IEC TC 45 : NUCLEAR INSTRUMENTATION

SECRETARIAT:

Russian Federation

SECRETARY:

Mr Sergei Shumov

OF INTEREST TO THE FOLLOWING COMMITTEES:

SC 45A, SC 45B

HORIZONTAL STANDARD:

FUNCTIONS CONCERNED:

EMC

ENVIRONMENT

QUALITY ASSURANCE

SAFETY

SUBMITTED FOR CENELEC PARALLEL VOTING

NOT SUBMITTED FOR CENELEC PARALLEL VOTING

This document is a draft distributed for approval. It may not be referred to as an International Standard until published as such.

In addition to their evaluation as being acceptable for industrial, technological, commercial and user purposes, Final Draft International Standards may on occasion have to be considered in the light of their potential to become standards to which reference may be made in national regulations.

Recipients of this document are invited to submit, with their comments, notification of any relevant patent rights of which they are aware and to provide supporting documentation.

TITLE:

**Mobile remotely controlled systems for nuclear and radiological applications – General requirements**

PROPOSED STABILITY DATE: 2024

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

### MOBILE REMOTELY CONTROLLED SYSTEMS FOR NUCLEAR AND RADIOLOGICAL APPLICATIONS – GENERAL REQUIREMENTS

#### FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 63048 has been prepared by IEC technical committee 45: Nuclear instrumentation. The text of this International Standard is based on the following documents:

Draft	Report on voting
45/XX/FDIS	45/XX/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at [www.iec.ch/members\\_experts/refdocs](http://www.iec.ch/members_experts/refdocs). The main document types developed by IEC are described in greater detail at [www.iec.ch/standardsdev/publications](http://www.iec.ch/standardsdev/publications).

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

**IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**

## INTRODUCTION

Mobile remotely controlled systems are used in areas that are difficult to access by human workers, such as high-radiation, high-temperature, high-pressure, and submerged environments.

International standards for applications other than nuclear applications, such as individual protective equipment and industrial, service-related, and medical applications, are developed within ISO TC 299.

There are a variety of mobile remotely controlled systems [14]<sup>1</sup> intended for application in various environmental conditions, namely: multifunctional mobile robot systems for the inspection and maintenance of the primary cooling water system of a nuclear power plant; shape-changing robots that serve as a remotely controlled inspection system in the primary containment vessel of a nuclear power plant; robots that inspect the reactor head and floor, underwater mobile robots that detect and remove loose parts within the reactor vessel; underwater crawling and swimming robots that serve as a remotely controlled system for feeder pipe inspection and maintenance of steam generators in an underwater environment; operation control systems for non-destructive inspections, mobile robots intended for radiation and chemicals reconnaissance and monitoring, as well as local distribution of gamma-radiation sources located in inaccessible areas; and double-arm or heavy duty robots that are used to dismantle nuclear power plants.

In this regard, it is necessary to develop technical standards that govern the design, manufacturing, interoperability, and use of mobile remotely controlled systems for nuclear applications that are suitable for various works such as the integrity inspection of nuclear components, repair of nuclear components, on-site monitoring when any abnormality or accident occurs in a nuclear facility, and nuclear decontamination and dismantling.

These technical standards concern the design, establishment, and performance of mobile remotely controlled systems and can be used to implement various important tasks and follow-up measures, such as monitoring nuclear-related activities.

To this end, general requirements for mobile remotely controlled systems have been provided for nuclear and radiological applications.

Detailed specifications of these general requirements need to be designated by manufacturers to provide support to the users of their products.

---

<sup>1</sup> Numbers in square brackets refer to the Bibliography.

## **MOBILE REMOTELY CONTROLLED SYSTEMS FOR NUCLEAR AND RADIOLOGICAL APPLICATIONS – GENERAL REQUIREMENTS**

### **1 Scope**

This document defines the general requirements for Mobile Remotely Controlled Systems (MRCSs) for nuclear and radiological applications such as integrity inspections, repair of components, handling of radioactive materials, and monitoring of physical conditions and radiation dose intensity in specific areas. (Refer to Annex A for more information regarding the main purposes of the MRCS.)

MRCS is used in the concerned area where human access is difficult or impossible during normal operation, transient and accidents, and recovery from an accident in nuclear facilities.

This document applies to MRCSs that are used to support nuclear and radiological facilities.

These general requirements encompass high-level performance requirements regarding sensors, monitoring devices, control devices, interfacing mechanisms, simulation methods, and verification methods thereof in a normal environment or extreme environmental conditions, such as high radiation, high temperature, and high humidity environments.

In this document, the term “MRCS” used hereinafter refers to a mobile remotely controlled system used for nuclear and radiological applications.

### **2 Normative references**

There are no normative references in this document.
