Annex B (informative) Description of frequency or ROCOF measurement use cases				
B.1 Use case "PLL in photovoltaic power generating systems"44				
	B.1.1	Technical background of the use case	44	
	B.1.2	Resulting requirements for measurement	45	

IEC TS 62786-41:2023 © IEC 2023

B.2	Use case "Primary reserve"	46			
B.2.1	Technical background of the use case	46			
B.2.2	Resulting requirements for measurement	46			
B.2.3	Example of "frequency-watt" function in photovoltaic power generating systems	47			
B.3	Use case "Secondary reserve – frequency measurement used for centralized control"	48			
B.3.1	Technical background of the use case	48			
B.3.2	Resulting requirements for measurement	48			
B.4	Use case "Fast frequency-active power proportional controller with dead	49			
B.4.1	Technical background of the use case	.49			
B.4.2	Resulting requirements for measurement	50			
B.5	Use case "Fast frequency response"	51			
B.5.1	Technical background of the use case	51			
B.5.2	Resulting requirements for measurement	51			
B.6	Use case "Synthetic inertia"	51			
B.6.1	Technical background of the use case	51			
B.6.2	Resulting requirements for measurement	52			
B.7	Use case "Passive anti-islanding detection"	52			
B.7.1	Technical background of the use case	52			
B.7.2	Resulting requirements for measurement	53			
B.8	Use case "Active anti-islanding detection"	54			
B.8.1	Technical background of the use case	54			
B.8.2	Resulting requirements for measurement	54			
B.9	Use case "ROCOF measurement used for centralized control"	55			
B.9.1	Technical background of the use case	55			
B.9.2	Resulting requirements for measurement	55			
B.10	Use case "Load control with active power management"	55			
B.10.	1 Technical background of the use case	55			
B.10.	2 Resulting requirements for measurement	55			
B.11	Use case "Self-dispatchable loads" (microgrid applications)	56			
B.11.	1 Technical background of the use case	56			
B.11.	2 Resulting requirements for measurement	56			
B.12	Use case "Under-frequency load shedding" (UFLS)	57			
B.12.	1 Technical background of the use case	57			
B.12.	2 Resulting requirements for measurement	57			
Annex C ( codes rela	informative) Summary of requirements expressed in standards and grid Ited to frequency and ROCOF measurements	58			
Annex D ( of incident	informative) Maximum ROCOF to be considered on power systems in case	.65			
D.1	General	65			
D 2		65			
D.3	European continent	65			
D.4	Islands	65			
Annex E (	informative) Frequency and rotating vectors	66			
Annex F (informative) Synthetizing input signals with sudden frequency change					
		00 74			
Annex G (	informative) Step test equivalent time sampling technique	/1			
G.1	Overview	71

#### INTERNATIONAL ELECTROTECHNICAL COMMISSION

#### DISTRIBUTED ENERGY RESOURCES CONNECTION WITH THE GRID -

### Part 41: Requirements for frequency measurement used to control distributed energy resources (DER) and loads

#### FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at https://patents.iec.ch. IEC shall not be held responsible for identifying any or all such patent rights.

IEC TS 62786-41 has been prepared by IEC technical committee 8: System aspects of electrical energy supply. It is a Technical Specification.

The text of this Technical Specification is based on the following documents:

Draft	Report on voting
8/1649/DTS	8/1661/RVDTS

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this Technical Specification is English.

- 8 -

IEC TS 62786-41:2023 © IEC 2023

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members\_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/publications.

It has been developed as part of measurement series together with IEC TS 62786-42 on voltage measurement.

A list of all parts in the IEC 62786 series, published under the general title *Distributed energy resources connection with the grid*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The "colour inside" logo on the cover page of this document indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

### DISTRIBUTED ENERGY RESOURCES CONNECTION WITH THE GRID -

## Part 41: Requirements for frequency measurement used to control distributed energy resources (DER) and loads

#### 1 Scope

This part of IEC 62786, which is a Technical Specification, defines minimum requirements for frequency and rate of change of frequency measurements used to control distributed energy resources (DER) and loads connected to electrical power networks.

This document specifies the characteristics of frequency and rate of change of frequency measurements to evaluate their performances. It describes the main use cases of frequency and rate of change of frequency measurements, with associated level of performances. It describes the principle of functional tests to evaluate the specified characteristics and defines the influencing factors that affect these performances, under steady state or dynamic conditions.

This document defines the functional requirements applicable to frequency and rate of change of frequency measurements which can be inside or outside the DER or loads. In the case of DER, this document provides requirements additional to those which are defined in the other parts of IEC 62786 or standards produced by the relevant IEC technical committees (e.g. TC 82 for photovoltaic systems, TC 88 for wind systems, TC 120 for electrical energy storage systems (EES)).

This document is applicable to DER and loads regardless of the voltage level of the point of connection to the grid.

This document does not specify hardware, software or a method for frequency or rate of change of frequency measurement. It does not specify tests linked to environmental conditions associated with hardware devices (climatic, electromagnetic disturbances above 3 kHz, mechanical stress, etc.).

Frequency and rate of change of frequency measurements associated with time stamping are not in the scope of this document. These measurements are already covered by IEC 60255-118-1 [1]<sup>1</sup>.

Frequency and rate of change of frequency measurements associated with protection functions or protection relays are not in the scope of this document. These requirements are already covered by IEC 60255-181 [2].

NOTE As defined in the first paragraph, this document is focused on frequency and rate of change of frequency measurements used to control DER and loads. But the technical requirements defined in this document, with the list of declared characteristics and their associated functional tests, can also be applicable for other uses where "fast" frequency and ROCOF measurement is required (small or large generators of power substations connected to transmission or distribution grids, power meter devices, power quality instruments, etc.).
