## CONTENTS

FOREWORD.....	4
INTRODUCTION.....	6
1 Scope.....	7
2 Normative references .....	7
3 Terms, definitions and abbreviated terms .....	7
3.1 Terms and definitions.....	7
3.2 Abbreviated terms.....	8
4 Practical applications.....	8
4.1 List of applications .....	8
4.2 Antenna gain measurement system using a radio-over-fibre transceiver .....	8
4.2.1 Overview .....	8
4.2.2 Features .....	8
4.2.3 System configuration .....	9
4.2.4 Example of measurement results .....	12
4.3 Millimetre-wave antenna pattern measurement system using a nested type LN-MZM and a UTC-PD .....	14
4.3.1 Overview .....	14
4.3.2 Features .....	15
4.3.3 System configuration .....	15
4.3.4 Specifications .....	17
4.3.5 Example of measurement results .....	18
4.4 Very-near-field antenna pattern measurement using a photonic sensor.....	19
4.4.1 Overview .....	19
4.4.2 Features .....	19
4.4.3 System configuration .....	20
4.4.4 Specifications .....	22
4.4.5 Example of measurement results .....	23
Bibliography.....	25
Figure 1 – System configuration of antenna gain measurement system using a radio-over-fibre transceiver .....	9
Figure 2 – System configuration of antenna gain measurement system using bi-directional type radio-over-fibre transceiver specifications .....	10
Figure 3 – Appearance of a pair of radio-over-fibre transceivers .....	12
Figure 4 – $S_{21}(\omega)$ measurement result of two LPDAs .....	13
Figure 5 – Measurement gain of LPDA using a radio-over-fibre transceiver .....	14
Figure 6 – $S_{21}(\omega)$ measurement result of two VULB9160s.....	14
Figure 7 – System configuration for mm-wave antenna pattern measurement system using nested type LN-MZM and UTC-PD.....	16
Figure 8 – Appearance of mm-wave antenna pattern measurement system using nested type LN-MZM and UTC-PD .....	16
Figure 9 – Appearance of mm-wave transmitting part of mm-wave antenna pattern measurement system using nested type LN-MZM and UTC-PD.....	17
Figure 10 – Frequency characteristics and dynamic range of system using a nested LN-MZM modulator and a UTC-PD.....	18
Figure 11 – Measured antenna radiation pattern in the E-plane at 120 GHz.....	19

Figure 12 – System configuration of planar very-near-field antenna pattern measurement system using a photonic sensor .....	20
Figure 13 – System configuration of cylindrical very-near-field antenna pattern measurement system using a photonic sensor .....	21
Figure 14 – System configuration of spherical very-near-field antenna pattern measurement system using a photonic sensor .....	21
Figure 15 – Appearance of very-near-field antenna pattern measurement system using an LN-MZM photonic sensor .....	22
Figure 16 – Photonic sensor using an LN-MZM .....	22
Figure 17 – Measured and calculated near-field electric field distribution using planar very-near-field antenna pattern measurement system using an LN-MZM photonic sensor .....	23
Figure 18 – E-plane antenna pattern of Horn-antenna measured by planar very-near-field antenna pattern measurement system using an LN-MZM photonic sensor .....	24
Table 1 – Specification of a radio-over-fibre transceiver .....	11

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

---

### **TRANSMITTING EQUIPMENT FOR RADIOCOMMUNICATION – RADIO-OVER-FIBRE TECHNOLOGIES FOR ELECTROMAGNETIC-FIELD MEASUREMENT –**

#### **Part 1: Radio-over-fibre technologies for antenna measurement**

#### **FOREWORD**

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

The main task of IEC technical committees is to prepare International Standards. However, a technical committee may propose the publication of a Technical Report when it has collected data of a different kind from that which is normally published as an International Standard, for example "state of the art".

IEC TR 63099-1, which is a Technical Report, has been prepared by IEC technical committee 103: Transmitting equipment for radiocommunication.

The text of this Technical Report is based on the following documents:

Enquiry draft	Report on voting
103/156/DTR	103/162/RVDTR

Full information on the voting for the approval of this Technical Report can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

**IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**

## INTRODUCTION

This document provides information on the current and latest applications for antenna measurement using radio-over-fibre technology. Antenna gain and antenna pattern measurement systems are covered, which are practically in use or will be used soon. It will be beneficial to system developers and system users in the fields of antenna measurement. As a Technical Report, this document contains no requirements and is informative only.

# **TRANSMITTING EQUIPMENT FOR RADIOCOMMUNICATION – RADIO-OVER-FIBRE TECHNOLOGIES FOR ELECTROMAGNETIC-FIELD MEASUREMENT –**

## **Part 1: Radio-over-fibre technologies for antenna measurement**

### **1 Scope**

The purpose of this document is to provide information about the current and latest applications for antenna measurement that use radio-over-fibre technologies. Antenna gain and the antenna radiation pattern measurement system are covered, which are practically in use and will be used soon. Basic concepts, system configurations and measurement examples of the systems are included. The theoretical background of antenna measurement is beyond the scope of this document.

### **2 Normative references**

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEEE Std. 145-2013, *IEEE Standard for Definitions of Terms for Antennas*
