## CONTENTS

FOREWORD.....	3
INTRODUCTION.....	5
1 Scope.....	6
2 Normative references .....	6
3 Terms, definitions, and abbreviated terms .....	6
3.1 Terms and definitions.....	6
3.2 Abbreviated terms.....	6
4 General .....	7
5 Configuration.....	7
5.1 EDFAs using combined single-mode pump laser diodes.....	7
5.2 Cladding pumped fibre amplifier.....	9
5.2.1 General .....	9
5.2.2 Cladding-pumped methodology.....	9
6 Test method .....	13
7 Special considerations for high-power optical amplifiers .....	14
7.1 Design considerations.....	14
7.2 Handling and safety consideration .....	14
Annex A (informative) Application of high-power OAs .....	15
A.1 General.....	15
A.2 Power amplifier for FTTH PON systems .....	15
A.3 Ultra-long-haul DWDM transport system .....	15
Annex B (informative) IEC documents on high optical power.....	16
Bibliography.....	17
Figure 1 – Schematic diagram of EDFA using multiplexed single-mode pump lasers.....	7
Figure 2 – Output characteristics of a high-power EDFA.....	8
Figure 3 – Schematic diagram of an EDFA using a cascaded Raman resonator .....	8
Figure 4 – Schematic diagram of a cladding-pumped fibre amplifier .....	9
Figure 5 – Schematic of cladding pumping.....	9
Figure 6 – Schematic structure of end-pumping .....	10
Figure 7 – Schematic structure of a fibre bundle power combiner.....	10
Figure 8 – V-groove side pumping arrangement.....	11
Figure 9 – Schematic diagram of a cross section of an example of double-cladding fibre .....	11
Figure 10 – Cross-section of the hole-assisted double cladding fibre .....	12
Figure 11 – Typical optical output power vs drive current on 980-nm multimode pump laser modules .....	12
Figure 12 – Configuration of double-cladding pumped amplifier .....	13
Figure 13 – Typical power conversion efficiency (PCE) of erbium - ytterbium co-doped double-clad (DC) fibre amplifier .....	13
Figure 14 – Test setup to measure optical output power and gain .....	14
Figure A.1 – Schematic diagram of FTTH system adapted high-power OA.....	15

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

### OPTICAL AMPLIFIERS –

### Part 8: High-power amplifiers

#### FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

The main task of IEC technical committees is to prepare International Standards. However, a technical committee may propose the publication of a Technical Report when it has collected data of a different kind from that which is normally published as an International Standard, for example "state of the art".

IEC TR 61292-8, which is a technical report, has been prepared by subcommittee 86C: Fibre optic systems and active devices, of IEC technical committee 86: Fibre optics.

Optoelectronics Industry and Technology Development Association (OITDA), Technical Paper OITDA/TP 26/AM, *General information for high power optical amplifier* has served as the basis for the elaboration of this Technical Report.

The text of this Technical Report is based on the following documents:

Draft TR	Report on voting
86C/1534/DTR	86C/1549/RVDTR

Full information on the voting for the approval of this Technical Report can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC 61292 series, published under the general title *Optical amplifiers*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

**IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**

## INTRODUCTION

Optical amplifiers (OAs) are necessary components as booster, line and pre-amplifiers for current optical network systems. IEC TC 86/SC 86C, therefore, has published many standards for OAs. Since the mid-2000s, high optical output power amplifiers have been used for applications in passive optical network (PON) and community access television (CATV) systems.

Although OAs with optical power greater than 500 mW are deployed in the field, there are very few documents addressing high optical power applications.

This document provides a better understanding of high-power amplifiers, especially those based on cladding pump technology, and addresses the handling of high optical power.

## OPTICAL AMPLIFIERS –

### Part 8: High-power amplifiers

#### 1 Scope

This document deals with high-power optical amplifiers. It provides general information relating to high-power optical amplifiers with an output power greater than 500 mW for the fibre communication field. It covers the following aspects:

- general information;
- example of the optical amplifier's configuration realizing high optical output power;
- test method for optical output power and gain;
- considerations on high-power optical amplifiers.

Potential applications of high-power optical amplifiers are briefly reviewed in Annex A.

Informative IEC documents related to high optical power are listed in Annex B.

#### 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
