## CONTENTS

FOREWORD.....	4
INTRODUCTION.....	6
1 Scope.....	8
2 Normative references .....	9
3 Terms and definitions .....	10
4 Terminologies in IAEA-IEC and NRC-IEEE .....	12
5 Abbreviated terms and acronyms.....	14
6 General .....	14
6.1 Hazard analysis of digital instrumentation and control systems .....	14
6.2 Purpose of hazard analysis.....	15
7 Comparison of hazard analysis requirements and guidance for nuclear industry .....	16
7.1 General.....	16
7.2 IAEA Safety Requirements SSR-2/1: Design Safety of NPP .....	17
7.3 IAEA Safety Requirements SSR-2/2: Operation Safety of NPP.....	18
7.4 IAEA SSG-39 recommendations for I&C system Hazard Analysis.....	19
7.5 IEEE 603 requirements for I&C system Hazard Analysis .....	20
7.6 IEEE7-4.3.2-2010 requirements for computer based I&C system Hazard Analysis .....	21
7.7 IEEE 1228-1994 requirements for I&C software Hazard Analysis .....	22
7.8 IEEE 1012-2012 requirements for system Hazard Analysis .....	23
7.9 HA Guidance of US NRC .....	24
8 MDEP common position on hazard identification and controls for digital I&C systems.....	27
8.1 General.....	27
8.2 Hazard identification [59] .....	27
8.3 Hazard control [59] .....	28
9 Further works for hazard analysis of I&C for NPPs .....	28
9.1 The harmonized HA for I&C system of systems(SoS), software, hardware, and human.....	28
9.2 The harmonized HA with the security, and reliability of I&C systems .....	29
10 Conclusion .....	30
Annex A (informative) Survey of practical techniques for Hazard Analysis .....	31
A.1 General.....	31
A.2 Practical techniques for Hazard Analysis .....	31
A.3 Use of the techniques for performing the HA for I&C systems .....	32
Annex B (informative) Comparison of Hazard Analysis guidance and requirements of safety industries .....	33
B.1 [Safety industry general] IEC 61508 requirements for system hazard analysis .....	33
B.2 [Aerospace industry] DO-178C.....	34
B.3 [Air Force System Safety handbook], 2000[63].....	36
B.4 [Military Industry] MIL-STD-882E (System Safety).....	38
B.5 [Car Safety] ISO 26262 (Auto) .....	39
B.6 [Railway Industry] IEC 62278(RAMS).....	42
B.7 [Medical Industry] IEC 60601-1 (Medical electrical equipment – Part 1: General requirements for basic safety and essential performance)[64].....	44
Annex C (informative) Comparison criteria of Hazard Analysis requirements.....	47

C.1	Safety principles (safety model, safety culture) .....	47
C.2	Safety processes .....	47
C.3	Definition of HA.....	47
C.4	Purpose of HA .....	47
C.5	Method of HA.....	47
C.6	HA process .....	47
C.7	Independence of HA (HA organization) .....	47
C.8	Harmonized HA of SoS .....	48
C.9	Relationship with other requirements (security, reliability).....	48
Bibliography.....		50
Figure 1	– I&C Layer and Defence-in-Depth Level .....	9

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

# NUCLEAR POWER PLANTS – INSTRUMENTATION AND CONTROL SYSTEMS IMPORTANT TO SAFETY – HAZARD ANALYSIS: A REVIEW OF CURRENT APPROACHES

## FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as closely as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall be attached to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

The main task of IEC technical committees is to prepare International Standards. However, a technical committee may propose the publication of a Technical Report when it has collected data of a different kind from that which is normally published as an International Standard, for example "state of the art".

IEC TR 63192, which is a technical report, has been prepared by subcommittee 45A: Instrumentation, control and electrical power systems of nuclear facilities, of IEC technical committee 45: Nuclear instrumentation.

The text of this Technical Report is based on the following documents:

Draft TR	Report on voting
45A/1197/DTR	45A/1231/RVDTR

Full information on the voting for the approval of this Technical Report can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

## INTRODUCTION

### **a) Technical background, main issues and organisation of the document**

The purpose of the TR is to identify the worldwide situation of HA requirements for digital I&C.

It is not the purpose of this technical report to reconcile the hazards analysis techniques and to harmonise the use of hazards analysis terminology between the many different approaches used by standards bodies (e.g. between the IEEE and IAEA), but rather to document the different approaches. The information provided can then be used to further the development of a consistent approach to hazards analysis within the IEC.

It is intended that this document be used by operators of NPPs (utilities), systems evaluators and by licensors.

### **b) Situation of the current document in the structure of the IEC SC 45A standard series**

IEC 63192 as a Technical Report is a fourth level IEC/SC 45A document.

For more details on the structure of the IEC SC 45A standard series, see item d) of this introduction.

### **c) Recommendations and limitations regarding the application of the document**

It is important to note that a technical report is entirely informative in nature. It gathers data collected from different origins and it establishes no requirements.

