CONTENTS

FOREWORD	4
INTRODUCTION	6
1 Scope	7
2 Normative references	7
3 Terms, definitions, symbols and abbreviations	8
3.1 Terms and definitions	8
3.2 Symbols	14
3.3 Abbreviations	15
4 General	16
4.1 Overview	16
4.2 Classification of uncertainty contributions	16
4.3 Limitations of the GUM	17
4.4 Principles	18
5 Measurement uncertainty budget development	20
5.1 Basic steps	20
5.2 Probability density functions	24
5.2.1 Rectangular	24
5.2.2 Triangular	26
5.2.3 Gaussian	28
5.2.4 U-Shape	32
5.3 Concept of Type A and Type B evaluation of uncertainty	35
5.3.1 General considerations	35
5.3.2 Type A evaluation of standard uncertainty	36
5.3.3 Type B evaluation of standard uncertainty	40
5.4 Sampling statistics	42
5.4.1 General considerations	42
5.4.2 Sample mean and sample standard deviation	42
5.4.3 Sample coefficient of variation	43
5.4.4 Limits of sample-statistical confidence intervals	43
5.4.5 Sampling distribution and sampling statistics of mean value	44
5.4.6 Sampling distribution and sampling statistics of standard deviation	47
5.5 Conversion from linear quantities to decibel and vice versa	49
5.5.1 General considerations	49
5.5.2 Normally distributed fluctuations	49
5.5.3 Uniformly distributed fluctuations	52
6 Applicability of measurement uncertainty	52
7 Documentation of measurement uncertainty calculation	56
Annex A (informative) Example of MU assessment for emission measurements	57
Annex B (informative) Example of MU assessment for an immunity test level setting	64
Bibliography	67
Figure 1 – Classification of uncertainty components associated with the experimental evaluation of uncertainty in EMC testing and measurement	16

Figure 2 – Classification of uncertainty components associated with site uncertainty (e.g. reverberation chambers).....	17
Figure 3 – Example of $g(x')$	19
Figure 4 – Impact of $g(x)$ on interpretation of x'	19
Figure 5 – Estimate returned by the measurement system	20
Figure 6 – Rectangular PDF.....	25
Figure 7 – Triangular PDF.....	27
Figure 8 – Normal PDF for standardized X	29
Figure 9 – U-shaped PDF	33
Figure 10 – Example of a circuit.....	33
Figure 11 – Limits of 95 %, 99 % and 99,5 % confidence intervals for \bar{W} as a function of N for measurements using a rectilinear antenna or single-axis probe.....	46
Figure 12 – Limits of 95 %, 99 % and 99,5 % confidence intervals for \bar{A} as a function of N for measurements using a rectilinear antenna or single-axis probe.....	47
Figure 13 – 95 % confidence intervals for S_X as a function of N for measurements using a single-axis detector	48
Figure 14 – PDF of B for a Rayleigh distributed A at selected values of σ	51
Figure 15 – Measurement uncertainty budget for a quantity to be realized in the test laboratory	53
Figure 16 – Relationship between measurement uncertainty budgets for a quantity to be realized in the test laboratory and tolerances given for this quantity in the applicable basic standard	54
Figure 17 – Situations, where and how an instrument is suitable for tests and/or measurements as specified in the applicable basic standard with tolerances	55
Figure A.1 – Deviation of the peak detector level indication from the signal level at receiver input for two cases, a sine-wave signal and an impulsive signal (PRF 100 Hz)	60
Table 1 – Basic steps for calculating MU	20
Table 2 – Expressions used to obtain standard uncertainty.....	23
Table 3 – Examples of circuit parameters	35
Table 4 – Values of the expansion coefficient $\eta(\nu)$ which transforms the standard deviation to the Type A standard uncertainty	39
Table A.1 – Radiated disturbance measurements from 1 GHz to 18 GHz in a FAR at a distance of 3 m	58
Table B.1 – Uncertainty budget of the radiated immunity test level (80 MHz – 1 000 MHz).....	65

INTERNATIONAL ELECTROTECHNICAL COMMISSION

ELECTROMAGNETIC COMPATIBILITY (EMC) –

Part 1-6: General – Guide to the assessment of measurement uncertainty

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

The main task of IEC technical committees is to prepare International Standards. However, a technical committee may propose the publication of a technical report when it has collected data of a different kind from that which is normally published as an International Standard, for example "state of the art".

IEC 61000-1-6, which is a technical report, has been prepared by the IEC technical committee 77: Electromagnetic compatibility in corporation with CISPR (International Special Committee on Radio Interference).

It forms Part 1-6 of IEC 61000. It has the status of a basic EMC publication in accordance with IEC Guide 107, *Electromagnetic compatibility – Guide to the drafting of electromagnetic compatibility publications*.

The text of this technical report is based on the following documents:

Enquiry draft	Report on voting
77/397/DTR	77/409/RVC

Full information on the voting for the approval of this technical report can be found in the report on voting indicated in the above table.

A list of all the parts of the IEC 61000 series, published under the general title *Electromagnetic compatibility (EMC)* can be found on the IEC website.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

The contents of the corrigendum of October 2014 have been included in this copy.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INTRODUCTION

IEC 61000 is published in separate parts, according to the following structure:

Part 1: General

General considerations (introduction, fundamental principles)
Definitions, terminology

Part 2: Environment

Description of the environment
Classification of the environment
Compatibility levels

Part 3: Limits

Emission limits
Immunity limits (in so far as they do not fall under the responsibility of the product committees)

Part 4: Testing and measurement techniques

Measurement techniques
Testing techniques

Part 5: Installation and mitigation guidelines

Installation guidelines
Mitigation methods and devices

Part 6: Generic standards

Part 9: Miscellaneous

Each part is further subdivided into several parts, published either as international standards or as technical specifications or technical reports, some of which have already been published as sections. Others will be published with the part number followed by a dash and a second number identifying the subdivision (example: IEC 61000-6-1).

ELECTROMAGNETIC COMPATIBILITY (EMC) –

Part 1-6: General –

Guide to the assessment of measurement uncertainty

1 Scope

This part of IEC 61000 provides methods and background information for the assessment of measurement uncertainty. It gives guidance to cover general measurement uncertainty considerations within the IEC 61000 series.

The objectives of this Technical Report are to give advice to technical committees, product committees and conformity assessment bodies on the development of measurement uncertainty budgets; to allow the comparison of these budgets between laboratories that have similar influence quantities; and to align the treatment of measurement uncertainty across the EMC committees of the IEC.

Any contributing factor to measurement uncertainty that is mentioned within this Technical Report shall be treated as an example: the technical committee responsible for the preparation of a basic immunity standard is responsible for identifying the factors that contribute to the measurement uncertainty of their basic test method.

It gives a description for

- a method for the assessment of measurement uncertainty (MU),
- mathematical formulas for probability density functions,
- analytical assessment of statistical evaluations,
- correction of measured data,
- documentation.

This Technical Report is not intended to summarize all measurement uncertainty influence quantities nor is it intended to define how measurement uncertainty is to be taken into account in determining compliance with an EMC requirement.

NOTE Some of the examples given in this report are taken from IEC publications other than the IEC 61000 series that have already implemented the evaluation procedure presented here. These examples are used to illustrate the principles.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
