FINAL DRAFT INTERNATIONAL STANDARD (FDIS)

PROJECT NUMBER:	
IEC 62676-6 ED1	
DATE OF CIRCULATION:	CLOSING DATE FOR VOTING:
2024-04-19	**2024-05-31**
SUPERSEDES DOCUMENTS:	
79/650/CDV, 79/686/RVC	

IEC TC 79 : ALARM AND ELECTRONIC SECURITY SYSTEMS

SECRETARIAT:	SECRETARY:
France	Mr Jean-François LIGNEREUX
OF INTEREST TO THE FOLLOWING COMMITTEES:	HORIZONTAL STANDARD:
	☐

FUNCTIONS CONCERNED:

☐ EMC ☐ ENVIRONMENT ☐ QUALITY ASSURANCE ☐ SAFETY

☒ SUBMITTED FOR CENELEC PARALLEL VOTING	☐ NOT SUBMITTED FOR CENELEC PARALLEL VOTING
Attention IEC-CENELEC parallel voting The attention of IEC National Committees, members of CENELEC, is drawn to the fact that this Final Draft International Standard (FDIS) is submitted for parallel voting. The CENELEC members are invited to vote through the CENELEC online voting system.	

This document is a draft distributed for approval. It may not be referred to as an International Standard until published as such.

In addition to their evaluation as being acceptable for industrial, technological, commercial and user purposes, Final Draft International Standards may on occasion have to be considered in the light of their potential to become standards to which reference may be made in national regulations.

Recipients of this document are invited to submit, with their comments, notification of any relevant patent rights of which they are aware and to provide supporting documentation.

Recipients of this document are invited to consider for future work to include relevant “In Some Countries” clauses. Recipients are reminded that the CDV stage is the final stage for submitting ISC clauses. (See AC/22/2007 or new GUIDANCE DOC).

TITLE:

Video surveillance systems for use in security applications – Part 6: Performance testing and grading of real-time intelligent video content analysis devices and systems for use in video surveillance applications

PROPOSED STABILITY DATE: 2026

NOTE FROM TC/SC OFFICERS:

Project delayed due to low availability of the Project Leader. The Stability date has been changed from 2024 to 2026 for consistency with publication date.

CONTENTS

FOREWORD 12
INTRODUCTION 14
1 Scope 15
2 Normative references 15
3 Terms, definitions and abbreviated terms 16
3.1 Terms and definitions 16
3.2 Abbreviated terms 24
4 Overview of VCA capable systems test procedures (normative) 25
5 Description of VCA working principles and specifications (informative) 26
5.1 General 26
5.2 Application of this document by the industry 27
5.2.1 Industry users 27
5.2.2 What can industry participants do with this document 27
5.2.3 Critical operating parameters 27
5.2.4 Video-input quality 27
5.2.5 Testing criteria 27
5.2.6 Table of environmental scenarios 27
5.2.7 Degrees of Difficulty (DoD) 28
5.2.8 Testing setup configuration with no ground truth 29
5.2.9 Testing setup configuration with ground truth 29
5.3 Categories of testing 30
5.3.1 Performance testing details 30
5.3.2 Grading criteria levels 30
5.4 Working principles of the performance test and grading system 30
5.5 Video format and system requirements 31
5.6 Typical analysis categorisation 31
5.6.1 General 31
5.6.2 Event detection scenarios 32
5.6.3 Standardised classification for VCA certification tests 33
5.7 Performance testing methodology 34
5.8 Grading methodology 34
5.9 Criteria to be considered when using this document 34
5.9.1 General 34
5.9.2 Light requirements 34
5.9.3 Cameras 35
5.9.4 Recorded footage 35
5.9.5 Normalised input video signal 35
5.10 Target analysis 35
5.11 Event analysis 35
5.12 VCA test scenarios with recommended and applicable predefined test-sequences 35
6 VCA performance requirements and measurements (normative) 35
6.1 General 35
6.2 XML indexing schema 36
6.2.1 General 36