### **d) Description of the structure of the IEC SC 45A standard series and relationships with other IEC documents and other bodies documents (IAEA, ISO)**

The top-level documents of the IEC SC 45A standard series are IEC 61513 and IEC 63046. IEC 61513 provides general requirements for I&C systems and equipment that are used to perform functions important to safety in NPPs. IEC 63046 provides general requirements for electrical power systems of NPPs; it covers power supply systems including the supply systems of the I&C systems. IEC 61513 and IEC 63046 are to be considered in conjunction and at the same level. IEC 61513 and IEC 63046 structure the IEC SC 45A standard series and shape a complete framework establishing general requirements for instrumentation, control and electrical systems for nuclear power plants.

IEC 61513 and IEC 63046 refer directly to other IEC SC 45A standards for general topics related to categorization of functions and classification of systems, qualification, separation, defence against common cause failure, control room design, electromagnetic compatibility, security, software and hardware aspects for programmable digital systems, coordination of safety and security requirements and management of ageing. The standards referenced directly at this second level should be considered together with IEC 61513 and IEC 63046 as a consistent document set.

At a third level, IEC SC 45A standards not directly referenced by IEC 61513 or by IEC 63046 are standards related to specific equipment, technical methods, or specific activities. Usually these documents, which make reference to second-level documents for general topics, can be used on their own. IEC 63096 refers in detail to a distinct version of ISO/IEC 27002. A later modification of ISO/IEC 27002 must not automatically influence the modifications, detailing and completions given by IEC 63096 without analysing the consequences from the nuclear I&C perspective.

A fourth level extending the IEC SC 45 standard series, corresponds to the Technical Reports which are not normative.

The IEC SC 45A standards series consistently implements and details the safety and security principles and basic aspects provided in the relevant IAEA safety standards and in the relevant documents of the IAEA nuclear security series (NSS). In particular this includes the IAEA requirements SSR-2/1, establishing safety requirements related to the design of nuclear power plants (NPPs), the IAEA safety guide SSG-30 dealing with the safety classification of structures, systems and components in NPPs, the IAEA safety guide SSG-39 dealing with the design of instrumentation and control systems for NPPs, the IAEA safety guide SSG-34 dealing with the design of electrical power systems for NPPs and the implementing guide NSS17 for computer security at nuclear facilities. The safety and security terminology and definitions used by SC 45A standards are consistent with those used by the IAEA.

IEC 61513 and IEC 63046 have adopted a presentation format similar to the basic safety publication IEC 61508 with an overall life-cycle framework and a system life-cycle framework. Regarding nuclear safety, IEC 61513 and IEC 63046 provide the interpretation of the general requirements of IEC 61508-1, IEC 61508-2 and IEC 61508-4, for the nuclear application sector. In this framework IEC 60880, IEC 62138 and IEC 62566 correspond to IEC 61508-3 for the nuclear application sector. IEC 61513 and IEC 63046 refer to ISO as well as to IAEA GS-R part 2 and IAEA GS-G-3.1 and IAEA GS-G-3.5 for topics related to quality assurance (QA). At level 2, regarding nuclear security, IEC 62645 is the entry document for the IEC/SC 45A security standards. It builds upon the valid high level principles and main concepts of the generic security standards, in particular ISO/IEC 27001 and ISO/IEC 27002; it adapts them and completes them to fit the nuclear context and coordinates with the IEC 62443 series. At level 2, IEC 60964 is the entry document for the IEC/SC 45A control room standards and IEC 62342 is the entry document for the ageing management standards.

NOTE 1 It is assumed that for the design of I&C systems in NPPs that implement conventional safety functions (e.g. to address worker safety, asset protection, chemical hazards, process energy hazards) international or national standards would be applied.

NOTE 2 IEC/SC 45A domain was extended in 2013 to cover electrical systems. In 2014 and 2015 discussions were held in IEC/SC 45A to decide how and where general requirements for the design of electrical systems were to be considered. IEC/SC 45A experts recommended that an independent standard be developed at the same level as IEC 61513 to establish general requirements for electrical systems. Project IEC 63046 is now launched to cover this objective. When IEC 63046 is published this NOTE 2 of the introduction of IEC/SC 45A standards will be suppressed.

## **NUCLEAR POWER PLANTS – INSTRUMENTATION AND CONTROL SYSTEMS IMPORTANT TO SAFETY – HAZARD ANALYSIS: A REVIEW OF CURRENT APPROACHES**

### **1 Scope**

This document provides the comparison of the hazard analysis requirements between IAEA framework and NRC-IEEE framework of standards and guidance. The hazard analysis requirements in the different standards were compared with a set of comparison criteria, including the safety principle, the safety process, the definitions, the hazard analysis process, etc. This document includes the comparison results of the HA requirements of the safety control systems of other safety industries in Annex C.

For a nuclear power plant, the design safety and operation safety shall be analyzed, for example, to meet the IAEA Safety Requirements for Design (SSR-2/1) and Operation (SSR-2/2). The scope of this document is to survey the state of the art in the hazard analysis for the design of I&C system of NPPs.

Figure 1 illustrates the scope of I&C systems important to safety which have hazard analysis requirements, in the form of a three by three matrix which is in IEEE 603-2009. This document covers the hazard analysis for the sense and command features of digital systems. This document also considers the requirements for hazard analysis of the system of systems (SoS), including the software, hardware and human for the digital systems.

Figure 1 – I&C Layer and Defence-in-Depth Level
