4.1.1 Guideline: The general framework	7
4.1.2 Guideline: Definitions of syntax and semantics	8
4.1.3 Guidelines on the use of character sets.....	8
4.1.4 Guideline: Error detection requirements.....	14
4.1.5 Guideline: Exception detection requirements	17
4.1.6 Guideline: Static detection of exceptions	19
4.1.7 Guideline: Recovery from non-fatal errors and exceptions	20
4.1.8 Guideline: Requirements on user documentation	20
4.1.9 Guideline: Provision of processor options	20
4.1.10 Guideline: Processor-defined limits	22
4.2 Guidelines on presentation.....	23
4.2.1 Guideline: Terminology	23
4.2.2 Guideline: Presentation of source programs.....	24
4.3 Guidelines on processor dependence.....	24
4.3.1 Guideline: Completeness of definition	24
4.3.2 Guideline: Optional language features	24
4.3.3 Guideline: Management of optional language features	24
4.3.4 Guideline: Syntax and semantics of optional language features	25
4.3.5 Guideline: Predefined keywords and identifiers	25
4.3.6 Guideline: Definition of optional features	25
4.3.7 Guideline: Processor dependence in numerical processing	26
4.4 Guidelines on conformity requirements.....	26
4.5 Guidelines on strategy	26
4.5.1 Guideline: Secondary standards.....	26
4.5.2 Guideline: Incremental standards	26
4.5.3 Guideline: Consistency of use of guidelines	27
4.5.4 Guideline: Revision compatibility	27
4.6 Guidelines on cross-language issues	29
4.6.1 Guideline: Binding to functional standards	29
4.6.2 Guideline: Facilitation of binding	29
4.6.3 Guideline: Conformity with multi-level functional standards.....	30
4.6.4 Guideline: Mixed language programming	30
4.6.5 Guideline: Common elements	30
4.6.6 Guideline: Use of data dictionaries.....	30
4.7 Guidelines on Internationalization	30
4.7.1 Guideline: Cultural convention set switching mechanism.....	30
4.7.2 Guideline: Cultural convention related functionality	31
Annex A (informative) Recommended extended repertoire for user-defined identifiers	32

Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of the joint technical committee is to prepare International Standards. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

In exceptional circumstances, the joint technical committee may propose the publication of a Technical Report of one of the following types:

- type 1, when the required support cannot be obtained for the publication of an International Standard, despite repeated efforts;
- type 2, when the subject is still under technical development or where for any other reason there is the future but not immediate possibility of an agreement on an International Standard;
- type 3, when the joint technical committee has collected data of a different kind from that which is normally published as an International Standard (“state of the art”, for example).

Technical Reports of types 1 and 2 are subject to review within three years of publication, to decide whether they can be transformed into International Standards. Technical Reports of type 3 do not necessarily have to be reviewed until the data they provide are considered to be no longer valid or useful.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

ISO/IEC TR 10176, which is a Technical Report of type 3, was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 22, *Programming languages, their environments and system software interfaces*.

This fourth edition cancels and replaces the third edition (ISO/IEC 10176:2001), which has been technically revised.

Introduction

Background: Over the last three decades (1966-2002), standards have been produced for a number of computer programming languages. Each has dealt with its own language in isolation, although to some extent the drafting committees have become more expert by learning from both the successes and the mistakes of their predecessors.

The first edition of this Technical Report was produced during the 1980s to put together some of the experience that had been gained to that time, in a set of guidelines, designed to ease the task of drafting committees of programming language standards. This second edition enhances the guidelines to take into account subsequent experiences and developments in the areas of internationalization and character sets.

This document is published as a Technical Report type 3 because the design of programming languages - and hence requirements relating to their standardization - is still evolving fairly rapidly, and because existing languages, both standardized and unstandardized, vary so greatly in their properties and styles that publication as a full standard, even as a standard set of guidelines, did not seem appropriate at this time.

The need for guidelines: While each language, taken as a whole, is unique, there are many individual features that are common to many, or even to most of them. While standardization should not inhibit such diversity as is essential, both in the languages and in the form of their standards, unnecessary diversity is better avoided. Unnecessary diversity leads to unnecessary confusion, unnecessary retraining, unnecessary conversion or redevelopment, and unnecessary costs. The aim of the guidelines is therefore to help to achieve standardization across languages and across their standards.

The existence of a guideline will often save a drafting committee from much discussion of detailed points all of which have been discussed previously for other languages.

Furthermore the avoidance of needless diversity between languages makes it easier for programmers to switch between one and another.

NOTE Diversity is a major problem because it uses up time and resources better devoted to the essential part, both by makers and users of standards. Building a language standard is very expensive in resources and far too much time and effort goes into "reinventing the wheel" and trying to solve again, from the beginning, the same problems that other committees have faced.

However, a software writer faced with the task of building (say) a support environment (operating system facilities, utilities, etc.) for a number of different language processors is also faced with many problems from the eventual standards. Quite apart from the essential differences between the languages, there are to begin with the variations of layout, arrangement, terminology, metalanguages, etc. Much worse, there are the variations between requirements of basically the same kind, some substantial, some slight, some subtle - compounded by needless variations in the way they are specified. This represents an immense extra burden - as does the duplication in providing different support tools for different languages performing basically the same task.

How to use this Technical Report: This Technical Report does not seek to legislate on how programming languages should be designed or standardized: it would be futile even to attempt that. The guidelines are, as their name implies, intended for guidance only. Nevertheless, drafting committees are strongly urged to examine them seriously, to consider each one with care, and to adopt its recommendation where practicable. The guidelines have been so written that it will be possible in most cases to determine, by examination, whether a given programming language standard has been produced in accordance with a given guideline, or otherwise. However, the conclusions to be drawn from such an assessment, and consequent action to be taken, are matters for individual users of this Technical Report and are beyond its scope.

Reasons for not adopting any particular guideline should be documented and made available, (e.g. in an informative annex of the programming language standard). This and the reason therefore can be taken into account at future revisions of the programming language standard or this Technical Report.

Of course, care must naturally be taken when following these guidelines to do so in a way which does not conflict with the ISO/IEC Directives, or other rules of the standards body under whose direction the standard is being prepared.

Further related guidelines: This Technical Report is concerned with the generality of programming languages and general issues concerning questions of standardization of programming languages, and is not claimed to be necessarily universally applicable to all languages in all circumstances. Particular languages or kinds of languages, or particular areas of concern, may need more detailed and more specific guidelines than would be appropriate for this Technical Report. At the time of publication, some specific areas are already the subject of more detailed guidelines, to be found in existing or forthcoming Technical Reports. Such Technical Reports may extend, interpret, or adapt the guidelines in this Technical Report to cover specific issues and areas of application. Users of this Technical Report are recommended to take such other guidelines into account, as well as those in this Technical Report, where the circumstances are appropriate. See, in particular, ISO/TR 9547 and ISO/IEC TR 10034.

Information technology — Guidelines for the preparation of programming language standards

1 Scope

This Technical Report presents a set of guidelines for producing a standard for a programming language.
