International Standard ISO/IEC 14515-1:2000(E)  
IEEE Std 2003.1-1992 (Reaff 2000)

# Information technology— Portable Operating System Interface (POSIX<sup>®</sup>)—Test methods for measuring conformance to POSIX—Part 1: System interfaces

Sponsor

**Portable Applications Standards Committee  
of the  
IEEE Computer Society**

Reaffirmed March 2000

**IEEE-SA Standards Board**

Approved November 2000

**International Organization for Standardization  
and by the  
International Electrotechnical Commission**

Adopted as an International Standard by the  
International Organization for Standardization  
and by the  
International Electrotechnical Commission

**Abstract:** ISO/IEC 14515-1:2000(E) (IEEE Std 2003.1-1992) provides a definition of the requirements placed upon providers of POSIX test methods for POSIX.1 (ISO/IEC 9945-1:1990; IEEE Std 1003.1-1990). These requirements consist of a POSIX.1-ordered list of assertions defining those aspects of POSIX.1 that are to be tested and the associated test methods that are to be used in performing those tests. This standard is aimed primarily at POSIX.1 test suite providers and POSIX.1 implementors. This standard specifies those aspects of POSIX.1 that shall be verified by conformance test methods.

**Keywords:** assertion, assertion test, base assertion, conditional feature, extended assertion, POSIX. POSIX Conformance Document, POSIX Conformance Test Procedure, POSIX Conformance Test Suite, test method, test result code

## International Standard ISO/IEC 14515-1:2000(E)

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this part of ISO/IEC 14515 may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

International Standard ISO/IEC 14515-1 was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 22, *Programming languages, their environments and system software interfaces*.

ISO/IEC 14515 consists of the following parts, under the general title *Information technology — Portable Operating System Interface (POSIX) — Test methods for measuring conformance to POSIX*:

- *Part 1: System interfaces*
- *Part 2: Shell and utilities*

Annexes A and B form a normative part of this part of ISO/IEC 14515.

**IEEE Standards** documents are developed within the IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association (IEEE-SA) Standards Board. Members of the committees serve voluntarily and without compensation. They are not necessarily members of the Institute. The standards developed within IEEE represent a consensus of the broad expertise on the subject within the Institute as well as those activities outside of IEEE that have expressed an interest in participating in the development of the standard.

Use of an IEEE Standard is wholly voluntary. The existence of an IEEE Standard does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to the scope of the IEEE Standard. Furthermore, the viewpoint expressed at the time a standard is approved and issued is subject to change brought about through developments in the state of the art and comments received from users of the standard. Every IEEE Standard is subjected to review at least every five years for revision or reaffirmation. When a document is more than five years old and has not been reaffirmed, it is reasonable to conclude that its contents, although still of some value, do not wholly reflect the present state of the art. Users are cautioned to check to determine that they have the latest edition of any IEEE Standard.

Comments for revision of IEEE Standards are welcome from any interested party, regardless of membership affiliation with IEEE. Suggestions for changes in documents should be in the form of a proposed change of text, together with appropriate supporting comments.

Interpretations: Occasionally questions may arise regarding the meaning of portions of standards as they relate to specific applications. When the need for interpretations is brought to the attention of IEEE, the Institute will initiate action to prepare appropriate responses. Since IEEE Standards represent a consensus of all concerned interests, it is important to ensure that any interpretation has also received the concurrence of a balance of interests. For this reason, IEEE and the members of its societies and Standards Coordinating Committees are not able to provide an instant response to interpretation requests except in those cases where the matter has previously received formal consideration.

Comments on standards and requests for interpretations should be addressed to:

Secretary, IEEE-SA Standards Board  
445 Hoes Lane  
P.O. Box 1331  
Piscataway, NJ 08855-1331  
USA

Note: Attention is called to the possibility that implementation of this standard may require use of subject matter covered by patent rights. By publication of this standard, no position is taken with respect to the existence or validity of any patent rights in connection therewith. The IEEE shall not be responsible for identifying patents for which a license may be required by an IEEE standard or for conducting inquiries into the legal validity or scope of those patents that are brought to its attention.

