## CONTENTS

FOREWORD.....	5
INTRODUCTION.....	7
1 Scope.....	8
2 Normative reference .....	8
3 Terms, definitions and abbreviated terms .....	8
3.1 Terms and definitions.....	8
3.2 Abbreviated terms.....	11
4 Overview .....	12
4.1 High dynamic range video.....	12
4.2 HDR TV market.....	13
5 HDR TV power measurement challenges.....	14
5.1 Overview.....	14
5.2 Content analysis .....	15
5.2.1 General .....	15
5.2.2 Sources of HDR video content.....	15
5.2.3 HDR metadata.....	16
5.2.4 Increased complexity of display technologies enabling HDR.....	16
5.3 HDR video content aspects beyond the scope of this report.....	16
6 Dominant aspects for HDR TV power consumption measurement.....	17
6.1 Overview.....	17
6.2 Fundamental criteria and requirements for Final HDR Test Clip deliverable .....	18
6.3 HDR media formats.....	19
6.4 Differences between HDR formats .....	19
6.5 Mastering display brightness.....	21
6.6 Resolution, scan type and frame rate .....	22
6.7 Aspect ratio .....	22
6.8 Picture level.....	23
6.9 Content signal level analysis method .....	23
7 Fundamental objectives of HDR test clip deliverable.....	24
7.1 Overview.....	24
7.2 CLASP source material.....	24
7.3 Luminance, APL and colour saturation properties .....	24
7.4 Order of scenes .....	25
7.5 Creating the initial HDR test clip .....	26
7.6 Optimization of initial HDR test clip to match power statistics.....	27
8 Generation of the final HDR test clips.....	28
8.1 HDR signal properties.....	28
8.1.1 Overview .....	28
8.1.2 Colour gamut.....	28
8.1.3 Colour depth.....	28
8.1.4 Chroma subsampling .....	29
8.2 Converting the optimised test clip to the recommended formats.....	29
8.3 Additional elements .....	29
8.3.1 Countdown timer .....	29
8.3.2 Audio tone.....	29
9 Delivery of test media .....	29

10	Rating of SD and HDR power consumption .....	30
11	Summary .....	30
Annex A (informative) Other considerations for a next-generation TV power measurement standard .....		
	A.1 Overview .....	32
	A.2 Visual overlays .....	32
	A.3 Motion-based features .....	32
	A.4 Standby modes and smart television set features .....	32
	A.4.1 Quick start .....	32
	A.4.2 Networked standby features .....	33
	A.4.3 Smart TV applications .....	33
	A.5 Audio .....	33
Annex B (informative) Details on content assessment methods .....		
	B.1 Overview .....	34
	B.2 Methods for analysis done by PCL on December 20, 2018 .....	34
	B.2.1 General .....	34
	B.2.2 Test method .....	34
	B.2.3 File name decoder .....	34
	B.2.4 Workflow for experimental test clips .....	35
	B.3 Methods for analysis done by PCL on March 20, 2019 .....	38
	B.4 Rendering final test clip from DaVinci Resolve Studio 15 .....	38
	B.4.1 HDR10 workflow .....	38
	B.4.2 HLG workflow .....	40
Annex C (informative) Technical description for converting SMPTE ST 2084 to HLG .....		
	C.1 Overview .....	42
	C.2 Step 1: Convert from SMPTE ST 2084 to absolute linear light .....	42
	C.3 Step 2: convert from absolute linear light to HLG .....	42
	C.4 Encoding using command line tools .....	44
	C.4.1 General .....	44
	C.4.2 25 fps HDR10 CLI Encode via FFmpeg .....	44
	C.4.3 25 fps HLG CLI Encode via FFmpeg .....	45
Bibliography .....		
	Figure 1 – Occurrence of linear and non-linear signal encodings in context of a typical display processing pipeline and how they can be used to compute APL and APL' .....	10
	Figure 2 – Overview of how the deliverables were developed .....	17
	Figure 3 – Illustration on editing the initial HDR test clip from the CLASP source material .....	27
	Figure 4 – Optimization of initial HDR test clip to match power statistics .....	27
	Figure 5 – Average power consumption of protected HDR content versus optimized HDR test clip .....	28
	Table 1 – Fundamental HDR test media format summary .....	19
	Table 2 – HDR media formats available in the consumer TV landscape .....	19
	Table 3 – Comparison of HDR media formats on the power consumption (W) of TVs .....	21
	Table 4 – Power consumption (W) of TVs displaying the colour graded Initial HDR test clip ..	21
	Table 5 – Power consumption (W) of TVs displaying the assessment HDR video content in different resolutions .....	22

Table 6 – Power consumption (W) of TVs displaying the assessment HDR video content with different frame rates .....	22
Table 7 – Recommended scene order in the test clip .....	25
Table B.1 – Characteristics of TVs of the NEEA test farm used for the March 20, 2019 analysis .....	34
Table B.2 – File name decoder .....	35
Table B.3 – Workflow .....	35
Table B.4 – Resolve master session: PCL Dolby Vision® 4000 cd/m <sup>2</sup> .....	36
Table B.5 – Resolve master session: PCL HDR10 1000 nit: HDR10 grade .....	36
Table B.6 – Resolve master session: HLG1 .....	37
Table B.7 – Resolve master session: HLG2 .....	37
Table B.8 – Characteristics of TVs of the NEEA test farm used for the March 20, 2019 analysis .....	38

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

### POWER CONSUMPTION OF HIGH DYNAMIC RANGE TELEVISION SETS

#### FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

The main task of IEC technical committees is to prepare International Standards. However, a technical committee may propose the publication of a technical report when it has collected data of a different kind from that which is normally published as an International Standard, for example "state of the art".

IEC TR 63274, which is a Technical Report, has been prepared by Technical Area 19: Environmental and energy aspects for multimedia systems and equipment, of IEC technical committee 100: Audio, video and multimedia systems and equipment.

The text of this Technical Report is based on the following documents:

DTR	Report on voting
100/3348/DTR	100/3397/RVDTR

Full information on the voting for the approval of this Technical Report can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under [webstore.iec.ch](http://webstore.iec.ch) in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

**IMPORTANT – The "colour inside" logo on the cover page of this document indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**

## INTRODUCTION

High dynamic range (HDR) video is emerging as a new technology that affects the entire video ecosystem from production and processing, through to distribution and presentation. HDR television sets potentially have higher peak luminance level capabilities, and HDR video signals can represent pictures with much higher luminance levels than was the case in traditional analogue and digital video systems.

Current television set power consumption measurement methods, including those standardized in the IEC 62087 series (see [1]<sup>1</sup>, [2] and [3]), consider only televisions that accept a traditional, standard dynamic range (SDR) signal. It is likely that an HDR-capable television's power consumption will differ when presented with an HDR signal versus an SDR signal.

IEC TC100 TA19 has identified a standardization opportunity related to the method of measuring the power consumption of HDR television sets, including the development of a related HDR test signal.

This document assesses the current HDR technology for the parameters relevant for TV power consumption and sets the groundwork for the subsequent development of a measurement standard for the power consumption of HDR TV sets.

<sup>1</sup> Numbers in square brackets refer to the Bibliography.

## **POWER CONSUMPTION OF HIGH DYNAMIC RANGE TELEVISION SETS**

### **1 Scope**

This document introduces high dynamic range video technology, describes current television set power consumption measurement methods, discusses the HDR TV market, analyses HDR TV power measurement challenges, and considers a path forward for HDR TV power measurement standards development.

### **2 Normative reference**

There are no normative references in this document.
