 10).
- Révision, à des fins de clarification, de la formulation en 8.2, Disposition pour l'essai de la résistance de contact.
- Révision de la Figure 11 et de la Figure 12, et de la formulation dans les légendes correspondantes, à des fins de clarification.
- Suppression des phrases présentes sous la figure, dans l'Introduction.
- Ajout de l'Annexe E.

Le texte de cette Norme internationale est issu des documents suivants:

FDIS	Rapport de vote
48B/2832/FDIS	8B/2843/RVD

Le rapport de vote indiqué dans le tableau ci-dessus donne toute information sur le vote ayant abouti à l'approbation de cette Norme internationale.

Ce document a été rédigé selon les Directives ISO/IEC, Partie 2.

Une liste de toutes les parties de la série IEC 60603-7, sous le titre général *Connecteurs pour équipements électroniques*, est disponible sur le site web de l'IEC.

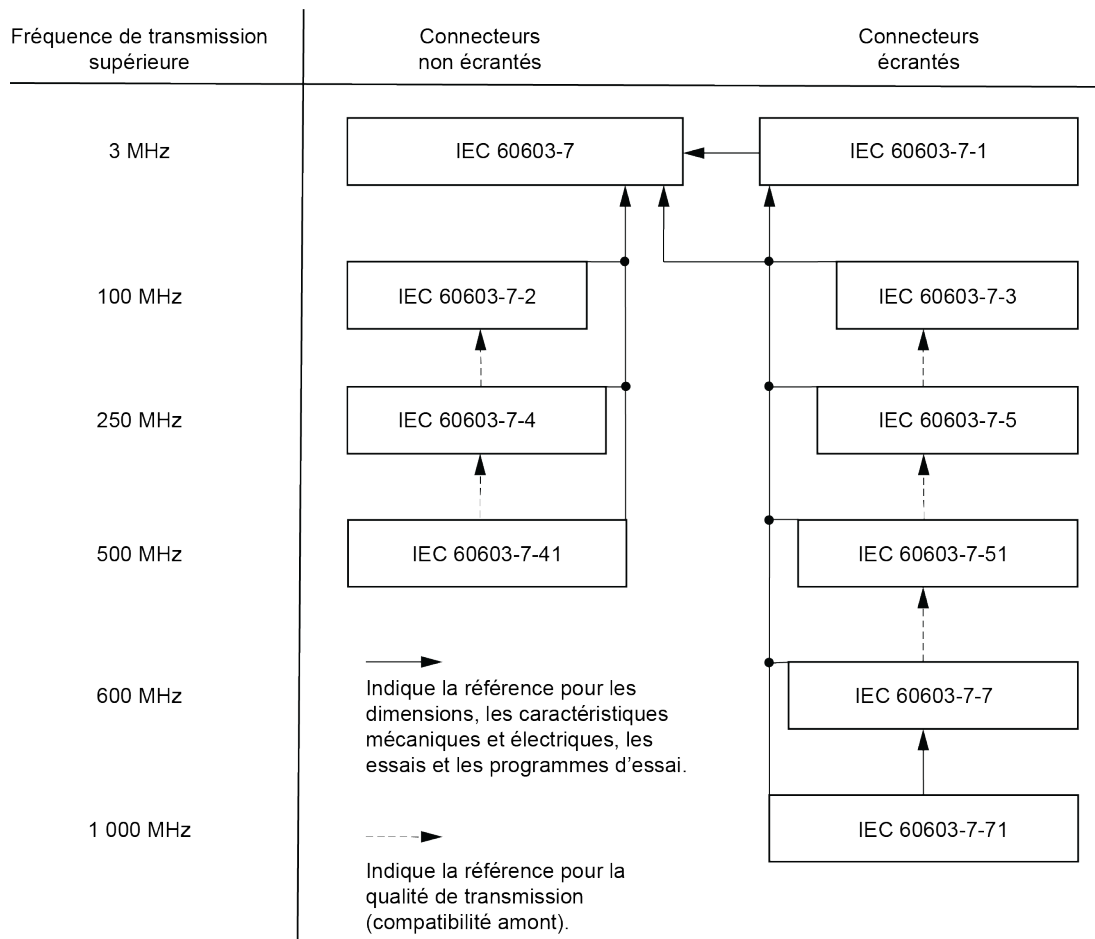

Le comité a décidé que le contenu de ce document ne sera pas modifié avant la date de stabilité indiquée sur le site web de l'IEC sous "<http://webstore.iec.ch>" dans les données relatives à la publication recherchée. A cette date, le document sera

- reconduit,
- supprimé,
- remplacé par une édition révisée, ou
- amendé.

**IMPORTANT – Le logo "colour inside" qui se trouve sur la page de couverture de cette publication indique qu'elle contient des couleurs qui sont considérées comme utiles à une bonne compréhension de son contenu. Les utilisateurs devraient, par conséquent, imprimer cette publication en utilisant une imprimante couleur.**

## INTRODUCTION

L'IEC 60603-7 est la spécification de base pour toute la série. Les spécifications qui en découlent ne redonnent pas les informations fournies dans le document de base mais elles stipulent uniquement les exigences supplémentaires. Pour avoir les spécifications complètes d'un composant donné lorsque le numéro du document est élevé, il faut également prendre en compte tous les documents de numérotation inférieure. La Figure 1 montre l'interrelation des documents.

IEC

## CONNECTEURS POUR ÉQUIPEMENTS ÉLECTRONIQUES –

### Partie 7: Spécification particulière pour les fiches et les embases non écrantées à 8 voies

#### 1 Domaine d'application

La présente partie de l'IEC 60603-7 couvre les fiches et les embases non écrantées à 8 voies; elle est destinée à spécifier les dimensions communes (dimensions de l'interface), les caractéristiques mécaniques, électriques et environnementales ainsi que les essais pour la famille des connecteurs IEC 60603-7-x.

