Contents

1. Overview	1
1.1 Scope	1
1.2 Purpose	1
1.3 Application	1
1.4 Annexes	2
2. Definitions, abbreviations, and acronyms.....	2
2.1 Definitions	2
2.2 Abbreviations and acronyms	4
3. Structure of this standard	5
3.1 Layers	5
3.2 Signal Modeling Language (SML) layer	6
3.3 BSC layer.....	6
3.4 TSF layer	6
3.5 Test requirement layer	6
3.6 Using the layers	7
4. Signals and SignalFunctions.....	7
4.1 Introduction	7
4.2 Physical signal states	8
4.3 Event states	9
4.4 Digital stream states.....	9
5. SML layer	10
6. BSC layer	11
6.1 BSC layer base classes.....	11
6.2 General description of BSCs.....	11
6.3 SignalFunction template	12
7. TSF layer	12
7.1 TSF classes	13
7.2 TSF signals defined by a model.....	13
7.3 TSF signals defined by an external reference	16
8. Test procedure language (TPL)	16
8.1 Goals of the TPL.....	16
8.2 Elements of the TPL	16
8.3 Use of the TPL.....	17
9. Maximizing test platform independence.....	17
Annex A (normative) Signal modeling language (SML)	18
A.1 Use of the SML.....	18
A.2 Introduction.....	18
A.3 Physical types	19
A.4 Signal definitions	22
A.5 Pure signals.....	24
A.6 Pure signal-combining mechanisms.....	26
A.7 Pure function transformations.....	32

A.8 Measuring, limiting, and sampling signals	32
A.9 Digital signals	34
A.10 Basic component SML.....	38
A.11 Fast Fourier analysis support	63
Annex B (normative) Basic signal components (BSC) layer	65
B.1 BSC layer base classes	65
B.2 BSC subclasses	65
B.3 Description of a BSC	69
B.4 Physical class	76
B.5 PulseDefns class.....	87
B.6 SignalFunction class	89
Annex C (normative) Dynamic signal descriptions.....	143
C.1 Introduction.....	143
C.2 Basic classes.....	144
C.3 Dynamic signal goals and use cases.....	152
Annex D (normative) Interface definition language (IDL) basic components	153
D.1 Introduction.....	153
D.2 IDL BSC library	153
Annex E (informative) Test signal framework (TSF) for C/ATLAS	154
E.1 Introduction	154
E.2 TSF library definition in extensible markup language (XML).....	154
E.3 Interface definition language (IDL) for the TSF for C/ATLAS	154
E.4 AC_SIGNAL<type: Current Power Voltage>	155
E.5 AM_SIGNAL.....	157
E.6 DC_SIGNAL<type: Voltage Current Power>	159
E.7 DIGITAL_PARALLEL	161
E.8 DIGITAL_SERIAL.....	163
E.9 DIGITAL_TEST	165
E.10 DME_INTERROGATION	168
E.11 DME_RESPONSE.....	171
E.12 FM_SIGNAL<type: Voltage Power Current>.....	174
E.13 ILS_GLIDE_SLOPE<type: Voltage Power>	177
E.14 ILS_LOCALIZER<type: Power Voltage>	180
E.15 ILS_MARKER.....	183
E.16 PM_SIGNAL	186
E.17 PULSED_AC_SIGNAL<type: Current Power Voltage>	188
E.18 PULSED_AC_TRAIN<type: Voltage Current Power>.....	190
E.19 PULSED_DC_SIGNAL<type: Voltage Current Power>	192
E.20 PULSED_DC_TRAIN<type: Voltage Current Power>.....	194
E.21 RADAR_RX_SIGNAL.....	196
E.22 RADAR_TX_SIGNAL<type: Current Voltage Power>.....	199
E.23 RAMP_SIGNAL<type: Voltage Current Power>	200
E.24 RANDOM_NOISE	202
E.25 RESOLVER	204
E.26 RS_232.....	207
E.27 SQUARE_WAVE<type: Current Voltage Power>	208
E.28 SSR_INTERROGATION<type: Voltage Current Power>.....	210
E.29 SSR_RESPONSE<type: Voltage Current Power>	213
E.30 STEP_SIGNAL.....	217
E.31 SUP_CAR_SIGNAL.....	219
E.32 SYNCHRO.....	221
E.33 TACAN	225

