## CONTENTS

**FOREWORD** ........................................................................................................................... 4

1 Scope ......................................................................................................................................... 6

2 Normative references ............................................................................................................... 6

3 Terms and definitions ............................................................................................................. 8

4 Materials and cable construction ............................................................................................ 8
   4.1 Cable construction ............................................................................................................... 8
   4.2 Inner conductor .................................................................................................................. 8
       4.2.1 Conductor material ................................................................................................... 8
       4.2.2 Conductor construction ............................................................................................ 9
   4.3 Dielectric ............................................................................................................................. 9
   4.4 Outer conductor .................................................................................................................. 9
   4.5 Sheath .................................................................................................................................. 9

5 Standard rating and characteristics ......................................................................................... 10
   5.1 Nominal characteristic impedance .................................................................................... 10
   5.2 Rated temperature range .................................................................................................... 10
   5.3 Operating frequency ........................................................................................................... 10

6 Identification, marking and labeling ......................................................................................... 10
   6.1 Cable identification ............................................................................................................ 10
   6.2 Cable marking .................................................................................................................... 10
   6.3 Labelling ............................................................................................................................ 10

7 Tests of finished cables ............................................................................................................. 10
   7.1 General ............................................................................................................................... 10
   7.2 Electrical testing of the finished cable (see Table 1) .......................................................... 11
   7.3 Environmental testing (see Table 2) ................................................................................ 12
   7.4 Mechanical testing (see Table 3) ...................................................................................... 13
   7.5 Fire performance testing (see Table 4) ............................................................................ 14

8 Quality assessment ................................................................................................................... 14

9 Delivery and storage ................................................................................................................ 14

Annex A (normative) Attenuation constant ................................................................................. 15
   A.1 Procedure .......................................................................................................................... 15
       A.1.1 General ...................................................................................................................... 15
       A.1.2 Ground-level method ............................................................................................... 15
       A.1.3 Free-space method ................................................................................................. 15
   A.2 Measurement (see Figures A.1 and A.2) .......................................................................... 15
   A.3 Evaluation ......................................................................................................................... 15
   A.4 Requirement ...................................................................................................................... 16

Annex B (normative) Coupling loss (far field) .......................................................................... 17
   B.1 Procedure .......................................................................................................................... 17
       B.1.1 General ...................................................................................................................... 17
       B.1.2 Ground-level method ............................................................................................... 17
       B.1.3 Free-space method ................................................................................................. 17
   B.2 Measurement (see Figures B.3 and B.4) .......................................................................... 18
   B.3 Evaluation ......................................................................................................................... 18
   B.4 Requirement ...................................................................................................................... 19
   B.5 Test report ........................................................................................................................ 19
Annex C (informative) Coupling loss around circumferential orientation of radiating cable ..................................................................................................................................... 21

C.1 General ..................................................................................................................................... 21
C.2 Definitions ..................................................................................................................................... 21
  C.2.1 Coupling loss chart around circumferential orientation of radiating cable (Y-Z) .............................................................................................................. 21
  C.2.2 Out-of roundness of coupling loss chart around circumferential orientation of radiating cable ................................................................................ 21
C.3 Test method ..................................................................................................................................... 21
C.4 Calculation ..................................................................................................................................... 22
C.5 Requirements ..................................................................................................................................... 22
C.6 Test report ..................................................................................................................................... 22

Annex D (under study) Radiating intensity around circumferential orientation of radiating cable ..................................................................................................................................... 24

D.1 General ..................................................................................................................................... 24
D.2 Definitions ..................................................................................................................................... 24

INTERNATIONAL ELECTROTECHNICAL COMMISSION

COAXIAL COMMUNICATION CABLES –

Part 4: Sectional specification for radiating cables

FOREWORD

1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.

2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.

3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.

4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.

5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.

6) All users should ensure that they have the latest edition of this publication.

7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.

8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.

9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 61196-4 has been prepared by subcommittee 46A: Coaxial cables, of IEC technical committee 46: Cables, wires, waveguides, R.F. connectors, R.F. and microwave passive components and accessories.