This is a preview - click here to buy the full publication

6.2.2 Ground truth 37
6.2.3 XML messaging structure – XML indexing schema 37
6.3 Event detection scenarios 37
6.3.1 File and folder structure 37
6.3.2 Scenario definition file 37
6.3.3 Alarm definitions 37
6.3.4 Video footage – simulation of test scenes 38
6.4 Functional test framework 38
6.4.1 General 38
6.4.2 Real-time video analysis based on newer learning technology 39
6.4.3 Video description data output 39
6.4.4 System Alarm (SA) 42
6.5 Performance testing methodology 44
6.6 Grading methodology 44
6.7 Prerequisites to proper application of this document 45
6.7.1 Light requirements 45
6.7.2 Cameras 45
6.7.3 Recorded footage 45
6.8 Test sequence procedures and methods 45
6.8.1 General 45
6.8.2 Customer requirement tests (conformity) descriptions 45
6.8.3 Real-time intelligent video analysis test 46
6.8.4 Video description data output test 46
6.8.5 Alarm input and output test 46
6.8.6 Video output test 46
6.8.7 Video abnormality detection test 46
6.8.8 Device configuration test 46
6.8.9 Self-detection test 46
6.8.10 Factory default settings restoration test 46
6.8.11 Performance testing procedures 47
6.9 Automating the performance testing and grading process 47
6.10 Testing criteria and pre-requisites 48
6.10.1 Moving object detection 48
6.10.2 Unattended object detection 49
6.10.3 Object removal detection 49
6.10.4 Line crossing detection 50
6.10.5 Intrusion detection 50
6.10.6 Wrong direction motion detection 51
6.10.7 Loitering detection 51
6.10.8 Counting (flow) statistics 52
6.10.9 Density detection 52
6.10.10 Object classification 53
6.11 Sterile zone performance 53
6.12 Non-sterile zones 53
6.13 Tolerance to atmospheric interference 54
6.14 Training, test and evaluation video footage datasets 54
6.15 Translating specifications into XML – "Ground Truth" templates 54
6.16 Methods that can be used to test performance 54
6.16.1 When the specification is known 54

This is a preview - click here to buy the full publication

6.16.2 When the specification is not known 54
7 Typical scenario performance criteria 55
7.1 Sterile zone performance 55
7.2 Non-sterile zones 56
7.3 Tolerance to atmospheric interference 56
8 Core and complex scenario detection messaging 56
8.1 General 56
8.2 XML indexing schema 56
9 VCA object-scenario detection specification in textual format (with examples) 57
9.1 General 57
9.2 Translating specifications into XML – "Ground Truth" templates 57
10 System grading methodology 58
11 Automating the performance testing and grading process 58
12 Scenario evaluation criteria 58
12.1 General 58
12.2 Training, test and evaluation datasets 58
12.3 Typical analysis categorisation 59
12.3.1 General 59
12.3.2 Scenario creation and event etection 59
12.3.3 Standardized classification for VCA certification tests 60
13 Data and XML structure 61
13.1 General 61
13.2 Event detection scenarios 61
13.2.1 File and folder structure on hard drives 61
13.2.2 Scenario definition file 61
13.2.3 Alarm definitions 61
13.2.4 XML indexing schema 61
13.2.5 Video folder 61
13.2.6 Ground Truth (see Annex N) 61
13.2.7 Video database 62
13.2.8 Video footage library (see Annex N) 62
13.3 Functional requirements 62
13.3.1 Real-time intelligent video analysis 62
13.3.2 Video description data output 62
13.3.3 Alarm input and output 62
13.4 Video output 62
13.5 Video abnormality detection 62
13.6 Parameter configuration 62
13.7 Self-inspection 63
13.8 Restoration of factory default settings 63
13.9 Test sequence procedures and methods 63
13.9.1 General 63
13.9.2 Performance test 64
13.9.3 Moving object detection 65
13.9.4 Unattended object detection 65
13.9.5 Object removal detection 65
13.9.6 Line crossing detection 65
13.9.7 Intrusion detection 65

This is a preview - click here to buy the full publication

13.9.8 Wrong direction (motion detection) 65
13.9.9 Loitering detection 65
13.9.10 Count (statistics) 66
13.9.11 Crowd detection 66
13.9.12 Object classification 66
14 System evaluation 66
14.1 VCA tests and trials 66
14.2 Business process workflow for credible accreditation process 66
14.3 Sterile zone test process (workflow) diagram (see Figure 14) 68
14.4 Non-sterile zone test process (workflow) diagram 70
14.5 Demonstration of the performance test process (results) 72
14.6 Techniques used currently in country specific testing of VCA systems 72
14.7 Evaluation score threshold examples 73
15 Evaluation procedure 74
15.1 General 74
15.2 Event detection 74
15.3 Object tracking 74
16 Evaluation method and criteria (contribution by Korea) 74
16.1 General 74
16.2 Event detection functional description 75
16.2.1 Loitering 75
16.2.2 Intrusion 75
16.2.3 Abandonment 75
16.3 Evaluation criteria 75
16.3.1 General 75
16.3.2 Event detection performance scoring technique (method) 76
17 Automation tools for grading 76
17.1 Table to homogenise the different video signal types 76
17.2 Test setup configuration 77
17.2.1 General 77
17.2.2 Source stream 77
17.2.3 System under test accepts source stream 77
17.2.4 Results in XML output 77
17.2.5 Results – Evaluation options 77
17.2.6 Important prior work 78
17.2.7 Configuration considerations 78
17.3 Automated spreadsheet table to tabulate results and deliver grading 80
17.4 Method of automating the performance testing and grading process 80
17.5 Grading table 81
17.6 Grading calculation table 81
Annex A (normative) List of core VCA capability 84
Annex B (normative) List of Complex VCA Capability 86
Annex C (normative) Degree of Difficulty criteria explanation 87
C.1 Degree of Difficulty levels 87
C.2 Explanation 87
C.2.1 Internal 87
C.2.2 External 87
C.2.3 Night 87

