CONTENTS

FOREWORD.....	5
1 Scope.....	7
2 Normative references	7
3 Terms, definitions and acronyms	7
3.1 Terms and definitions	7
3.2 Acronyms and symbols.....	10
4 Specimen	12
4.1 Specimen specification.....	12
4.2 Reference metal plate	12
4.2.1 Material and thickness.....	12
4.2.2 Surface roughness	12
4.2.3 Flatness	12
4.2.4 Size and shape.....	12
4.3 Reference specimen for calibration	12
5 Specimen holder	13
6 Measurement equipment	13
6.1 Type of network analyzer	13
6.2 Antenna	13
6.2.1 Horn antenna.....	13
6.2.2 Lens antenna.....	13
6.3 Amplifier.....	13
6.4 Cable	14
7 Measurement condition	14
7.1 Temperature and environment.....	14
7.2 Warming up of measurement equipment.....	14
7.3 Electromagnetic environment	14
8 Calibration of measurement system and measurement conditions	14
8.1 Calibration of measurement system.....	14
8.2 Measurement conditions.....	14
8.2.1 Dynamic range	14
8.2.2 Setting up of the network analyzer for keeping adequate dynamic range.....	14
9 Horn antenna method	15
9.1 Measurement system	15
9.1.1 Configuration of the measurement system	15
9.1.2 Horn antenna.....	16
9.1.3 Specimen holder.....	16
9.1.4 Mounting of the specimen.....	18
9.1.5 Antenna stand	18
9.2 Measurement conditions.....	18
9.2.1 Measurement environment	18
9.2.2 Measuring distance	18
9.2.3 Size of specimen	18
9.3 Measurement procedures	19
10 Dielectric lens antenna method – focused beam method	20
10.1 Outline	20

10.2	Measurement system	20
10.2.1	Transmitting and receiving antennas	20
10.2.2	Focused beam horn antenna	21
10.2.3	Specimen size	22
10.2.4	Reference metal plate size	22
10.2.5	Specimen holder.....	22
10.2.6	Method of fixing the specimen and the reference metal plate	23
10.3	Measurement procedures	23
11	Dielectric lens antenna method – parallel beam method	25
11.1	Principle.....	25
11.1.1	Outline	25
11.1.2	Parallel EM wave beam formed using a EM wave lens.....	25
11.2	Measurement system	26
11.2.1	Composition of measurement system	26
11.2.2	Dielectric lens antenna	29
11.3	Specimen	29
11.3.1	General	29
11.3.2	Reference metal plate	29
11.3.3	Size of specimen	30
11.4	Measurement procedures	30
11.4.1	Normal incidence.....	30
11.4.2	Oblique Incidence.....	30
12	Test report.....	31
Annex A (informative)	Reflection and scattering from metal plate – Horn antenna method	33
Annex B (informative)	Reflectivity of reference specimens using horn antenna method.....	38
Annex C (informative)	Specifications of commercially available antennas	39
Annex D (normative)	Calibration using VNA.....	42
Annex E (informative)	Dynamic range and measurement errors	51
Annex F (informative)	Enlargement of dynamic range – Calibration by isolation	53
Annex G (informative)	Relative permittivity of styrofoam and foamed polyethylene based on foam ratio	54
Annex H (informative)	Calculation of Fraunhofer region – Horn antenna method.....	55
Figure 1	– Definition of reflectivity.....	10
Figure 2	– Configuration of the measurement system normal incidence (S_{11}).....	15
Figure 3	– Configuration of the measurement system oblique incidence (S_{21})	16

Table G.2 – Relative permittivity and foam ratio of foamed polyethylene.....	54

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**REFLECTIVITY OF ELECTROMAGNETIC
WAVE ABSORBERS IN MILLIMETRE WAVE FREQUENCY –
MEASUREMENT METHODS**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC provides no marking procedure to indicate its approval and cannot be rendered responsible for any equipment declared to be in conformity with an IEC Publication.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damages or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 62431 has been prepared by subcommittee SC46F: RF and microwave passive components, of IEC technical committee 46: Cables, wires, waveguides, R.F. connectors, R.F. and microwave passive components and accessories.

IEC 62431 replaces and cancels IEC/PAS 62431 with corrections of obvious errors as noted in 46F/29A/RVN.

The text of this standard is based on the following documents:

CDV	Report on voting
46F/65/CDV	46F/72/RVC

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

The committee has decided that the contents of this publication will remain unchanged until the maintenance result date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

REFLECTIVITY OF ELECTROMAGNETIC WAVE ABSORBERS IN MILLIMETRE WAVE FREQUENCY – MEASUREMENT METHODS

1 Scope

This International Standard specifies the measurement methods for the reflectivity of electromagnetic wave absorbers (EMA) for the normal incident, oblique incident and each polarized wave in the millimetre-wave range. In addition, these methods are also equally effective for the reflectivity measurement of other materials:

- measurement frequency range: 30 GHz to 300 GHz;
- reflectivity: 0 dB to –50 dB;
- incident angle: 0° to 80°.

NOTE This standard is applicable not only to those EMA which are widely used as counter-measures against communication faults, radio interference etc. , but also to those used in an anechoic chamber in some cases. EMAs may be any kind of material, and may have any arbitrary shape, configuration, or layered structure as pointed out below.

Material: Conductive material, dielectric material, magnetic material.

Shape: planar-, pyramidal-, wedge-type, or other specific shapes.

Layer structure: single layer, multi layers, or graded-index material.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
