## CONTENTS

FOREWORD.....	5
1 Scope.....	7
2 Normative references.....	7
3 Terms and definitions.....	8
4 Physical background.....	10
5 Principle of the test methods.....	10
5.1 General.....	10
5.2 Transfer impedance.....	11
5.3 Screening attenuation.....	12
5.4 Coupling attenuation.....	12
5.5 Tube in tube method.....	13
6 Test procedures.....	13
6.1 General.....	13
6.2 Triaxial cell.....	13
6.3 Cut off frequencies, higher order modes.....	13
6.4 Test equipment.....	14
6.5 Calibration procedure.....	14
6.6 Test leads and connecting cables to DUT.....	15
7 Sample preparation.....	15
7.1 Coaxial connector or assembly or quasi-coaxial component.....	15
7.2 Balanced or multipin connector or component.....	15
7.3 Cable assemblies.....	16
7.4 Other screened devices.....	17
8 Transfer impedance (short – matched).....	17
8.1 General.....	17
8.2 Principle block diagram of transfer impedance.....	17
8.3 Measuring procedure.....	18
8.4 Evaluation of test results.....	18
8.5 Test report.....	18
9 Screening attenuation.....	19
9.1 General.....	19
9.2 Impedance matching.....	19
9.3 Measuring with matched conditions.....	19
9.3.1 Procedure.....	19
9.3.2 Evaluation of test results.....	19
9.4 Measuring with mismatch.....	20
9.4.1 General.....	20
9.4.2 Evaluaton of test results.....	20
9.5 Test report.....	21
10 Coupling attenuation.....	21
10.1 Procedure.....	21
10.2 Expression of results.....	21
10.3 Test report.....	22
11 Coupling transfer function.....	22
Annex A (informative) Principle of the triaxial test procedure.....	23

Annex B (informative) Triaxial cell .....	25
Annex C (informative) Cut off frequencies, higher order modes.....	27
Annex D (informative) Coupling transfer function .....	30
Annex E (informative) Attenuation versus scattering parameter $S_{21}$ .....	32
Annex F (informative) Application of a moveable shorting plane.....	34
F.1 Effect of the measurement length on the measurement cut-off frequency.....	34
F.2 Details of the movable shorting plane .....	34
F.3 Measurement results .....	36
Annex G (informative) Correction in case the receiver input impedance R is higher than the characteristic impedance of the outer circuit $Z_2$ .....	37
Bibliography .....	39
Figure 1 – Definition of $Z_T$ .....	8
Figure 2 – Principle depiction of the triaxial cell to measure transfer impedance and screening attenuation .....	11
Figure 3 – Principle depiction of the triaxial cell to measure transfer impedance and screening attenuation of assemblies with tube in tube according to IEC 62153-4-7.....	11
Figure 4 – Preparation of balanced or multipin connectors for transfer impedance and screening attenuation .....	16
Figure 5 – Preparation of balanced or multipin connectors for coupling attenuation measurement.....	16
Figure 6 – Test set-up (principle) for transfer impedance measurement according to test method B of IEC 62153-4-3 .....	17

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

### METALLIC COMMUNICATION CABLE TEST METHODS –

#### **Part 4-15: Electromagnetic compatibility (EMC) – Test method for measuring transfer impedance and screening attenuation – or coupling attenuation with triaxial cell**

#### FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 62153-4-15 has been prepared by IEC technical committee 46: Cables, wires, waveguides, R.F. connectors, R.F. and microwave passive components and accessories.

The text of this standard is based on the following documents:

FDIS	Report on voting
46/573/FDIS	46/586/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all the parts in the IEC 62153-4 series published under the general title *Metallic Communication Cable test methods – Electromagnetic compatibility (EMC)*, can be found on the IEC website.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

**IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**

## **METALLIC COMMUNICATION CABLE TEST METHODS –**

### **Part 4-15: Electromagnetic compatibility (EMC) – Test method for measuring transfer impedance and screening attenuation – or coupling attenuation with triaxial cell**

#### **1 Scope**

This part of IEC 62153 specifies the procedures for measuring with triaxial cell the transfer impedance, screening attenuation or the coupling attenuation of connectors, cable assemblies and components, e.g. accessories for analogue and digital transmission systems and equipment for communication networks and cabling (in accordance with the scope of IEC technical committee 46).

Measurements can be achieved by applying the device under test direct to the triaxial cell or with the tube in tube method in accordance with IEC 62153-4-7.

#### **2 Normative references**

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 61196-1, *Coaxial communication cables – Part 1: Generic specification – General, definitions and requirements*

IEC TS 62153-4-1:2013, *Metallic communication cable test methods – Part 4-1: Electromagnetic Compatibility (EMC) – Introduction to electromagnetic screening measurements*

IEC 62153-4-3, *Metallic communication cable test methods – Part 4-3: Electromagnetic compatibility (EMC) – Surface transfer impedance – Triaxial method*

IEC 62153-4-4, *Metallic communication cable test methods – Part 4-4: Electromagnetic compatibility (EMC) – Shielded screening attenuation, test method for measuring of the screening attenuation as up to and above 3 GHz*

IEC 62153-4-7, *Metallic communication cable test methods – Part 4-7: Electromagnetic compatibility (EMC) – Test method for measuring the transfer impedance and the screening – or the coupling attenuation – Tube in tube method*

IEC 62153-4-8, *Metallic communication cable test methods – Part 4-8: Electromagnetic compatibility (EMC) – Capacitive coupling admittance*

IEC 62153-4-9:2009, *Metallic communication cable test methods – Part 4-9: Electromagnetic compatibility (EMC) – Coupling attenuation of screened balanced cables, triaxial method*

IEC 62153-4-10, *Metallic communication cable test methods – Part 4-10: Shielded screening attenuation test method for measuring the screening effectiveness of feed-troughs and electromagnetic gaskets double coaxial method*

IEC TS 62153-4-16, *Metallic communication cable test methods – Part 4-16: Extension of the frequency range to higher frequencies for transfer impedance and to lower frequencies for screening attenuation measurements using the triaxial set-up*