IEEE is the sole entity that may authorize the use of certification marks, trademarks, or other designations to indicate compliance with the materials set forth herein.

Authorization to photocopy portions of any individual standard for internal or personal use is granted by the Institute of Electrical and Electronics Engineers, Inc., provided that the appropriate fee is paid to Copyright Clearance Center. To arrange for payment of licensing fee, please contact Copyright Clearance Center, Customer Service, 222 Rosewood Drive, Danvers, MA 01923 USA; (978) 750-8400. Permission to photocopy portions of any individual standard for educational classroom use can also be obtained through the Copyright Clearance Center.

## Introduction

(This introduction is not a normative part of IEEE Std 2003.1-1992, IEEE Standard for Information Technology—Test Methods for Measuring Conformance to POSIX—Part 1: System Interfaces, but is included for information only.)

This standard provides a definition of the requirements placed upon providers of a POSIX test method for the POSIX.1 {3} that are to be tested and the associated test methods that are to be used in performing those tests. This document is aimed primarily at POSIX.1 {3} test suite providers and POSIX.1 {3} implementors. This document specifies those aspects of the standard that shall be verified by conformance test methods.

## Organization of This Standard

This document is organized into three portions:

- 1) Statement of scope, normative references, conformance requirements, and test methods (Section 1.)
- 2) Conventions and definitions (Section 2.)
- 3) Assertions to test POSIX.1 {3} interface facilities (Section 2. through 10.)

This introduction, any footnotes, notes accompanying the text, and the *informative* annexes are not considered part of this standard. Annexes A and B are informative.

## Related Standards Activities

Activities to extend this standard to address additional requirements are in progress, and similar efforts can be anticipated in the future.

The following areas are under active consideration at this time, or are expected to become active in the near future:<sup>1</sup>

- 1) Language-independent service descriptions of POSIX.1 {3}
- 2) C, Ada, and Fortran language bindings to (1)
- 3) Verification testing methods
- 4) Realtime facilities
- 5) Secure/Trusted System considerations
- 6) Network interface facilities
- 7) System Administration
- 8) Graphical User Interfaces
- 9) Profiles describing application- or user-specific combinations of Open Systems standards for: supercomputing, multiprocessor, and batch extension; transaction processing; realtime systems; and multiuser systems based on historical models
- 10) An overall guide to POSIX-based or related Open Systems standards and profiles

Extensions are approved as “amendments” or “revisions” to this document, following IEEE and ISO/IEC procedures.

Approved amendments are published separately until the full document is reprinted and such amendments are incorporated in their proper positions.

If you have an interest in participating in the TCOS working groups addressing these issues, please send your name, address, and phone number to the Secretary, IEEE Standards Board, Institute of Electrical and Electronics Engineers, Inc., P.O. Box 1331, 445 Hoes Lane, Piscataway, NJ 08855-1331, and ask to have this forwarded to the chairperson of the appropriate TCOS working group. If you have interest in participating in this work at the international level, contact your ISO/IEC national body.

---

<sup>1</sup>A *Standards Status Report* that lists all current IEEE Computer Society standards projects is available from the IEEE Computer Society, 1730 Massachusetts Avenue NW, Washington, DC 20036-1903; Telephone: +1 202 371-0101; FAX: +1 202 728-9614.

IEEE Std 2003.1-1992 was prepared by the P2003.1 working group, sponsored by the Technical Committee on Operating Systems and Application Environments of the IEEE Computer Society. At the time this standard was approved, the membership of the P2003.1 working group was follows:

**Technical Committee on Operating Systems and  
Application Environments (TCOS)**

Chair: Jehan-François Pâris

**TCOS Standards Subcommittee**

Chair: Jim Isaak  
Vice-Chairs: Ralph Barker  
Hal Jespersen  
Lorraine C. Kevra  
Pete Meier  
Andrew T. Twigger

Treasurer: Quin Hahn

Secretary: Shane P. McCarron

**P2003.1 Working Group Officials**

Chair: Roger J. Martin  
Vice-Chairs: Nicholas Ray Wilkes (1989–1990)  
Carol Raye (1987–1988)

