CONTENTS

FOREWORD.....	5
INTRODUCTION.....	7
1 Scope.....	8
2 Normative references.....	8
3 Terms and definitions	9
4 Symbols	13
5 Structure and characteristics.....	14
5.1 Fibre Bragg grating (FBG)	14
5.2 FBG strain sensor configuration.....	18
5.3 Measuring point and installation	18
5.4 Gauge length	19
5.5 Strain and reference strain	19
5.6 Reference wavelength.....	19
5.7 Stability behaviour.....	20
5.7.1 Drift and creep	20
5.7.2 Shape stability of the Bragg grating peak.....	20
5.7.3 Hysteresis.....	20
5.8 Test specimen.....	20
5.9 Indication of the measured values	21
5.10 Zero point related measurement	21
5.11 Non-zero point related measurement	21
5.12 Production set.....	21
5.13 FBG strain sensor standard type	21
5.14 FBG strain sensor series	21
6 Features and characteristics to be reported.....	21
6.1 Construction details and geometrical dimensions	21
6.2 Configuration of the FBG strain sensor	22
6.3 Temperature and humidity range	22
6.4 Connecting requirement	22
7 Features and characteristics to be measured	22
7.1 Sampling and statistical evaluation	22
7.1.1 Sampling	22
7.1.2 Random sampling	22
7.1.3 Type testing.....	22
7.1.4 Series testing.....	22
7.1.5 Individual sample testing	23
7.1.6 Reporting the measuring result.....	23
7.1.7 Sample conditioning.....	23
7.1.8 Ambient test conditions	23
7.1.9 Required type of test for individual characteristics	23
7.2 Bragg wavelength λ_B	24
7.2.1 General	24
7.2.2 Measuring procedure	24
7.2.3 Evaluation.....	25
7.2.4 Reporting.....	25

7.3	FBG spectral width	25
7.3.1	Measuring procedure	25
7.3.2	Evaluation.....	25
7.3.3	Reporting.....	25
7.4	FBG reflectivity	25
7.4.1	Measuring procedure	25
7.4.2	Evaluation.....	26
7.4.3	Reporting.....	26
7.5	FBG Strain sensitivity.....	26
7.5.1	General	26
7.5.2	Tensile test set-up	27
7.5.3	Measuring procedure tensile test.....	27
7.5.4	Evaluation.....	28
7.5.5	Reporting.....	28
7.6	Gauge factor k	28
7.6.1	General	28
7.6.2	Bending test set-up.....	29
7.6.3	Measurement procedure.....	31
7.6.4	Evaluation.....	32
7.6.5	Reporting.....	32
7.7	Maximum strain range at room temperature	32
7.7.1	General	32
7.7.2	Test set-up	32
7.7.3	Measuring procedure	33
7.7.4	Evaluation.....	33
7.7.5	Reporting.....	33
7.8	Fatigue behaviour	34
7.8.1	Test set-up	34
7.8.2	Measuring procedure	34
7.8.3	Evaluation.....	34
7.8.4	Reporting.....	35
7.9	Minimum operating radius of curvature	35
7.9.1	Measuring procedure	35
7.9.2	Evaluation.....	35
7.9.3	Reporting.....	35
7.10	Temperature and humidity ranges.....	35
7.10.1	General	35
7.10.2	Measuring procedure	36
7.10.3	Evaluation.....	36
7.10.4	Reporting.....	36
7.11	Other environmental influences	36
7.12	Temperature-induced strain response.....	36
7.12.1	General	36
7.12.2	Test set-up	37
7.12.3	Measuring procedure	38
7.12.4	Evaluation.....	38
7.12.5	Reporting.....	38
7.13	Proof test and lifetime considerations	38
7.13.1	General	38

7.13.2	Measuring procedure	39
7.13.3	Evaluation.....	39
7.13.4	Reporting.....	40
8	Recommendations for use of FBG measuring instruments	40
Annex A (informative)	Further properties of FBG strain sensors	41
A.1	General.....	41
A.2	Extended explanation of FBG side-lobes for different conditions of use	41
Annex B (informative)	Blank detail specification.....	45
B.1	General.....	45
B.2	Mechanical setup of the FBG strain sensor	45
B.3	Operational characteristics of the FBG strain sensor	45
B.4	Limiting parameters of the FBG strain sensor.....	46
B.5	Temperature data of the FBG strain sensor.....	46
B.6	Further information of the FBG strain sensor given upon request.....	46
B.7	Key performance data of the FBG measuring instrument.....	46
Annex C (informative)	Polarization effects	48
Annex D (informative)	Applied FBG strain sensors.....	49
D.1	General.....	49
D.2	Recommended bonding process	49

INTERNATIONAL ELECTROTECHNICAL COMMISSION

FIBRE OPTIC SENSORS –

Part 1-1: Strain measurement – Strain sensors based on fibre Bragg gratings

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 61757-1-1 has been prepared by subcommittee SC 86C: Fibre optic systems and active devices, of IEC technical committee 86: Fibre optics.

The text of this standard is based on the following documents:

CDV	Report on voting
86C/1322/CDV	86C/1353/RVC

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC 61757 series, published under the general title *Fibre optic sensors*, can be found on the IEC website.

This International Standard is to be used in conjunction with IEC 61757-1:2012.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INTRODUCTION

It has been decided to restructure the IEC 61757 series, with the following logic. From now on, the sub-parts will be renumbered as IEC 61757-*M-T*, where *M* denotes the measure and *T*, the technology.

The existing part IEC 61757-1:2012 will be renumbered as IEC 61757 when it will be revised as edition 2.0 and will serve as an umbrella document over the entire series.

FIBRE OPTIC SENSORS –

Part 1-1: Strain measurement – Strain sensors based on fibre Bragg gratings

1 Scope

This part of IEC 61757 defines detail specifications for fibre optic sensors using one or more fibre Bragg gratings (FBG) as the sensitive element for strain measurements. Generic specifications for fibre optic sensors are defined in IEC 61757-1:2012.

This standard specifies the most important features and characteristics of a fibre optic sensor for strain measurements based on use of an FBG as the sensitive element, and defines the procedures for their determination. Furthermore, it specifies basic performance parameters and characteristics of the corresponding measuring instrument to read out the optical signal from the FBG. This standard refers to the measurement of static and dynamic strain values in a range of frequencies.

A blank detail specification is provided in Annex B.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
