CONTENTS

FOREWORD.....	4
1 Scope.....	6
2 Normative references	6
3 Background	6
4 Overview of methods	7
5 Mapping functions	7
6 Reference test method	8
7 Apparatus.....	8
7.1 Light source	8
7.2 Modulation	8
7.3 Launch optics	8
7.4 Support and positioning apparatus	8
7.5 Cladding mode stripper	8
7.6 Deployment mandrel	9
7.6.1 General	9
7.6.2 Cable cut-off wavelength, Method A	9
7.6.3 Cable cut-off wavelength, Method B	9
7.6.4 Fibre cut-off wavelength, Method C	9
7.7 Detection optics	11
7.8 Detector assembly and signal detection electronics.....	11
8 Sampling and specimens.....	11
8.1 Specimen length.....	11
8.2 Specimen end face.....	12
9 Procedure	12
9.1 Positioning of specimen in apparatus	12
9.1.1 General requirements for all methods	12
9.1.2 Deployment requirements for each method.....	12
9.2 Measurement of output power	12
9.2.1 Overview	12
9.2.2 Bend-reference technique.....	13
9.2.3 Multimode-reference technique.....	13
10 Calculations	13
10.1 Bend-reference technique	13
10.2 Multimode-reference technique	14
10.3 Curve-fitting technique for improved precision (optional)	14
10.3.1 General	14
10.3.2 Step 1, define the upper-wavelength region.....	15
10.3.3 Step 2, characterize the attenuation curve.....	15
10.3.4 Step 3, determine the upper wavelength of the transition region	16
10.3.5 Step 4, determine the lower wavelength of the transition region.....	16
10.3.6 Step 5, characterize the transition region with the theoretical model.....	16
10.3.7 Step 6, compute the cut-off wavelength, λ_c	17
11 Results.....	17
11.1 Report the following information with each measurement:	17
11.2 The following information shall be available upon request:	17

12 Specification information	18
Annex A (normative) Requirements specific to method A – Cable cut-off wavelength, λ_{CC} , using uncabled fibre	19
Annex B (normative) Requirements specific to method B – Cable cut-off wavelength, λ_{CC} , using cabled fibre	20
Annex C (normative) Requirements specific to method C – Fibre cut-off wavelength, λ_C	21
Bibliography	22
Figure 1 – Deployment configuration for cable cut-off wavelength, method A	9
Figure 2 – Deployment configuration for cable cut-off wavelength, method B	10
Figure 3 – Default configuration to measure λ_C	10
Figure 4 – Deployment configurations for fibre cut-off measurement	11
Figure 5 – Cut-off wavelength using the bend-reference technique	12
Figure 6 – Cut-off wavelength using the multimode-reference technique	13

INTERNATIONAL ELECTROTECHNICAL COMMISSION

OPTICAL FIBRES –

Part 1-44: Measurement methods and test procedures – Cut-off wavelength

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 60793-1-44 has been prepared by subcommittee 86A: Fibres and cables, of IEC technical committee 86: Fibre optics.

This second edition cancels and replaces the first edition published in 2001. This edition constitutes a technical revision.

The main change with respect to the previous edition is the withdrawal of annex D.

Annexes A, B and C form an integral part of this standard.

This standard should be read in conjunction with IEC 60793-1-1.

The text of this standard is based on the following documents:

FDIS	Report on voting
86A/1369/FDIS	86A/1385/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts of the IEC 60793-1-4x series, published under the general title *Optical fibres – measurement methods and test procedures*, can be found on the IEC website

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

OPTICAL FIBRES –

Part 1-44: Measurement methods and test procedures – Cut-off wavelength

1 Scope

This part of IEC 60793 establishes uniform requirements for measuring the cut-off wavelength of single-mode optical fibre, thereby assisting in the inspection of fibres and cables for commercial purposes.

This standard gives the methods for measuring the cut-off wavelength of fibre and cable

There are two methods for measuring cable cut-off wavelength, λ_{CC} :

- Method A: using uncabled fibre;
- Method B: using cabled fibre.

There is only one method (Method C) for measuring fibre cut-off wavelength, λ_C .

The test method in this standard describes procedures for determining the cut-off wavelength of a sample fibre in either an uncabled condition (λ_C) or in a cable (λ_{CC}). Three default configurations are given here: any different configuration will be given in a detail specification. These procedures apply to all category B and C fibre types (see Normative references).

All methods require a reference measurement. There are two reference-scan techniques, either or both of which may be used with all methods:

- bend-reference technique;
- multimode-reference technique using category A1 multimode fibre.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 60793-1-1, *Optical fibres – Part 1-1: Measurement methods and test procedures – General and guidance*

IEC 60793-1-40, *Optical fibres – Part 1-40: Measurement methods and test procedures – Attenuation*