E.34 TRIANGULAR_WAVE_SIGNAL<type: Voltage Current Power>	229
E.35 VOR	231
Annex F (informative) Test signal framework (TSF) library for digital pulse classes	235
F.1 Introduction	235
F.2 TSF library definition in extensible markup language (XML)	235
F.3 Graphical models of TSFs	235
F.4 Pulse class family of TSFs	235
F.5 DTIF	252
Annex G (normative) Carrier language requirements	254
G.1 Carrier language requirements	254
G.2 Interface definition language (IDL)	254
G.3 Datatypes	254
G.4 Data-processing requirements	259
G.5 Control structures	263
Annex H (normative) Test procedure language (TPL)	265
H.1 TPL layer	265
H.2 Elements of the TPL	265
H.3 Structure of test requirements	265
H.4 Carrier language	265
H.5 Signal statements	265
H.6 Mapping of test statements to carrier language	267
H.7 Test statement definitions	267
H.8 Elements used in test statement definitions	285
H.9 Attributes with multiple properties	288
H.10 Transferring data in digital signals	292
H.11 Creating test requirements	296
H.12 Delimiting TPL statements	298
Annex I (normative) Extensible markup language (XML) signal descriptions	300
I.1 Introduction	300
I.2 XSD for BSCs	301
I.3 XSD for TSFs	302
Annex J (informative) Support for ATLAS nouns and modifiers	308
J.1 Signal and test definition (STD) support for ATLAS signals	308
J.2 STD support for ATLAS nouns	308
J.3 STD support for C/ATLAS noun modifiers	311
J.4 Support for C/ATLAS extensions	319
Annex K (informative) Guide for maximizing test platform independence and test application interchangeability	320
K.1 Introduction	320
K.2 Guiding principles	320
K.3 Best practice rules	320
Annex L (informative) Bibliography	323
Annex M (informative) IEEE List of Participants	325

Standard for Signal and Test Definition

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation.

IEEE Standards documents are developed within IEEE Societies and Standards Coordinating Committees of the IEEE Standards Association (IEEE-SA) Standards Board. IEEE develops its standards through a consensus development process, which brings together volunteers representing varied viewpoints and interests to achieve the final product. Volunteers are not necessarily members of IEEE and serve without compensation. While IEEE administers the process and establishes rules to promote fairness in the consensus development process, IEEE does not independently evaluate, test, or verify the accuracy of any of the information contained in its standards. Use of IEEE Standards documents is wholly voluntary. IEEE documents are made available for use subject to important notices and legal disclaimers (see <http://standards.ieee.org/IPR/disclaimers.html> for more information).

IEC collaborates closely with IEEE in accordance with conditions determined by agreement between the two organizations.

- 2) The formal decisions of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees. The formal decisions of IEEE on technical matters, once consensus within IEEE Societies and Standards Coordinating Committees has been reached, is determined by a balanced ballot of materially interested parties who indicate interest in reviewing the proposed standard. Final approval of the IEEE standards document is given by the IEEE Standards Association (IEEE-SA) Standards Board.
- 3) IEC/IEEE Publications have the form of recommendations for international use and are accepted by IEC National Committees/IEEE Societies in that sense. While all reasonable efforts are made to ensure that the technical content of IEC/IEEE Publications is accurate, IEC or IEEE cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications (including IEC/IEEE Publications) transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC/IEEE Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC and IEEE do not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC and IEEE are not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or IEEE or their directors, employees, servants or agents including individual experts and members of technical committees and IEC National Committees, or volunteers of IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association (IEEE-SA) Standards Board, for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC/IEEE Publication or any other IEC or IEEE Publications.
- 8) Attention is drawn to the normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that implementation of this IEC/IEEE Publication may require use of material covered by patent rights. By publication of this standard, no position is taken with respect to the existence or validity of any patent rights in connection therewith. IEC or IEEE shall not be held responsible for identifying Essential Patent Claims for which a license may be required, for conducting inquiries into the legal validity or scope of Patent Claims or determining whether any licensing terms or conditions provided in connection with submission of a Letter of Assurance, if any, or in any licensing agreements are reasonable or non-discriminatory. Users of this standard are expressly advised that determination of the validity of any patent rights, and the risk of infringement of such rights, is entirely their own responsibility.

International Standard IEC 62529 / IEEE Std 1641-2010 has been processed through IEC technical committee 93: Design automation, under the IEC/IEEE Dual Logo Agreement.

This second edition cancels and replaces the first edition, published in 2007, and constitutes a technical revision.

The text of this standard is based on the following documents:

IEEE Std	FDIS	Report on voting
IEEE Std 1641-2010	93/322/FDIS	93/329/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

The IEC Technical Committee and IEEE Technical Committee have decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

IEEE Standard for Signal and Test Definition

Sponsor

**IEEE Standards Coordinating Committee 20 on
Test and Diagnosis for Electronic Systems**

Approved 17 June 2010

IEEE-SA Standards Board

Abstract: This standard provides the means to define and describe signals used in testing. It also provides a set of common basic signals, built upon formal mathematical specifications so that signals can be combined to form complex signals usable across all test platforms.

Keywords: ATE, ATLAS, automatic test equipment, IEEE 1641, signal definitions, test definitions, test requirements, test signals, unit under test, UUT

IEEE Introduction

This introduction is not part of IEEE Std 1641-2010, IEEE Standard for Signal and Test Definition.

This signal and test definition (STD) standard provides the ability to unambiguously define test signals. It includes a rigorous mathematical and definitive foundation for all of its signal components. Any signal defined using this standard will be the same regardless of the equipment is used to create it. The standard supports the implementation of new technologies by providing users with the ability to describe their own signals by combining existing signals. Thus, any desired signal may be described, and there is no limit on the extensibility of signals supported by this standard.

