CONTENTS

FOREWORD.....	5
1 Scope.....	7
2 Normative references	7
3 Terms, definitions, abbreviated terms and quantity symbols	7
3.1 Terms and definitions.....	7
3.2 Abbreviated terms.....	8
3.3 Quantity symbols	9
4 General description	9
4.1 General.....	9
4.2 Light source and detector conditions.....	9
4.3 General explanation of attenuation and return loss	10
4.3.1 Attenuation	10
4.3.2 Return loss	10
4.4 Device under test (DUT)	11
4.5 Measurement methods.....	12
5 Apparatus.....	12
5.1 General.....	12
5.2 Optical source.....	13
5.2.1 Method A – Broadband light source (BBS).....	13
5.2.2 Method B – Tuneable narrowband light source (TNLS)	13
5.2.3 Method C – Set of multiple fixed narrowband light sources (NLS)	13
5.3 Depolarizer	13
5.4 Power detection systems	14
5.4.1 Method A – Tuneable narrowband detection (TND).....	14
5.4.2 Method B and C – Broadband detection (BBD)	14
5.5 Branching device (BD)	15
5.6 Termination.....	15
5.7 Temporary joint (TJ)	15
5.8 Test patch cord.....	15
5.9 Reference plugs (RP).....	16
5.10 Reference adapters (RA)	16
6 Procedure.....	16
6.1 Method A – Broadband light source	16
6.1.1 Method A1 – Attenuation only.....	16
6.1.2 Method A2 – Attenuation and return loss	17
6.2 Method B – Tuneable narrowband light source.....	20
6.2.1 General	20
6.2.2 Method B – Attenuation only.....	21
6.2.3 Method B – Attenuation and return loss	21
6.3 Method C – Set of multiple fixed narrowband light sources	22
6.3.1 General	22
6.3.2 Method C1 – Attenuation only.....	22
6.3.3 Method C2 – Attenuation and return loss	22
7 Test results	23

8	Details to be reported	23
8.1	General.....	23
8.2	Total measurement system	24
8.3	Source	24
8.3.1	Broadband light source.....	24
8.3.2	Tuneable or discrete narrowband light source.....	24
8.3.3	Depolarizer.....	24
8.4	Detection system	24
8.4.1	Optical power meter.....	24
8.4.2	Optical spectrum analyzer	24
8.4.3	Branching device	25
8.4.4	Termination	25
8.4.5	Temporary joint	25
8.4.6	Reference plug	25
8.4.7	Reference adapter.....	25
	Annex A (informative) Types of passive optical components	26
	Annex B (informative) Typical light source characteristics	27
B.1	General.....	27
B.2	Broadband light source	27
B.3	Tuneable laser source	27
	Annex C (informative) Terminations	29
	Bibliography.....	31
	Figure 1 – Generic explanation of attenuation and return loss	11

INTERNATIONAL ELECTROTECHNICAL COMMISSION

FIBRE OPTIC INTERCONNECTING DEVICES AND PASSIVE COMPONENTS – BASIC TEST AND MEASUREMENT PROCEDURES –

Part 3-7: Examinations and measurements – Wavelength dependence of attenuation and return loss of single mode components

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 61300-3-7 has been prepared by subcommittee 86B: Fibre optic interconnecting devices and passive components, of IEC technical committee 86: Fibre optics. It is an International Standard.

This third edition cancels and replaces the second edition published in 2009. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) reduction of the number of alternative methods proposed to bring in-line with industry practice;
- b) re-statement of the equations for insertion loss and return loss using logarithmic forms more common in the industry;
- c) additional recommendations with respect to the creation of fibre terminations;

- d) additional discussion on the characterization of the optical sources used in this document;
- e) simplification of bi-directional testing;
- f) removal of separate return loss only measurement procedures.

The text of this International Standard is based on the following documents:

Draft	Report on voting
86B/4337/CDV	86B/4425A/RVC

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/standardsdev/publications.

A list of all parts in the IEC 61300 series, published under the general title *Fibre optic interconnecting devices and passive components – Basic test and measurement procedures*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

FIBRE OPTIC INTERCONNECTING DEVICES AND PASSIVE COMPONENTS – BASIC TEST AND MEASUREMENT PROCEDURES –

Part 3-7: Examinations and measurements – Wavelength dependence of attenuation and return loss of single mode components

1 Scope

This part of IEC 61300-3 describes methods available to measure the wavelength dependence of attenuation and return loss of two-port, single mode passive optical components. It is not, however, applicable to dense wavelength division multiplexing (DWDM) devices. Measurement methods of wavelength dependence of attenuation of DWDM devices are described in IEC 61300-3-29.

There are two measurement cases described in this document:

- a) measurement of attenuation only;
- b) measurement of attenuation and return loss at the same time.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