This third edition cancels and replaces the second edition published in 2004. This edition constitutes a technical revision.

The main changes with respect to the previous edition are as follows:

– a definition for coupling loss was added,
– Clause 4 "Materials and cable construction" was added,
– rated temperature range, operating frequency and radiating characteristics as standard rating and characteristics were added,
– identification, marking and labeling was added,
IEC 61196-4:2015 © IEC 2015

– the tables of test procedures were revised,
– quality assessment and packaging was added,
– Annex C, “Coupling loss around circumferential orientation of radiating cable” was added
– Annex D “Radiating intensity around circumferential orientation of radiating cable” was added.

The text of this standard is based on the following documents:

<table>

</table>

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

This publication is to be read in conjunction with IEC 61196-1:2005.

A list of all the parts in the IEC 61196 series published under the general title Coaxial communication cables can be found on the IEC website.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC website under "http://webstore.iec.ch" in the data related to the specific publication. At this date, the publication will be

• reconfirmed,
• withdrawn,
• replaced by a revised edition, or
• amended.

A bilingual version of this publication may be issued at a later date.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.
1 Scope

This part of IEC 61196 applies to radiating coaxial communication cables. These cables are intended for use in wireless communication systems, such as tunnels, railways, highways, subways, elevators and other installations in which conventional antenna transmission is not satisfactory or even impossible.

It is to be read in conjunction with IEC 61196-1:2005.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 60068-1:2013, Environmental testing – Part 1: General and guidance

IEC 60068-2-61, Environmental testing – Part 2-61: Test methods: Test Z/ABDM: Climatic sequence

IEC 60332-1-2, Tests on electric and optical fibre cables under fire conditions – Part 1-2: Test for vertical flame propagation for a single insulated wire or cable – Procedure for 1 kW pre-mixed flame

IEC TS 60695-7-50, Fire hazard testing – Part 7-50: Toxicity of fire effluent – Estimation of toxic potency – Apparatus and test method

IEC TS 60695-7-51, Fire hazard testing – Part 7-51: Toxicity of fire effluent – Estimation of toxic potency: Calculation and interpretation of test results

IEC 60754-1, Test on gases evolved during combustion of materials from cables – Part 1: Determination of the halogen acid gas content

IEC 61034-2:2005, Measurement of smoke density of cables burning under defined conditions – Part 2: Test procedure and requirements

IEC 61196-1:2005, Coaxial communication cables – Part 1: Generic specification – General, definitions and requirements

IEC 61196-1-1, Coaxial communication cables – Part 1-1: Capability approval for coaxial cables
IEC 61196-1-100, Coaxial communication cables – Part 1-100: Electrical test methods – General requirements

IEC 61196-1-102, Coaxial communication cables – Part 1-102: Electrical test methods – Test for insulation resistance of cable dielectric

IEC 61196-1-103, Coaxial communication cables – Part 1-103: Electrical test methods – Test for capacitance of cable

IEC 61196-1-105, Coaxial communication cables – Part 1-105: Electrical test methods – Test for withstand voltage of cable dielectric

IEC 61196-1-106, Coaxial communication cables – Part 1-106: Electrical test methods – Test for withstand voltage of cable sheath

IEC 61196-1-112, Coaxial communication cables – Part 1-112: Electrical test methods – Test for return loss (uniformity of impedance)

IEC 61196-1-115, Coaxial communication cables – Part 1-115: Electrical test methods – Test for regularity of impedance (pulse/step function return loss)

IEC 61196-1-200, Coaxial communication cables – Part 1-200: Environmental test methods – General requirements

IEC 61196-1-201, Environmental test methods – Part 1-201: Environmental test methods – Test for cold bend performance of cable

IEC 61196-1-300, Coaxial communication cables – Part 1-300: Mechanical test methods – General requirements

IEC 61196-1-301, Coaxial communication cables – Part 1-301: Mechanical test methods – Test for ovality

IEC 61196-1-302, Coaxial communication cables – Part 1-302: Mechanical test methods – Test for eccentricity

IEC 61196-1-317, Coaxial communication cables – Part 1-317: Mechanical test methods – Test for crush resistance of cable