Editor: Anthony V. Cincotta

Secretaries: Lowell G. Johnson (1989–1990)  
Doris Lebovits (1987–1988)

**P2003.1 Technical Reviewers**

Sanjay Agraharam  
Anthony V. Cincotta  
Steve Henderson  
Mark Lamonds

James M. Moe  
Anita Mundkur  
Gerald Powell  
Ravi Tavakley

Andrew T. Twigger  
Bruce Weiner

**P2003.1 Working Group**

Sanjay Agraharam  
James P. Bound  
Kenneth R. Gibb  
Judy Guist  
Rich Hamm  
Steve Henderson  
Scott Jameson  
Greg Jones

Lorraine C. Kevra  
Martin J. Kirk  
Mark Lamonds  
Robert M. Lenk  
Kevin Lewis  
Martin J. McGowan III  
James M. Moe  
Anita Mundkur

Fred Noz  
Bob Palm  
Gerald Powell  
Ravi Tavakley  
Donn S. Terry  
Andrew T. Twigger  
Bruce Weiner  
Brian Weis

The following persons provided valuable input during the balloting period:

Chuck Karish

Paul Rabin

The following persons were members of the P2003.1 balloting that approved this standard for submission to the IEEE Standards Board:

Mike Lambert	<i>X/Open Organizational Representative</i>
Shane P. McCarron	<i>Unix International Organizational Representative</i>
Fritz Schulz	<i>OSF Organizational Representative</i>

David Athersych	Judy Guist	Anita Mundkur

# IEEE Standard for Information Technology—Test Methods for Measuring Conformance to POSIX— Part 1: System Interfaces

## 1. General

### 1.1 Scope

This standard defines the general requirements and test methods for measuring conformance to ISO/IEC 9945-1 :1990 (IEEE Std 1003.1-1990) hereinafter referred to as “POSIX.1” {3}.<sup>1</sup> It also defines the test assertions for measuring conformance to POSIX.1 {3}.

This standard is intended for use by

- Developers of POSIX.1 {3} test methods;
- Implementors of POSIX.1 {3} implementations;
- Application writers for POSIX.1 {3} conforming implementations;
- POSIX.1 {3} testing laboratories; and
- Others interested in validating the conformance of a vendor-claimed POSIX.1 {3} implementation

The purpose of this standard is to specify the test assertions and related test methods for measuring conformance of an implementation to POSIX.1 {3}.

Testing conformance of an implementation to a standard includes testing the claimed capabilities and behavior of the implementation with respect to the conformance requirements of the standard. These test methods are intended to provide a reasonable, practical assurance that the implementation conforms to the standard. Use of these test methods will not guarantee conformance of an implementation to POSIX.1 {3}; that normally would require exhaustive testing, which is impractical for both technical and economic reasons.

The technical specifications for a POSIX System Application Program Interface are defined in POSIX.1 {3}. IEEE Std 2003.1-1992 defines a means of measuring conformance to the POSIX.1 {3} technical specifications. Any question of

---

<sup>1</sup>The numbers in curly braces correspond to those of the references in 1.2.

interpretation of those technical specifications arising from the use of this standard is a question of interpretation of POSIX.1 {3}.

## 1.2 Normative References

The following standards contain provisions that, through references in this text, constitute provisions of this standard. At the time of publication, the editions indicated were valid. All standards are subject to revision, and parties to agreements based on this standard are encouraged to investigate the possibility of applying the most recent editions of the standards listed below.

{1}ISO/IEC 646: 1991<sup>2</sup> *Information technology—ISO 7-bit coded character set for information interchange.*

{2}ISO/IEC 9899: 1990 *Information technology—Programming languages—C.*

{3}ISO/IEC 9945-1:1990 (IEEE Std 1003.1-1990)<sup>3</sup> *Standard for Information Technology—Portable Operating System Interface (POSIX)—Part 1: System Application Program Interface (API) [C Language].*

{4}IEEE Std 1003.3-1991 *IEEE Standard for Information Technology—Test Methods for Measuring Conformance to POSIX.*
