65A/1115/FDIS

FINAL DRAFT INTERNATIONAL STANDARD (FDIS)

PROJECT NUMBER:

IEC 63303 ED1

DATE OF CIRCULATION:

2024-04-26

CLOSING DATE FOR VOTING:

2024-06-07

SUPERSEDES DOCUMENTS:

65A/1098/CDV, 65A/1106/RVC

IEC SC 65A : SYSTEM ASPECTS	
SECRETARIAT: United Kingdom	SECRETARY: Ms Stephanie Lavy
OF INTEREST TO THE FOLLOWING COMMITTEES: TC 62	HORIZONTAL STANDARD: <input type="checkbox"/>
FUNCTIONS CONCERNED: <input type="checkbox"/> EMC <input type="checkbox"/> ENVIRONMENT <input type="checkbox"/> QUALITY ASSURANCE <input checked="" type="checkbox"/> SAFETY	
<input checked="" type="checkbox"/> SUBMITTED FOR CENELEC PARALLEL VOTING Attention IEC-CENELEC parallel voting The attention of IEC National Committees, members of CENELEC, is drawn to the fact that this Final Draft International Standard (FDIS) is submitted for parallel voting. The CENELEC members are invited to vote through the CENELEC online voting system.	<input type="checkbox"/> NOT SUBMITTED FOR CENELEC PARALLEL VOTING

This document is a draft distributed for approval. It may not be referred to as an International Standard until published as such.

In addition to their evaluation as being acceptable for industrial, technological, commercial and user purposes, Final Draft International Standards may on occasion have to be considered in the light of their potential to become standards to which reference may be made in national regulations.

Recipients of this document are invited to submit, with their comments, notification of any relevant patent rights of which they are aware and to provide supporting documentation.

Recipients of this document are invited to consider for future work to include relevant "In Some Countries" clauses. Recipients are reminded that the CDV stage is the final stage for submitting ISC clauses. (SEE [AC/22/2007](#) OR NEW [GUIDANCE DOC](#)).

TITLE:

Human machine interfaces for process automation systems

PROPOSED STABILITY DATE: 2026

INTERNATIONAL ELECTROTECHNICAL COMMISSION

HUMAN MACHINE INTERFACES FOR PROCESS AUTOMATION SYSTEMS

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://patents.iec.ch>. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 63303 has been prepared by subcommittee 65A: System aspects, of IEC technical committee 65: Industrial-process measurement, control and automation. It is an International Standard.

The text of this International Standard is based on the following documents:

Draft	Report on voting
65A/XX/FDIS	65A/XX/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/publications.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn, or
- revised.

IMPORTANT – The "colour inside" logo on the cover page of this document indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INTRODUCTION

The purpose of this document is to address the philosophy, design, implementation, operation, and maintenance of human machine interfaces (HMIs) for automation systems, including multiple work processes throughout the HMI life cycle. It is intended to help users to better understand the style of HMI recommended by this document.

It is assumed that the reader has a fundamental knowledge of basic HMI functionality.

This document was derived from ANSI/ISA-101.01-2015 Human Machine Interfaces for Process Automation Systems.

This document defines the terminology and models to develop an HMI and the work processes recommended to effectively maintain the HMI throughout its life cycle. This document can be used to:

- provide guidance to design, build, operate and maintain HMIs to achieve a safer, more effective, and more efficient control system under all operating conditions, and
- improve the user's abilities to detect, diagnose, and properly respond to abnormal situations.

The HMI is the collection of hardware and software used to monitor and interact with the control system and ultimately with the process.

In some cases, the primary user(s) operate equipment from different suppliers that have their own HMI system standards, and it is impractical to achieve uniformity across these HMI systems or the ideal adherence to the asset owner's HMI system standards.

In such cases, the asset owner should perform a formal assessment of deviations of each equipment HMI from the asset owner's HMI philosophy. This assessment should consider human factors engineering and task analysis.

The outcome of the assessment should determine if any mitigations are required to ensure the safe and efficient control of the process including start-up, operation, and shutdown, in addition to early detection, diagnosis, and proper response to abnormal situations.

The proper design and implementation of HMI systems as described in this document will result in increased efficiencies and reduced stress of the users. Other factors such as ergonomics and overall design of the control room also contribute to potential stressors that need to be managed. International Standard series ISO 11064 "Ergonomic design of control centres" has been developed to address the broader control room environment.

This document is organized into ten clauses. The first three clauses are introductory in nature. Clause 4 presents user types. Clause 5 introduces the life cycle model for the HMI. Clauses 6 through 10 provide additional details to support the HMI life cycle. The main body of this document (Clauses 4 to 10) presents mandatory requirements and non-mandatory recommendations.

HUMAN MACHINE INTERFACES FOR PROCESS AUTOMATION SYSTEMS

1 Scope

1.1 General applicability

This document defines general structures and functions of HMI systems.

An HMI life cycle example for HMI systems is included.

This document specifies requirements and recommendations for activities in each stage of the life cycle including designing, using, and maintaining the HMI system.

It also provides requirements and recommendations for functions and performance of HMI systems.

The requirements and recommendations in this document are applicable to any controlled process using an HMI to interface to a control system. There can be differences in implementation to meet the specific needs based on the application and controlled process type.

1.2 Exclusions

1.2.1 Management of change (MOC)

Some requirements and recommendations to be included in a MOC procedure are included in this document. However, a specific MOC procedure has not been included in this document.

1.2.2 Jurisdictions

In some jurisdictions, the governing authorities (e.g. national, federal, state, province, county, city) have established process safety design, process safety management, or other requirements.

1.2.3 Purchase specification

This document is not intended to be used as a human machine interface system selection or purchase specification, although at the discretion of the person specifying or requiring it, suppliers could be requested to provide an HMI system including the features mentioned herein. This document does not eliminate the need for sound engineering judgment. No HMI platform or technology is mandated nor implied.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 62381, *Automation systems in the process industry – Factory acceptance test (FAT), site acceptance test (SAT), and site integration test (SIT)*

IEC 62443 (all parts), *Security for industrial automation and control systems*