This is a preview - click here to buy the full publication

C.2.4 Cloudy (poor light and or high shadows) 87
C.2.5 Shake (Vibration and Wind shake) 87
C.2.6 Obscuration 88
C.3 Generate Alarm 88
C.4 Object Tracking 88
Annex D (informative) Real-time Video Analysis function rules 89
D.1 Description for real-time intelligent Video Analysis function rules 89
D.2 Rule capability set data 99
Annex E (informative) Definitions of data types and the coordinate system 104
E.1 Description for data types 104
E.2 Definitions of coordinates and the coordinate system 104
Annex F (informative) Video description data type 106
F.1 General 106
F.2 XML packaging example of video description data 106
Annex G (informative) Real-time intelligent analysis video footage repositories 115
G.1 Video footage repositories 115
G.2 Chinese industry repository 115
Annex H (informative) Detection and object tracking evaluation 161
H.1 General 161
H.2 Confusion matrix (a working example with “epochs” (trials) and calculated results) 161
H.3 Example of testing 161
H.4 Formulae 162
H.5 Example results from tests using the confusion matrix (iLIDS) (Table H.1 and Table H.2) 163
Annex I (informative) Frequently asked questions 164
Annex J (informative) Typical scenario definitions 166
J.1 Scenario definition 166
J.2 Doorway surveillance scenario definition 168
Annex K (informative) Performance evaluation by recording behaviour method 170
K.1 Outline 170
K.2 Korean composition and scope 170
K.3 Ground Truth 170
K.3.1 General 170
K.3.2 System Alarm 170
K.3.3 Video DATA BASE (dDatabase) 170
K.4 Performance evaluation system 170
K.5 Video transfer device 171
K.6 Intelligent video analysis system 171
K.7 Performance evaluation device 171
K.8 Method of writing system alarms 171
K.8.1 Outline 171
K.8.2 XML schema 171
K.8.3 Composition of system alarms 172
K.8.4 Details of the header 172
K.8.5 Details of the alarm 173
K.8.6 Details of AlarmDescription: for crime prevention 173
K.8.7 Example 174

Annex L (informative) XML and JSON messaging 175
L.1 XML messaging 175
L.2 XML database structure 175
L.3 Annotation guidelines 176
Annex M (informative) Electromagnetic spectrum and sensor technology 178
Annex N (informative) IEC video, communications standards applicability 181
Annex O (informative) Video footage playlist list (Korea and public) 182
O.1 Video footage library and playlist for use in testing 182
O.2 For Abandoned Baggage 184
O.3 For the new technologies dataset 185
O.4 Video folder 186
O.5 Public video databases 187
Annex P (informative) Typical certification house customer interaction workflow (Figure P.1) 188
Annex Q (informative) Example XML message creation tools 189
Q.1 VCA testing, Ground Truth, and XML messaging format creation tools 189
Q.2 GitHUB resources 189
Annex R (informative) Scenario definition examples with images and metadata (iLIDS) 190
R.1 Parked vehicle scenario definition in pictures and metadata generated 190
R.2 XML indexing schema 190
R.3 Sterile zone scenario definition 191
R.4 XML indexing schema 192
R.5 Multiple camera tracking scenario definition 192
R.5.1 General requirements for tracking 192
R.5.2 Target acquisition 192
R.6 Viper compliant XML indexing schema for MCTS ground truth 194
R.7 New technologies scenario definitions (see Figure R.4) 196
R.8 XML indexing schema 197
R.9 Illumination long wave (see Figure R.5) 199
R.10 XML indexing schema 200
R.11 Encapsulation of descriptions 202
R.12 List file 202
R.13 Ground Truth (GT) 203
R.14 System Event (Event XML File) 204
R.15 Encapsulation of video description data tables (see Table R.5 through Table R.15) 206
Annex S (informative) Depth of field considerations (camera-lens) 215
S.1 Depth of field considerations in VCA performance 215
S.2 Formulae 216
Annex T (informative) Using LED monitor as test target 218
Annex U (informative) Aperture – Sensitivity – Depth of Field and Field of View 220
Annex V (informative) Busan IEC meeting presentation 223
V.1 Demonstration setup at Busan meeting (Figure V.1) 223
V.2 Purpose of demonstration of framework 223
V.3 Creating video footage for camera with embedded Video Content Analysis 224
V.4 Referencing the test framework 225
V.4.1 General 225

