REDLINE VERSION

Power cables with extruded insulation and their accessories for rated voltages above 30 kV ($U_m = 36$ kV) up to 150 kV ($U_m = 170$ kV) – Test methods and requirements

CONTENTS

FOREWORD.....	8
INTRODUCTION.....	10
1 Scope.....	11
2 Normative references	11
3 Terms and definitions	13
3.1 Definitions of dimensional values (thicknesses, cross-sections, etc.)	13
3.2 Definitions concerning tests	14
3.3 Other definitions	14
4 Voltage designations, materials and rounding of numbers	16
4.1 Rated voltages.....	16
4.2 Cable insulating compounds	16
4.3 Cable metal screens/sheaths	16
4.4 Cable oversheathing compounds	16
4.5 Rounding of numbers.....	17
5 Precautions against water penetration in cables	17
6 Cable characteristics	17
7 Accessories characteristics	18
7.1 Gas immersed cable terminations	18
7.2 Composite Insulators for outdoor cable terminations	18
7.3 Accessory characteristics to be declared	19
8 Test conditions	20
8.1 Ambient temperature.....	20
8.2 High voltage tests	20
8.3 Waveform of lightning impulse test voltages.....	20
8.4 Relationship of test voltages to rated voltages	20
8.5 Determination of the cable conductor temperature	20
8.6 Tests on gas immersed terminations	20
9 Routine tests on cables and accessories	21
9.1 General.....	21
9.2 Partial discharge test	21
9.3 Voltage test	21
9.4 Electrical test on oversheath of the cable.....	22
10 Sample tests on cables.....	22
10.1 General.....	22
10.2 Frequency of tests	22
10.3 Repetition of tests.....	22
10.4 Conductor examination	23
10.5 Measurement of electrical resistance of conductor and metal screen	23
10.6 Measurement of thickness of cable insulation and oversheath	23
10.6.1 General	23
10.6.2 Requirements for the insulation	23
10.6.3 Requirements for the cable oversheath.....	24
10.7 Measurement of thickness of metal sheath.....	24
10.7.1 General	24
10.7.2 Lead or lead alloy sheath.....	24
10.7.3 Copper or aluminium sheath	25

10.7.4	Metal tape for CD design	25
10.8	Measurement of diameters	25
10.9	Hot set test for XLPE, EPR and HEPR insulations	26
10.9.1	Procedure	26
10.9.2	Requirements	26
10.10	Measurement of capacitance	26
10.11	Measurement of density of HDPE insulation	26
10.11.1	Procedure	26
10.11.2	Requirements	26
10.12	Lightning impulse voltage test	26
10.13	Water penetration test	27
10.14	Additional Tests on components of cables with a longitudinally applied metal tape or foil, bonded to the oversheath	27
11	Sample tests on accessories	27
11.1	Tests on components of accessory	27
11.2	Tests on complete accessory	27
12	Type tests on cable systems	27
12.1	General	27
12.2	Range of type approval	28
12.3	Summary of type tests	29
12.4	Electrical type tests on cable systems	30
12.4.1	Test voltage values	30
12.4.2	Tests and sequence of tests	30
12.4.3	Bending test	30
12.4.4	Partial discharge tests	31
12.4.5	Tan δ measurement	31
12.4.6	Heating cycle voltage test	32
12.4.7	Lightning impulse voltage test followed by a power frequency voltage test	32
12.4.8	Examination	33
12.4.9	Resistivity of semi-conducting screens	33
12.5	Non-electrical type tests on cable components and on complete cable	34
12.5.1	General	34
12.5.2	Check of cable construction	34
12.5.3	Tests for determining the mechanical properties of insulation before and after ageing	34
12.5.4	Tests for determining the mechanical properties of oversheaths before and after ageing	35
12.5.5	Ageing tests on pieces of complete cable to check compatibility of materials	35
12.5.6	Loss of mass test on PVC oversheaths of type ST ₂	36
12.5.7	Pressure test at high temperature on oversheaths	36
12.5.8	Test on for PVC oversheaths (ST ₁ , ST ₂) and LSHF oversheaths (ST ₁₂) at low temperature	36
12.5.9	Heat shock test for PVC oversheaths (ST ₁ and ST ₂)	37
12.5.10	Ozone resistance test for EPR and HEPR insulations	37
12.5.11	Hot set test for EPR, HEPR and XLPE insulations	37
12.5.12	Measurement of density of HDPE insulation	37

