Information processing — Coding of machine readable characters (MICR and OCR)

Traitement de l'information — Codage des jeux de caractères pour reconnaissance automatisée (MICR et ROC)

Second edition — 1983-05-15

UDC 631.3.048

Ref. No. ISO 2033-1983 (E)

Descriptors : data processing, character sets, coded representation, OCR-A character sets, OCR-B character sets, magnetic recognition.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been authorized has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 2033 was developed by Technical Committee ISO/TC 97, *Information processing systems*, and was circulated to the member bodies in February 1982.

It has been approved by the member bodies of the following countries:

Belgium	Hungary	South Africa, Rep. of
Canada	Italy	Spain
China	Japan	Sweden
Czechoslovakia	Netherlands	Switzerland
Egypt, Arab Rep. of	Norway	United Kingdom
France	Poland	USA
Germany, F.R.	Romania	

No member body expressed disapproval of the document.

This second edition cancels and replaces the first edition (i.e. ISO 2033-1972).

Information processing — Coding of machine readable characters (MICR and OCR)

1 Scope

This International Standard defines the coded representation of printed characters recognized by reading equipment. It includes the fonts:

E 13 B	as covered in ISO 1004
CMC 7	as covered in ISO 1004
OCR-A	as covered in ISO 1073/1
OCR-B	as covered in ISO 1073/2

2 Field of application

This International Standard assigns bit-patterns to characters recognized by reading equipment. This coded information generated by the reading equipment is given to the recipient by different media, such as magnetic tape, by data transmission or a direct link. This coded representation can also be used by printing devices to print the information which shall later be read. It is not intended for general information interchange.

Two different applications are considered:

- Single-font reader:
The reading equipment is only capable of recognizing one font at a time.
- Multiple-font reader:
The reading equipment is capable of recognizing multiple fonts at the same time.