INTERNATIONAL ELECTROTECHNICAL COMMISSION

_____

VIDEO SURVEILLANCE SYSTEMS FOR USE IN SECURITY APPLICATIONS –

Part 6: Performance testing and grading of real-time intelligent video content analysis devices and systems for use in video surveillance applications

FOREWORD

1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
6) All users should ensure that they have the latest edition of this publication.
7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at https://patents.iec.ch. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 62676-6 has been prepared by IEC technical committee 79: Alarm and electronic security systems. It is an International Standard.

The text of this International Standard is based on the following documents:

Draft	Report on voting
79/XX/FDIS	79/XX/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/publications.

A list of all parts in the IEC 62676 series, published under the general title *Video surveillance systems for use in security applications*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn, or
- revised.

IMPORTANT – The "colour inside" logo on the cover page of this document indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INTRODUCTION

IEC Technical Committee 79 in charge of alarm and electronic security systems together with many governmental organisations, test houses and equipment manufacturers have defined a common framework for video surveillance transmission to achieve interoperability between products.

The IEC 62676 series of standards on video surveillance system is divided into six independent parts:

Part 1: System requirements

Part 2: Video transmission protocols

Part 3: Analogue and digital video interfaces

Part 4: Application guidelines

Part 5: Data specifications and image quality performance for camera devices

Part 6: Performance testing and grading of real-time intelligent video

This document is organised as follows:

The introduction and preliminaries, such as understanding the common terms, abbreviations, etc., agreed between all regions are presented in Clause 1 to 5.10.

In Clause 6 to 6.7.3 the fundamentals of the testing framework are explained, such as the core, complex and degree of difficulty measures, the XML/JSON test data that annotates the event information and the methodology that underlines the process.

In 6.8 to 6.8.11 elements of the testing process are explained.

In 6.9 to 13.9.12 further details on the application of core, complex and application of the degree-of-difficulty are explained.

From Clause 14 to 17.6 the testing and grading aspects are explained.

Lastly the Annexes contain further information from all contributors explaining the tests, outcomes, technical basis, details of some essential processes, footage repositories and backup information that might be useful to fully exploit the offering in this document.

VIDEO SURVEILLANCE SYSTEMS FOR USE IN SECURITY APPLICATIONS –

Part 6: Performance testing and grading of real-time intelligent video content analysis devices and systems for use in video surveillance applications

1 Scope

This part of IEC 62676 specifies the functions, performance, interfaces, environmental adaptability, test methods, performance evaluation and grading rules of real-time intelligent video analysis in surveillance systems.

This document applies to live and forensic, real-time intelligent video analysis devices and systems in video surveillance.

The document is centred on testing performance and grading device functionality which enables:

- Core capability: Classification of objects, detection of specific "object activity", such as "stopping", "starting", "direction of movement", etc.
  Examples are listed in Annex A.
- Complex capability: Detection of "scenarios" which are based on combinations of object activity, such as "loitering", "perimeter intrusion detection", "person down", "tailgating", "intrusion", "abandoned object detection", explosion, fire, flood, potential terrorist attack using a vehicle, owner of an abandoned bag, etc.
  Examples of current scenarios are listed and described in Annex B.
- Degree of difficulty: The application of real operating environments to test the performance under known or required operating stress levels, examples of operating stress levels that are sterile or non-sterile, indoor or outdoor, target obscuration levels, extreme weather conditions, vibrating mechanical rugged environments causing image shake resulting in degradation of image quality requirement, see Table 1 and Annex C.

The purpose of this document is to provide end users, at different levels of the service process, from users and installers, integrators and maintenance companies, to certification providers, with methods to measure the performance of video analysis systems that must also comply with other parts of the standard.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
