CONTENTS

FOREWORD.....	5
INTRODUCTION.....	7
1 Scope.....	8
2 Normative references	8
3 Terms and definitions	8
4 Planning.....	8
4.1 General.....	8
4.2 Security and stability.....	9
4.3 Transmission systems.....	9
4.4 System voltage	10
4.5 Reliability and availability.....	10
4.6 Transmission network	11
4.7 Network requirement.....	11
4.8 Transmission planning	11
5 System design.....	11
5.1 General.....	11
5.2 System design and solutions.....	11
5.2.1 Reactive power compensation	11
5.2.2 Protection scheme	12
5.2.3 Reclosing scheme	12
5.3 Insulation coordination.....	12
5.3.1 General	12
5.3.2 Lightning overvoltage	12
5.3.3 Slow front overvoltage (SFO).....	12
5.3.4 Very fast front overvoltage (VFFO)	13
5.3.5 AC temporary overvoltage	13
6 Transmission line and substation design.....	13
6.1 General.....	13
6.2 Transmission line.....	14
6.2.1 General	14
6.2.2 Basic concept for selecting the UHV AC transmission line	14
6.2.3 Conductor design for the transmission line	14
6.2.4 Pollution design for insulators.....	14
6.2.5 Air clearance between tower and conductor.....	14
6.2.6 Right of way (ROW).....	14
6.2.7 Height of conductor	14
6.2.8 Structural tower design, foundation.....	15
6.3 Substation	15
6.3.1 Area survey and selection.....	15
6.3.2 Substation bus scheme.....	15
6.3.3 Substation switchgear type	16
6.3.4 Equipment layout.....	18
6.4 Main equipment for the substation and related design.....	19
6.4.1 General	19
6.4.2 Power transformers	19
6.4.3 Switchgear	19

6.4.4	Air clearance	19
6.4.5	Seismic performance	20
6.4.6	Tertiary circuit	20
6.4.7	Substation electrical auxiliary system	20
6.5	Control and protection and communication.....	20
7	Construction	20
7.1	General.....	20
7.2	Transmission line.....	21
7.2.1	Transportation and preparing work at site	21
7.2.2	Foundation	21
7.2.3	Assembling of tower	21
7.2.4	Stringing.....	21
7.2.5	Quality control	21
7.3	Substation	21
7.3.1	Transportation	21
7.3.2	Installation.....	21
8	Commissioning	22
9	Operation and maintenance.....	22
9.1	Transmission lines	22
9.2	Substations.....	23
9.2.1	General	23
9.2.2	Operation	23
9.2.3	Maintenance	23
10	Environmental considerations	24
10.1	Transmission lines	24
10.1.1	General	24
10.1.2	EMF	24
10.1.3	Electrostatic induction.....	24
10.1.4	Electromagnetic induction.....	25
10.1.5	Audible noise with corona discharge.....	25
10.1.6	Radio interference with corona discharge	25
10.1.7	Wind noise	25
10.1.8	Environmental impact	25
10.2	Substations.....	25
10.2.1	Earthing design	25
10.2.2	Electrostatic-induction design	25
10.2.3	Audible noise mitigation design	26
10.2.4	Disaster-prevention design	26
	Bibliography.....	27
	Figure 1 – Bus scheme	16
	Figure 2 – General method of commissioning on site	22
	Figure 3 – Basic way of considering operation and maintenance of UHV AC substations	24
	Table 1 – AC three-phase systems having a highest voltage for equipment exceeding 800 kV	10
	Table 2 – Comparison of lightning fault between UHV and 550 kV systems.....	10

Table 3 – Substation switchgears’ comparison (GIS, Hybrid-IS, and AIS).....	17
Table 4 – The principle technology designs for substations (their components and bays)	18

INTERNATIONAL ELECTROTECHNICAL COMMISSION

UHV AC TRANSMISSION SYSTEMS –

Part 100: General information

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

The main task of IEC technical committees is to prepare International Standards. However, a technical committee may propose the publication of a technical report when it has collected a different kind of data from that which is normally published as an International Standard, for example “state of the art”.

The technical report IEC 63042-100 was prepared by IEC Technical Committee 122: UHV AC transmission systems.

The text of this technical report is based on the following documents:

Enquiry draft	Report on voting
122/29/DTR	122/31A/RVC

Full information on the voting for the approval of this technical report can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC 63042 series, published under the general title *UHV AC transmission systems*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be:

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

INTRODUCTION

UHV AC transmission systems are capable of transmitting large amounts of electric power. However, if a failure occurs in a UHV AC system, the system influence can be severe from the viewpoints of reliability and overall security of the supply of the power system. Most UHV AC substations are located far from city areas, with large equipment in size and mass installed. Equipment is transported over long distances from where it is manufactured and tested to where it is installed and commissioned. Also, the installation time of equipment is generally longer compared with lower voltage classes. For UHV AC transmission lines, the design of insulation is an important aspect due to non-linearity effect.

Therefore, securing the reliability, availability, and environmental aspects are crucial issues. Standards and/or applications guidance, as relevant, in the following aspects of UHV AC transmission systems exceeding 800 kV are necessary:

- a) planning (guidance);
- b) design;
- c) technical requirements (exclusively systems-related);
- d) construction;
- e) commissioning;
- f) reliability;
- g) availability (continuity of power supply, % availability);
- h) operation;
- i) maintenance.

This document describes both specific issues to UHV AC transmission systems and common issues of UHV AC and lower voltage transmission systems because it is very easy to understand UHV AC transmission systems as a whole.

In this Technical Report, minimum items or requirements for the standards and guidelines for each step of UHV AC transmission systems are described.

UHV AC TRANSMISSION SYSTEMS –

Part 100: General information

1 Scope

This part of IEC 63042, which is a Technical Report, specifies the reference for the standards and guidelines for UHV AC transmission systems. This document provides an overview of these standards as well as guidelines.

This document is developed to clarify standardization items and/or guideline items for UHV AC transmission systems. It describes the items to be considered for each stage of planning, design, construction, commissioning, operation, and maintenance during the development of IEC publications for UHV AC transmission systems.

NOTE Based on this IEC/TR 63042-100, TC 122 will prepare the standards and guidelines for UHV AC transmission systems, but it is not limited by the framework of the TR. A systematic approach is necessary for the preparation of systems-oriented specifications such as those for planning, design, technical requirements, construction, commissioning, reliability, availability, operation, and maintenance.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