12.5.13	Measurement of carbon black content of for black PE oversheaths (ST ₃ and ST ₇)	37
12.5.14	Test under fire conditions	38
12.5.15	Water penetration test	40
12.5.16	Tests on components of cables with a longitudinally applied metal tape or foil, bonded to the oversheath	40
12.5.17	Shrinkage test for PE, HDPE and XLPE insulations	40
12.5.18	Shrinkage test for PE oversheaths (ST ₃ , ST ₇) and LSHF oversheaths (ST ₁₂)	41
12.5.19	Determination of hardness of HEPR insulation	41
12.5.20	Determination of the elastic modulus of HEPR insulation	41
13	Prequalification test of the cable system	41
13.1	General and range of prequalification test approval	41
13.2	Prequalification test on complete system	42
13.2.1	Summary of prequalification tests	42
13.2.2	Test voltage values	43
13.2.3	Test arrangement	43
13.2.4	Heating cycle voltage test	44
13.2.5	Lightning impulse voltage test	44
13.2.6	Examination	45
13.3	Tests for the extension of the prequalification of a cable system	45
13.3.1	Summary of the extension of prequalification test	45
13.3.2	Electrical part of the extension of prequalification tests on complete cable system	45
14	Type tests on cables	47
14.1	General	47
14.2	Range of type approval	48
14.3	Summary of type tests	48
14.4	Electrical type tests on completed cables	49

TEST METHODS AND REQUIREMENTS**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

This consolidated version of the official IEC Standard and its amendment has been prepared for user convenience.

IEC 60840 edition 5.1 contains the fifth edition (2020-05) [documents 20/1909/FDIS and 20/1910/RVD], its corrigendum (2021-02) and its amendment 1 (2023-06) [documents 20/2100/FDIS and 20/2107/RVD].

In this Redline version, a vertical line in the margin shows where the technical content is modified by amendment 1. Additions are in green text, deletions are in strikethrough red text. A separate Final version with all changes accepted is available in this publication.

International Standard IEC 60840 has been prepared by IEC technical committee 20: Electric cables.

This fifth edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- Gas immersed cable terminations for use at rated voltages above 52 kV are required to be designed, type and routine tested in accordance with IEC 62271-209 in addition to the routine and type tests specified in this document.
- Requirements are introduced for composite outdoor termination insulators.
- The test cylinder diameters specified for the bending test (type and prequalification tests) have been modified in line with IEC TR 61901:2016.
- A low smoke halogen free oversheath material, designated ST₁₂ is introduced.
- Additional tests under fire conditions are introduced: vertical flame spread, smoke density, acidity and conductivity, which shall be applied according to the fire performance declared for the cable.
- A test for water penetration in the conductor is added.
- In addition to tests on the outer protection of joints, type tests on the screen sectionalizing insulation of all accessories have been introduced.

NOTE For a more detailed history of events leading up to this fifth edition, see the Introduction.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

The committee has decided that the contents of this document and its amendment will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The "colour inside" logo on the cover page of this document indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INTRODUCTION

The first edition of IEC 60840, published in 1988, dealt only with cables. Accessories were added to the second edition, published in February 1999, which separately covered test methods and test requirements for

- a) cables alone,
- b) cables together with accessories (a cable system).

Some countries then suggested that a better discrimination be made between systems, cables and accessories, particularly for the lower voltages of the scope, for example 45 kV. This was taken into account in the third edition (2004) and has been retained subsequently, giving the type approval requirements and the range of approvals for:

- a) cable systems,
- b) cables alone,
- c) accessories alone.

Manufacturers and users may choose the most appropriate option for type approval.

The fourth edition (2011) introduced the prequalification test procedure, as a cable system inclusive of accessories, for cables with high electrical stresses at the conductor screen and/or insulation screen.

Other significant changes in the fourth edition were:

- a) The clause numbering of this document and IEC 62067 was coordinated to achieve as much commonality as possible.
- b) In the case of the sample test, the lightning impulse voltage test is no longer followed by a power frequency voltage test.

In this fifth edition the principle changes are as follows:

- a) New definitions have been added for three different cable screen designs following IEC TR 61901:2016.
- b) Gas immersed cable terminations for use at rated voltages above 52 kV are required to be designed, type and routine tested in accordance with IEC 62271-209 in addition to the routine and type tests specified in this document.
- c) Requirements are introduced for composite outdoor termination insulators.
- d) The test cylinder diameters specified for the bending test (type and prequalification tests) have been modified in line with IEC TR 61901:2016.
- e) A low smoke halogen free oversheath material, designated ST₁₂ is introduced.
- f) Additional tests under fire conditions are introduced: vertical flame spread, smoke density, acidity and conductivity, which are applied according to the fire performance declared for the cable.
- g) A test for water penetration in the conductor is added.
- h) In addition to tests on the outer protection of joints, type tests on the screen sectionalizing insulation of all accessories have been introduced.
- i) A list of relevant CIGRE references is given in the bibliography.

POWER CABLES WITH EXTRUDED INSULATION AND THEIR ACCESSORIES FOR RATED VOLTAGES ABOVE 30 kV ($U_m = 36$ kV) UP TO 150 kV ($U_m = 170$ kV) – TEST METHODS AND REQUIREMENTS

1 Scope

This document specifies test methods and requirements for power cable systems, cables alone and accessories alone, for fixed installations and for rated voltages above 30 kV ($U_m = 36$ kV) up to and including 150 kV ($U_m = 170$ kV).

