CONTENTS

FOREWORD.....	4
1 Scope.....	6
2 Normative References	7
3 Terms and definitions	8
4 Key principles reminder	10
4.1 General.....	10
4.2 Namespace introduction.....	10
4.2.1 General	10
4.2.2 Basic namespaces.....	11
5 Main cases of extensions of IEC 61850	12
5.1 Namespace extensions and associated rules	12
5.1.1 General	12
5.1.2 Domain namespaces	12
5.1.3 Product standard namespaces.....	12
5.1.4 Transitional namespaces	12
5.1.5 Private namespaces	13
5.2 IEC 61850 profiles for domains	13
5.3 Mapping of IEC 61850 data model to other protocols at CDC level.....	13
6 What to extend in relation with IEC 61850?	13
6.1 List of basic requirements	13
6.1.1 General	13
6.1.2 IEC 61850 structure reminder.....	13
6.1.3 Main deliverables and their positioning in IEC 61850 documentation structure	15
6.1.4 Intellectual property requirements.....	16
6.1.5 Editorial Recommendations	17
6.1.6 Data Model extension requirements.....	17
6.1.7 XML namespace extensions	26
6.1.8 Cyber-security requirements.....	27
6.1.9 Conformance Testing requirements	27
6.1.10 Maintenance of standard extension document	27
6.1.11 Backward compatibility treatment.....	31
6.2 List of IEC 61850 flexibilities.....	33
6.2.1 General	33
6.2.2 Data Model flexibilities.....	33
6.2.3 Communication services.....	35
6.2.4 SCL language.....	35
6.3 Allowed flexibilities per extension cases.....	37
7 The main activities for extending IEC 61850	39
7.1 Typical activities applying to all types of extension.....	39
7.1.1 General	39
7.1.2 List the main use cases for extending IEC 61850 -> deliverable P1	40
7.1.3 Ensure knowledge of the existing IEC 61850 content.....	40
7.1.4 Identify possible IEC 61850 gaps.....	40
7.1.5 Build-up IEC 61850 extensions.....	40
7.1.6 Maintain IEC 61850 extensions.....	40

7.2	Define a standard namespace (product, domain or transitional) – if needed – -> deliverable P2a or P2b	40
7.2.1	General	40
7.2.2	Get a model manager nominated	41
7.2.3	Get the proposed model reviewed.....	41
7.2.4	Publish a namespace extension.....	41
7.3	Define "standard" profile(s) – if needed – deliverable P3 (and P4)	42
7.3.1	General	42
7.3.2	Define interoperability objectives	42
7.3.3	Publish profile(s) -> deliverable P3	42
7.3.4	Publish profile(s) testing -> deliverable P4.....	42
Annex A (informative) IEC 61850 roadmap (example)		43
Bibliography.....		45
Figure 1 – IEC 61850 documentation structure		14
Figure 2 – Extensions deliverables positioned in the IEC 61850 document structure.....		15
Figure 3 – Handling versioning information for official IEC publication		28
Figure 4 – Handling versioning information during the internal IEC writing process		29
Figure 5 – Example of tissue fix sequence and its impact on versioning information		30
Figure 6 – Activities related to IEC 61850 extensions.....		39
Figure A.1 – Example of IEC 61850 roadmap.....		44
Table 1 – Typical deliverables attached to IEC 61850 extensions		16
Table 2 – Normative information related to a namespace (for example for IEC61850-7-420:2009A release 5)		19
Table 3 – Informative information related to a namespace (for example for IEC61850-7-420:2009A release 5)		19
Table 4 – Classification of Abbreviations in regards of their contribution to form a DO Name (examples).....		23
Table 5 – Semantic description frame and requirements		25
Table 6 – Typical compatibility assessment.....		31
Table 7 – Typical compatibility assessment and associated compatibility rules – detailed discussion		31
Table 8 – Typical compatibility table		32
Table 9 – Allowed flexibilities per extension cases		37

INTERNATIONAL ELECTROTECHNICAL COMMISSION

COMMUNICATION NETWORKS AND SYSTEMS FOR POWER UTILITY AUTOMATION –

Part 1-2: Guidelines on extending IEC 61850

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

The main task of IEC technical committees is to prepare International Standards. In exceptional circumstances, a technical committee may propose the publication of a Technical Specification when

- the required support cannot be obtained for the publication of an International Standard, despite repeated efforts, or
- the subject is still under technical development or where, for any other reason, there is the future but no immediate possibility of an agreement on an International Standard.

Technical Specifications are subject to review within three years of publication to decide whether they can be transformed into International Standards.

Technical specification IEC TS 61850-1-2 has been prepared by IEC technical committee TC 57: Power systems management and associated information exchange.

The text of this technical specification is based on the following documents:

DTS	Report on voting
57/2084/DTS	57/2145/RVDTS

Full information on the voting for the approval of this technical specification can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC 61850 series, published under the general title *Communication networks and systems*, can be found on the IEC website.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- transformed into an International standard,
- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

COMMUNICATION NETWORKS AND SYSTEMS FOR POWER UTILITY AUTOMATION –

Part 1-2: Guidelines on extending IEC 61850

1 Scope

This part of IEC 61850, which is a technical specification, is intended for any users but primarily for standardization bodies that are considering using IEC 61850 as a base standard within the scope of their work and are willing to extend it as allowed by the IEC 61850 standards. This document identifies the required steps and high-level requirements in achieving such extensions of IEC 61850 and provides guidelines for the individual steps.

Within that scope, this document addresses the following cases:

- The management of product-level standards for products that have an interface based on IEC 61850
- The management of domain-level standards based on IEC 61850
- The management of transitional standards based on IEC 61850
- The management of private namespaces based on IEC 61850
- The development of standards offering the mapping of IEC 61850 data model at CDC level
- The development and management of IEC 61850 profiles for domains (underlying the role of IEC TR 62361-103 and IEC TR 61850-7-6)

This document includes both technical and process aspects:

On the technical side, this document:

- Highlights the main basic requirements (mostly referring to the appropriate parts of the series which host the requirements or recommendations)
- Lists all possible flexibilities offered by the standards
- Defines which flexibilities are allowed/possible per type of extension cases

On the process side, the document covers:

- The initial analysis of how the existing IEC 61850 object models and/or communication services may be applied and what allowed extensions may be required for utilizing them in new or specific domains (including private ones). The results of that step are expected to be documented
- The extension of the IEC 61850 object models for new domains. The typical associated work is to identify existing logical nodes which can be reused "as is", to determine if existing logical nodes can be extended, or to define new logical nodes
- The purpose and process to use transitional namespaces, which are expected to be merged eventually into an existing standard namespace
- The management of standard namespaces
- The development of private namespaces

2 Normative References

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
