CONTENTS

FOREWORD.....	12
1 Scope.....	14
2 Normative references	14
3 Terms, definitions, abbreviated terms, and conventions	14
3.1 Terms and definitions.....	14
3.2 Abbreviated terms.....	17
3.3 Conventions.....	19
4 Data coding	20
4.1 Overview.....	20
4.2 Basic data type coding	21
4.2.1 Integer coding.....	21
4.2.2 Unsigned coding	21
4.2.3 Float coding.....	22
4.2.4 Octetstring coding	23
4.2.5 BitField coding.....	23
4.2.6 Bitstring coding.....	24
4.2.7 TimeData coding	24
4.2.8 KeyData coding	25
4.3 Structured data type coding	25
4.3.1 Structure type coding.....	25
4.3.2 List type coding	25
5 WIA-FA overview	25
5.1 Device types	25
5.1.1 General	25
5.1.2 Host computer	25
5.1.3 Gateway device	25
5.1.4 Access device	26
5.1.5 Field device	26
5.1.6 Handheld device.....	26
5.2 Network topology	26
5.3 Protocol architecture.....	27
6 System management	29
6.1 Overview.....	29
6.2 Device Management Application Process.....	30
6.2.1 General	30
6.2.2 Network manager	32
6.2.3 Security manager	32
6.2.4 Network management module.....	32
6.2.5 Security management module.....	32
6.2.6 DMAP state machines	32
6.3 Addressing and address assignment.....	44
6.4 Communication resource allocation.....	45
6.4.1 General	45
6.4.2 Communication resource allocation	45
6.5 Joining and leave process of field device	46
6.5.1 Join process of a field device.....	46

6.5.2	Communication resource allocation to field device	47
6.5.3	Leaving process of a field device	48
6.6	Network performance monitoring.....	49
6.6.1	Device status report.....	49
6.6.2	Channel condition report.....	50
6.7	Management information base and services.....	50
6.7.1	Management information base	50
6.7.2	MIB services.....	61
7	Physical layer	64
7.1	General.....	64
7.2	General requirements based on IEEE STD 802.11-2012	64
7.3	Additional requirements	65
7.3.1	General	65
7.3.2	Frequency band.....	65
7.3.3	Channel bitmap	65
7.3.4	Transmit power.....	67
7.3.5	Data rate	67
8	Data Link Layer	67
8.1	General.....	67
8.1.1	DLL functions	67
8.1.2	Protocol architecture.....	67
8.1.3	WIA-FA superframe	68
8.1.4	Communication based on multiple access devices	70
8.1.5	Time synchronization	72
8.1.6	Frame aggregation/disaggregation.....	73
8.1.7	Fragmentation and reassembly.....	74
8.1.8	Retransmission.....	74
8.2	Data link sub-layer data services	77
8.2.1	General	77
8.2.2	DLDE-DATA.request primitive.....	77
8.2.3	DLDE-DATA.indication primitive	78
8.2.4	Time sequence of DLL data service	79
8.3	Data link sub-layer management services	80
8.3.1	General	80
8.3.2	Network discovery services	81
8.3.3	Time synchronization services	83
8.3.4	Device joining services	85
8.3.5	Device status report services.....	88
8.3.6	Channel condition report services	90
8.3.7	Remote attribute get services	92
8.3.8	Remote attribute set services	96
8.3.9	Device leaving services	100
8.4	DLL frame formats	102
8.4.1	General frame format.....	102
8.4.2	Date frame format.....	103
8.4.3	Aggregation frame format	104
8.4.4	NACK frame format	104
8.4.5	GACK frame format	104
8.4.6	Beacon frame format	105

