CONTENTS

FOREWORD.....	3
1 Scope.....	5
2 Normative references	5
3 Terms and definitions	5
4 Testing conditions	6
5 Reference test method	6
6 Specimen	6
7 Test methods.....	6
7.1 Phase beat length measurement methods.....	6
7.1.1 General	6
7.1.2 Monitoring of output power using an electromagnet	6
7.1.3 Monitoring of SOP using a lateral force.....	8
7.2 Group beat length measurement method.....	10
7.2.1 General	10
7.2.2 Apparatus and procedure.....	10
7.2.3 Calculation	11
8 Results.....	11
8.1 Information available with each measurement.....	11
8.2 Information available upon request	12
Annex A (informative) Difference of beat lengths by measurement method (phase beat length and group beat length)	13
A.1 Phase modal birefringence and phase beat length	13
A.2 Group modal birefringence and group beat length.....	13
Annex B (informative) Correlation between results obtained by the two methods (phase beat length and group beat length).....	16
B.1 General.....	16
B.2 Example of correlation between phase and group beat lengths in the case of PANDA fibres.....	16
B.3 Example of correlation between phase and group beat lengths in the case of elliptical core fibres.....	17
Annex C (informative) Electromagnet for Faraday rotation	18
Bibliography.....	19
Figure 1 – Apparatus of phase beat length measurement using an electromagnet	6
Figure 2 – Example of measurement profile by electromagnet	8
Figure 3 – Set-up for measuring $L_B(\text{phase})$ when monitoring SOP together with a moving lateral force	9
Figure 4 – SOP measured at different levels of lateral force.....	10
Figure 5 – Example of SOP evolution and normalized Stokes vector components	10
Figure B.1 – Wavelength dependence of $B_{\text{group}}/B_{\text{phase}}$ [3]	16
Figure C.1 – Schematic of the electromagnet.....	18
Table B.1 – $B_{\text{group}}/B_{\text{phase}}$ of elliptical core fibres.....	17

INTERNATIONAL ELECTROTECHNICAL COMMISSION

OPTICAL FIBRES –

Part 1-60: Measurement methods and test procedures – Beat length

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 60793-1-60 has been prepared by subcommittee 86A: Fibres and cables, of IEC technical committee 86: Fibre optics.

The text of this International Standard is based on the following documents:

CDV	Report on voting
86A/1737/CDV	86A/1782/RVC

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC 60793 series, published under the general title *Optical fibres*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

OPTICAL FIBRES –

Part 1-60: Measurement methods and test procedures – Beat length

1 Scope

This part of IEC 60793 defines test methods for both the phase beat length, and the group beat length. These two parameters are defined differently, and will give different results depending on the type of polarization-maintaining (PM) fibre.

The phase beat length is the relevant parameter for the fibres ability to maintain a high extinction ratio. This is described in more details in Annexes A and B.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 60068-1, *Environmental testing – Part 1: General and guidance*

IEC 60793-1-1, *Optical fibres – Part 1-1: Measurement methods and test procedures – General and guidance*

IEC 60793-1-48, *Optical fibres – Part 1-48: Measurement methods and test procedures – Polarization mode dispersion*

IEC 60793-2-70¹, *Optical fibres – Part 2-70: Product specifications – Sectional specifications for polarization-maintaining fibres*

¹ Under preparation. Stage at the time of publication: IEC CCDV 60793-2-70:2017.
