## CONTENTS

FOREWORD.....	3
INTRODUCTION.....	5
1 Scope.....	6
2 Normative references .....	6
3 Terms and definitions .....	6
4 Measurement methods .....	7
4.1 General.....	7
4.2 Process for projected angle using one double flash drop watcher (method 1).....	7
4.3 Process for projected angle using one single flash drop watcher (method 2).....	8
4.4 Process for projected angle using one strobe flash drop watcher (method 3) .....	8
4.5 Process for trajectory angles using two double flash drop watchers (method 4) .....	8
4.6 Process for trajectory angles using two single flash drop watchers (method 5) .....	8
4.7 Process for trajectory angles using two strobe flash drop watchers (method 6) .....	8
Annex A (informative) Determination of jetted drop direction .....	9
A.1 Imaging-based measurements of jetted drop direction .....	9
A.2 Formulae used for imaging results from the measurements.....	13
A.2.1 Formulae for projected angle using one double flash drop watcher (method 1).....	13
A.2.2 Formulae for projected angle using one single flash drop watcher (method 2).....	13
A.2.3 Formulae for projected angle using one strobe drop watcher (method 3) .....	13
A.2.4 Formulae for trajectory angles using two double flash drop watchers (method 4).....	14
A.2.5 Formulae for measured trajectory angles using two single flash drop watchers (method 5).....	15
A.2.6 Formulae for measured trajectory angles using two strobe flash drop watchers (method 6).....	17
A.3 Recording .....	18
Bibliography.....	20
Figure A.1 – Schematic representation of jetted drop positions below a jetting nozzle (0) for double flash (1-2), single flash (1-2') and strobe flash (1"-2") at different delays.....	10
Figure A.2 – Schematic representation of a) the projected angle $\delta$ in 2-D and b) the trajectory angles $\theta$ and $\psi$ in 3-D .....	11
Figure A.3 – Example of two orthogonally-mounted in-flight imaging drop watchers .....	12

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**PRINTED ELECTRONICS –**

**Part 302-3: Equipment – Inkjet –  
Imaging-based measurement of drop direction**

**FOREWORD**

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 62899-302-3 has been prepared by IEC technical committee 119: Printed Electronics.

The text of this International Standard is based on the following documents:

FDIS	Report on voting
119/332/FDIS	119/344/RVD

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC 62899 series, published under the general title *Printed electronics*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

**IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**

## INTRODUCTION

Establishing the jetted drop direction under specific operating conditions of inks and inkjet print-heads is significant for accurate drop placement during the manufacture of printed electronics. Manufacturers that include such print-heads in their equipment should know the angular spread of ink drop directions because this influences the achievable spatial resolution of the printed material, and in particular whether any neighbouring conducting tracks could be connected by stray materials, which would affect the printed electronics' product performance. This document defines the methods for in-flight imaging measurement of jetted drop direction from drop-on-demand type inkjet print-heads to be used in printed electronics equipment.

## PRINTED ELECTRONICS –

### Part 302-3: Equipment – Inkjet – Imaging-based measurement of drop direction

#### 1 Scope

This part of IEC 62899 specifies in-flight imaging methods for the measurement of the direction of ink drops jetted from inkjet print-heads using drop watchers. It does not apply to holographic or other interference techniques, or to any method assessing deposited ink drops. It is specific to drop-on-demand type inkjet print-heads (used in printed electronics equipment).

#### 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 62899-302-1, *Printed electronics – Equipment – Inkjet – Imaging based measurement of jetting speed*