8.4.7	Join request frame format	106
8.4.8	Join response frame format	106
8.4.9	Leave request frame format	106
8.4.10	Leave response frame format	106
8.4.11	Device status report frame format	106
8.4.12	Channel condition report frame format	107
8.4.13	Time synchronization request frame format	107
8.4.14	Time synchronization response frame format	107
8.4.15	Remote attribute get request frame format	107
8.4.16	Remote attribute get response frame format	108
8.4.17	Remote attribute set request frame format	108
8.4.18	Remote attribute set response frame format	109
8.5	Data link layer state machines	109
8.5.1	DLL state machine of access device	109
8.5.2	DLL state machine of field device	117
8.5.3	Functions used in DLL state machines	123
9	Wired specifications between GW and AD	124
9.1	Overview	124
9.2	Join process of access device	124
9.3	Frame formats between GW and AD	124
9.4	Communication based on multiple access device	127
10	Application Layer	127
10.1	Overview	127
10.2	AL protocol stack	127
10.3	AL functions	128
10.3.1	Data functions	128
10.3.2	Management functions	128
10.3.3	Communication models	129
10.4	Application data	129
10.4.1	General	129
10.4.2	Attribute data	129
10.4.3	Process data	129
10.4.4	Event data	130
10.5	User application process	131
10.5.1	General	131
10.5.2	User application object	132
10.5.3	IO data image on gateway device	132
10.5.4	Alarm mechanism	133
10.5.5	Application configuration	134
10.6	Application services	140
10.6.1	Confirmed services and unconfirmed services	140
10.6.2	Read service	141
10.6.3	Write service	143
10.6.4	Publish service	144
10.6.5	Report service	145
10.6.6	Report ACK service	146
10.6.7	Start service	147
10.6.8	Stop service	148
10.7	Application sub-layer	149

10.7.1	Overview	149
10.7.2	ASL data service	149
10.7.3	ASL management service	152
10.7.4	ASL message format	153
11	Security	172
11.1	General.....	172
11.1.1	Security management architecture.....	172
11.1.2	Security functions	174
11.1.3	Keys	174
11.2	Security services	175
11.2.1	General	175
11.2.2	Key establish service	175
11.2.3	Key update service	178
11.2.4	Security alarm service	180
11.3	Secure join	181
11.3.1	General	181
11.3.2	Secure join process of FD.....	182
11.4	Key management	183
11.4.1	General	183
11.4.2	Key establish process.....	183
11.4.3	Key update process	184
11.5	DLL secure communication	186
11.6	Security alarm.....	187
11.7	Secure frame format	187
11.7.1	General secure DLL frame format	187
11.7.2	Secure aggregation frame format.....	188
11.7.3	Key establish request frame format.....	188
11.7.4	Key establish response frame format	189
11.7.5	Key update request frame format	189
11.7.6	Key update response frame format	189
11.7.7	Security alarm request frame format	190
Annex A	(informative) Security strategy for WIA-FA network	191
A.1	Risk analysis for WIA-FA network	191
A.2	Security principles for WIA-FA network	191
A.3	Security objectives for WIA-FA network	191
A.4	Security grade of WIA-FA network	191
Annex B	(informative) Regional modification for compliance with ETSI standards	193
B.1	General.....	193
B.2	Compliance with ETSI EN 300 440-2 V1.4.1	193
B.3	Compliance with ETSI EN 300 328V1.9.1.....	193

INTERNATIONAL ELECTROTECHNICAL COMMISSION

INDUSTRIAL NETWORKS – WIRELESS COMMUNICATION NETWORK AND COMMUNICATION PROFILES – WIA-FA

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 62948 has been prepared by subcommittee 65C: Industrial networks, of IEC technical committee 65: Industrial-process measurement, control and automation. The text of this standard is based on the following documents:

This first edition cancels and replaces the IEC PAS 62948 published in 2015. This edition constitutes a technical revision.

The text of this standard is based on the following documents:

FDIS	Report on voting
65C/877/FDIS	65C/885/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INDUSTRIAL NETWORKS – WIRELESS COMMUNICATION NETWORK AND COMMUNICATION PROFILES – WIA-FA

1 Scope

This International Standard specifies the system architecture and communication protocol of WIA-FA (Wireless Networks for Industrial Automation – Factory Automation) based on IEEE STD 802.11-2012 physical layer (PHY).

This document applies to wireless network systems for factory automation measuring, monitoring and control.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 61588, *Precision clock synchronization protocol for networked measurement and control systems*

IEEE STD 802.11-2012, *IEEE Standard for Information technology – Telecommunications and information exchange between systems – Local and metropolitan area networks – Specific requirements – Part 11: Wireless LAN Medium Access Control (MAC) and Physical Layer (PHY) specifications*
