## CONTENTS

FOREWORD.....	4
INTRODUCTION.....	6
1 Scope.....	7
2 Normative references .....	8
3 Terms, definitions and acronyms .....	9
4 Documented information [7.5].....	12
5 Planning [6.0].....	13
5.1 Actions to address risks and opportunities [6.1].....	13
5.1.1 Risk analysis [IATF 6.1.2.1].....	13
5.1.2 Preventive action [IATF 6.1.2.2].....	13
5.2 Quality objectives and planning to achieve them [6.2 / IATF 6.2.2.1].....	13
6 Support [7.0].....	13
6.1 Resources [7.1].....	13
6.1.1 People [7.1.2].....	13
6.1.2 Monitoring and measuring resources [7.1.5] .....	14
6.1.3 Organizational knowledge [7.1.6 ].....	15
6.2 Competence [7.2 / IATF 7.2.1 8.5.1e].....	15
6.3 Awareness [7.3 / IATF 7.3.1].....	15
7 Operation [8.0] .....	15
7.1 General.....	15
7.2 Operational planning and control [8.1].....	15
7.3 Customer communication [8.2.1] .....	16
7.4 Determining the requirements for the product [8.2.2].....	16
7.5 Review of the requirements for products [8.2.3] .....	17
7.5.1 General .....	17
7.5.2 Organization manufacturing feasibility [IATF 8.2.3.1.3] .....	17
7.6 Design and development [8.3].....	17
7.6.1 Design and development planning [8.3.2] .....	17
7.6.2 Design and development inputs [8.3.3] .....	17
7.6.3 Design and development controls [8.3.4] .....	18
7.6.4 Design and development outputs [8.3.5] .....	19
7.6.5 Design and development changes [8.3.6] .....	19
7.6.6 Manufacturing process design inputs [IATF 8.3.3.2].....	20
7.6.7 Manufacturing process design outputs [IATF 8.3.5.2 8.5.1a] .....	20
7.7 Control of externally provided processes, products and services [8.4].....	21
7.7.1 General [8.4.1] .....	21
7.7.2 Type and extent of control [8.4.2] .....	22
7.7.3 Information for external providers [8.4.3] .....	22
7.8 Production and service provision [8.5].....	22
7.8.1 Control of production and service provision [8.5.1] including (f) .....	22
7.8.2 Identification and traceability [8.5.2] .....	25
7.8.3 Property protection [8.5.3] .....	25
7.8.4 Preservation [8.5.4] .....	26
7.8.5 Post-delivery activities [8.5.5].....	26
7.8.6 Control of changes [8.5.6 / IATF 8.5.6.1] .....	26
7.9 Release of products and services [8.6 / IATF 8.6.1] .....	27

7.9.1	General .....	27
7.9.2	Statutory and regulatory conformity [IATF 8.6.5] .....	27
7.9.3	Acceptance criteria [IATF 8.6.6] .....	27
7.10	Control of nonconforming outputs [8.7] .....	27
8	Performance evaluation [9.0] .....	28
8.1	Monitoring, measurement, analysis and evaluation [9.1] .....	28
8.1.1	Monitoring and measurement of a manufacturing process [IATF 9.1.1.1] .....	28
8.1.2	Customer satisfaction [9.1.2] .....	28
8.1.3	Analysis and evaluation [9.1.3] .....	29
8.2	Internal audit [9.2] .....	29
9	Improvement [10.0] .....	29
9.1	Nonconformity and corrective action [10.2] .....	29
9.2	Continual improvement [10.3] .....	30
Annex A (informative) Correspondence between ISO 9001:2015 and IEC TS 63157 .....		31

# PHOTOVOLTAIC SYSTEMS – GUIDELINES FOR EFFECTIVE QUALITY ASSURANCE OF POWER CONVERSION EQUIPMENT

## FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

The main task of IEC technical committees is to prepare International Standards. In exceptional circumstances, a technical committee may propose the publication of a technical specification when

- the required support cannot be obtained for the publication of an International Standard, despite repeated efforts, or
- the subject is still under technical development or where, for any other reason, there is the future but no immediate possibility of an agreement on an International Standard.