Ces connecteurs sont accouplables (conformes à l'IEC 61076-1 niveau 2) et interopérables avec les autres connecteurs de la série IEC 60603-7.

#### 2 Références normatives

Les documents suivants cités dans le texte constituent, pour tout ou partie de leur contenu, des exigences du présent document. Pour les références datées, seule l'édition citée s'applique. Pour les références non datées, la dernière édition du document de référence s'applique (y compris les éventuels amendements).

IEC 61156-6, *Multicore and symmetrical pair/quad cables for digital communications – Part 6: Symmetrical pair/quad cables with transmission characteristics up to 1 000 MHz – Work area wiring – Sectional specification* (disponible en anglais seulement)

IEC 61156-7, *Câbles multiconducteurs à paires symétriques et quartes pour transmissions numériques – Partie 7: Câbles à paires symétriques avec caractéristiques de transmission jusqu'à 1 200 MHz – Spécification intermédiaire pour câbles de transmissions numériques et analogiques*

IEC 61760-3, *Technique du montage en surface – Partie 3: Méthode normalisée relative à la spécification des composants pour le brasage par refusion à trous traversants (THR, Through Hole Reflow)*

IEC TR 63040, *Guidance on clearances and creepage distances in particular for distances equal to or less than 2 mm – Test results of research on influencing parameters* (disponible en anglais seulement)

ISO/IEC 11801-1, *Information technology – Generic cabling for customer premises – Part 1: General requirements* (disponible en anglais seulement)

ISO 1302, *Spécification géométrique des produits (GPS) – Indication des états de surface dans la documentation technique de produits*

Recommandation UIT-T K.20:2000<sup>1</sup>, *Immunité des équipements de télécommunication des centres de télécommunication aux surtensions et aux surintensités*

Recommandation UIT-T K.44:2000<sup>2</sup>, *Essais d'immunité des équipements de télécommunication exposés aux surtensions et aux surintensités – Recommandation fondamentale*
