## Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of the joint technical committee is to prepare International Standards. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

ISO/IEC 10118-2 was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 27, *IT Security techniques*.

This third edition cancels and replaces the second edition (ISO/IEC 10118-2:2000), which has been technically revised. It also incorporates the Technical Corrigendum ISO/IEC 10118-2:2000/Cor.2:2007. The major change is that in the second edition the underlying block cipher used in the hash-functions was assumed to be Data Encryption Algorithm (DEA), whereas in the third edition it is assumed to be more secure block ciphers like Advanced Encryption Standard (AES) and other ciphers included in ISO/IEC 18033-3.

ISO/IEC 10118 consists of the following parts, under the general title *Information technology — Security techniques — Hash-functions*:

- *Part 1: General*
- *Part 2: Hash-functions using an n-bit block cipher*
- *Part 3: Dedicated hash-functions*
- *Part 4: Hash-functions using modular arithmetic*

## Introduction

The International Organization for Standardization (ISO) and International Electrotechnical Commission (IEC) draw attention to the fact that it is claimed that compliance with this document may involve the use of patents.

The ISO and IEC take no position concerning the evidence, validity and scope of these patent rights.

The holders of these patent rights have assured the ISO and IEC that they are willing to negotiate licences under reasonable and non-discriminatory terms and conditions with applicants throughout the world. In this respect, the statements of the holders of these patent rights are registered with the ISO and IEC. Information may be obtained from the ISO/IEC JTC 1 Patent database:

<http://www.iso.org/patents>

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights other than those identified above. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

## Part 2: Hash-functions using an $n$ -bit block cipher

### 1 Scope

This part of ISO/IEC 10118 specifies hash-functions which make use of an  $n$ -bit block cipher algorithm. They are therefore suitable for an environment in which such an algorithm is already implemented.

Four hash-functions are specified. The first provides hash-codes of length less than or equal to  $n$ , where  $n$  is the block-length of the underlying block cipher algorithm used. The second provides hash-codes of length less than or equal to  $2n$ ; the third provides hash-codes of length equal to  $2n$ ; and the fourth provides hash-codes of length  $3n$ . All four of the hash-functions specified in this part of ISO/IEC 10118 conform to the general model specified in ISO/IEC 10118-1.

### 2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