Signals defined using this standard can be used in a programming environment of the user's choice provided that that environment fulfills the minimum requirements defined in this standard. This universality enables the user to take full advantage of modern program structures and development environments, including graphical programming environments.

This standard was developed by the Test and ATS Description Subcommittee (of the IEEE Standards Coordinating Committee 20 (SCC20) on Test and Diagnosis for Electronic Systems), which has prepared a companion guide, IEEE Std 1641.1™, to explain how to implement signal definitions and test requirements in conformance with STD.

Notice to users

Laws and regulations

Users of these documents should consult all applicable laws and regulations. Compliance with the provisions of this standard does not imply compliance to any applicable regulatory requirements. Implementers of the standard are responsible for observing or referring to the applicable regulatory requirements. IEEE does not, by the publication of its standards, intend to urge action that is not in compliance with applicable laws, and these documents may not be construed as doing so.

Copyrights

This document is copyrighted by the IEEE. It is made available for a wide variety of both public and private uses. These include both use, by reference, in laws and regulations, and use in private self-regulation, standardization, and the promotion of engineering practices and methods. By making this document available for use and adoption by public authorities and private users, the IEEE does not waive any rights in copyright to this document.

Updating of IEEE documents

Users of IEEE standards should be aware that these documents may be superseded at any time by the issuance of new editions or may be amended from time to time through the issuance of amendments, corrigenda, or errata. An official IEEE document at any point in time consists of the current edition of the document together with any amendments, corrigenda, or errata then in effect. In order to determine whether

a given document is the current edition and whether it has been amended through the issuance of amendments, corrigenda, or errata, visit the IEEE Standards Association web site at <http://ieeexplore.ieee.org/xpl/standards.jsp>, or contact the IEEE at the address listed previously.

For more information about the IEEE Standards Association or the IEEE standards development process, visit the IEEE-SA web site at <http://standards.ieee.org>.

Errata

Errata, if any, for this and all other standards can be accessed at the following URL: <http://standards.ieee.org/reading/ieee/updates/errata/index.html>. Users are encouraged to check this URL for errata periodically.

Interpretations

Current interpretations can be accessed at the following URL: <http://standards.ieee.org/reading/ieee/interp/index.html>.

Patents

Attention is called to the possibility that implementation of this standard may require use of subject matter covered by patent rights. By publication of this standard, no position is taken with respect to the existence or validity of any patent rights in connection therewith. The IEEE is not responsible for identifying Essential Patent Claims for which a license may be required, for conducting inquiries into the legal validity or scope of Patents Claims or determining whether any licensing terms or conditions provided in connection with submission of a Letter of Assurance, if any, or in any licensing agreements are reasonable or nondiscriminatory. Users of this standard are expressly advised that determination of the validity of any patent rights, and the risk of infringement of such rights, is entirely their own responsibility. Further information may be obtained from the IEEE Standards Association.

Standard for Signal and Test Definition

***IMPORTANT NOTICE:** This standard is not intended to ensure safety, security, health, or environmental protection. Implementers of the standard are responsible for determining appropriate safety, security, environmental, and health practices or regulatory requirements.*

This IEEE document is made available for use subject to important notices and legal disclaimers. These notices and disclaimers appear in all publications containing this document and may be found under the heading “Important Notice” or “Important Notices and Disclaimers Concerning IEEE Documents.” They can also be obtained on request from IEEE or viewed at <http://standards.ieee.org/IPR/disclaimers.html>.

1. Overview

1.1 Scope

This standard provides the means to define and describe signals used in testing. It provides a set of common basic signal definitions, built upon formal mathematical specifications, so that signals can be combined to form complex signals usable across all test platforms. The standard provides support for structural textual languages and programming language interfaces for interoperability.

1.2 Purpose

This standard provides a common reference for signal definitions, which may be used throughout the life cycle of a unit under test (UUT) or test system. Such a reference will in turn facilitate information transfer, test reuse, and broader application of test information—accessible through commercially available development tools.

1.3 Application

This signal and test definition (STD) standard provides the capability to describe and control signals, while permitting a choice of operating environment, including the choice of carrier language. STD permits signal operations to be embedded in any object-oriented environment and thus to be used by the architecture

standards of various automatic test systems (ATs). STD may be used to create truly portable test requirements. It will allow test information to pass more freely between the design, test, and maintenance phases of a project and enable the same information to be used directly across project phases. This more efficient use of information will lead to reduced life-cycle costs.

1.4 Annexes

This standard also contains annexes that describe various elements of the standard in detail. The normative annexes include definitions of the basic signals (in words and with reference to an extensible markup language (XML) format), supporting mathematical definitions for these signals, dynamic model information, interface definition descriptions, and a definition of the requirements of a supporting computer language.

Informative annexes are provided to present examples of signal libraries together with their associated XML definition.