Technical specifications are subject to review within three years of publication to decide whether they can be transformed into International Standards.

IEC TS 63157, which is a technical specification, has been prepared by IEC technical committee 82: Solar photovoltaic energy systems.

The text of this technical specification is based on the following documents:

Enquiry draft	Report on voting
82/1595/DTS	82/1625A/RVDTS

Full information on the voting for the approval of this technical specification can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

## INTRODUCTION

The fundamentals of maintaining a quality assurance system are described in ISO 9001. The IEC Technical Committee 82 has supplemented ISO 9001 with additional technical details for guiding creation of quality assurance systems for the manufacture of photovoltaic (PV) modules (IEC TS 62941) and for installation of photovoltaic systems (IEC TS 63049).

Failures of PV systems are often reported to be caused by failures of the power conversion equipment, such as inverters and DC-DC converters. This document was developed to help the industry reduce those failures in a standardized and cost-effective way. It builds on ISO 9001 by adding technical details to be included in a quality assurance system. To facilitate the understanding of how ISO 9001 complements this document, the related ISO 9001 clause/subclause numbers are noted in square brackets as part of each heading as well as being tabulated in Annex A. A few references are also made to the IATF (International Automotive Task Force) 16949 *Quality Management Systems*.

## PHOTOVOLTAIC SYSTEMS – GUIDELINES FOR EFFECTIVE QUALITY ASSURANCE OF POWER CONVERSION EQUIPMENT

### 1 Scope

This document lays out recommendations for best practices for product realization, safety, customer satisfaction, and stakeholders' relationship used in the manufacture of power conversion equipment (PCE).

This document captures key requirements customers would like to see completed to ensure high-quality products, specifically, that the products have the documented properties, including properties needed to give customer satisfaction with regard to the warranty.

The object of this document is to provide more confidence in the ongoing consistency of performance and reliability of certified power conversion equipment. The requirements of this document are defined with the assumption that the quality management system of the organization has already fulfilled the requirements of ISO 9001 or equivalent quality management system. These guidelines also form the basis for factory audit criteria of such sites by various certifying and auditory bodies.

This document covers manufacture of electronic power conversion equipment intended for use in terrestrial PV applications. The term PCE refers to equipment and components for electronic power conversion of electric power into another kind of electric power with respect to voltage, current and frequency. This document applies to PCE in both indoor and outdoor open-air climates as defined in IEC 60721-2-1 and IEC 60721-3-3. Such equipment may include, but is not limited to, DC-to-AC inverters, DC-to-DC converters and battery charge converters.

This document covers PCE that is used with PV arrays. The equipment may also be connected to other DC source or load circuits such as batteries. All parts of the PCE are included (e.g. connectors and software). This document may be used for accessories for use with PCE, except where more appropriate standards exist.

The object of this document is to define steps for providing assurance that:

- The customers' expectations are identified and the product is designed to meet those expectations,
- The performance characteristics and method of meeting the customers' expectations (e.g. efficiency) are identified,
- The specifications are either in conformance with the related standards or mentioned by the manufacturer on the data sheet or other product literature,
- The product has each of the properties described on the data sheet or other product literature, and
- The product has been designed and manufactured to retain those same properties after normal and reasonable environmental stresses experienced in the field (including worst-case typical temperatures, thermal cycling, corrosive conditions, over voltages/currents on DC and AC lines, transportation and installation, etc.) as well as survive stresses coming from the grid within the promise of the warranty.

To achieve these goals, this document requires:

- Analysis to identify potential failure modes and creation of a plan to prevent these during the time of the design lifetime,
- A documented change management control process to address raw material or manufacturing changes arising both internal and external to the organization,

- A documented supplier quality management process with integrated performance standards that uses continuous improvement to enhance overall product quality,
- A documented manufacturing process with workmanship standards that uses continuous improvement to enhance product quality,
- A documented manufacturing process that includes steps that identify when the process has gone out of control and high-level measures to follow to bring the process back in control as specified by an out-of-control action plan (OCAP). This includes measurements that ensure that the products have the defined properties including test results expected for certification, standards and warranty, and
- Testing of software to ensure that it works in the anticipated situations.

## 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