The requirements apply to single-core cables and to individually screened three-core cables and to their accessories for usual conditions of installation and operation, but not to special cables, such as submarine cables and their accessories, for which modifications to the standard tests or the setup of special test conditions can be necessary.

This document does not cover transition joints between cables with extruded insulation and paper insulated cables.

TEST METHODS AND REQUIREMENTS**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

This consolidated version of the official IEC Standard and its amendment has been prepared for user convenience.

IEC 60840 edition 5.1 contains the fifth edition (2020-05) [documents 20/1909/FDIS and 20/1910/RVD], its corrigendum (2021-02) and its amendment 1 (2023-06) [documents 20/2100/FDIS and 20/2107/RVD].

This Final version does not show where the technical content is modified by amendment 1. A separate Redline version with all changes highlighted is available in this publication.

International Standard IEC 60840 has been prepared by IEC technical committee 20: Electric cables.

This fifth edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- Gas immersed cable terminations for use at rated voltages above 52 kV are required to be designed, type and routine tested in accordance with IEC 62271-209 in addition to the routine and type tests specified in this document.
- Requirements are introduced for composite outdoor termination insulators.
- The test cylinder diameters specified for the bending test (type and prequalification tests) have been modified in line with IEC TR 61901:2016.
- A low smoke halogen free oversheath material, designated ST₁₂ is introduced.
- Additional tests under fire conditions are introduced: vertical flame spread, smoke density, acidity and conductivity, which shall be applied according to the fire performance declared for the cable.
- A test for water penetration in the conductor is added.
- In addition to tests on the outer protection of joints, type tests on the screen sectionalizing insulation of all accessories have been introduced.

NOTE For a more detailed history of events leading up to this fifth edition, see the Introduction.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

The committee has decided that the contents of this document and its amendment will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

INTRODUCTION

The first edition of IEC 60840, published in 1988, dealt only with cables. Accessories were added to the second edition, published in February 1999, which separately covered test methods and test requirements for

- a) cables alone,
- b) cables together with accessories (a cable system).

Some countries then suggested that a better discrimination be made between systems, cables and accessories, particularly for the lower voltages of the scope, for example 45 kV. This was taken into account in the third edition (2004) and has been retained subsequently, giving the type approval requirements and the range of approvals for:

- a) cable systems,
- b) cables alone,
- c) accessories alone.

Manufacturers and users may choose the most appropriate option for type approval.

The fourth edition (2011) introduced the prequalification test procedure, as a cable system inclusive of accessories, for cables with high electrical stresses at the conductor screen and/or insulation screen.

Other significant changes in the fourth edition were:

- a) The clause numbering of this document and IEC 62067 was coordinated to achieve as much commonality as possible.
- b) In the case of the sample test, the lightning impulse voltage test is no longer followed by a power frequency voltage test.

In this fifth edition the principle changes are as follows:

- a) New definitions have been added for three different cable screen designs following IEC TR 61901:2016.
- b) Gas immersed cable terminations for use at rated voltages above 52 kV are required to be designed, type and routine tested in accordance with IEC 62271-209 in addition to the routine and type tests specified in this document.
- c) Requirements are introduced for composite outdoor termination insulators.
- d) The test cylinder diameters specified for the bending test (type and prequalification tests) have been modified in line with IEC TR 61901:2016.
- e) A low smoke halogen free oversheath material, designated ST₁₂ is introduced.
- f) Additional tests under fire conditions are introduced: vertical flame spread, smoke density, acidity and conductivity, which are applied according to the fire performance declared for the cable.
- g) A test for water penetration in the conductor is added.
- h) In addition to tests on the outer protection of joints, type tests on the screen sectionalizing insulation of all accessories have been introduced.
- i) A list of relevant CIGRE references is given in the bibliography.

POWER CABLES WITH EXTRUDED INSULATION AND THEIR ACCESSORIES FOR RATED VOLTAGES ABOVE 30 kV ($U_m = 36$ kV) UP TO 150 kV ($U_m = 170$ kV) – TEST METHODS AND REQUIREMENTS

1 Scope

This document specifies test methods and requirements for power cable systems, cables alone and accessories alone, for fixed installations and for rated voltages above 30 kV ($U_m = 36$ kV) up to and including 150 kV ($U_m = 170$ kV).

The requirements apply to single-core cables and to individually screened three-core cables and to their accessories for usual conditions of installation and operation, but not to special cables, such as submarine cables and their accessories, for which modifications to the standard tests or the setup of special test conditions can be necessary.

This document does not cover transition joints between cables with extruded insulation and paper insulated cables.
