CONTENTS

FOREWORD.....	5
INTRODUCTION.....	6
1 Scope.....	7
2 Normative references	7
3 Terms, definitions and abbreviations	7
3.1 Terms and definitions	7
3.2 Abbreviations	9
3.3 Conventions	9
4 Conformance.....	9
5 Architecture.....	9
5.1 Overview	9
5.2 Four types of device interaction models in the IGRS AV application	10
5.2.1 Interaction model between a single media server and a single media client	10
5.2.2 Interaction model between multiple media servers and a single media client	10
5.2.3 Interaction model between a single media server and multiple media clients.....	11
5.2.4 Interaction model between multiple media servers and multiple media clients.....	11
6 Components of the IGRS AV system	12
6.1 IGRS AV applications.....	12
6.2 Media server	12
6.2.1 General	12
6.2.2 Content index service.....	13
6.2.3 BCM TCP service	13
6.2.4 IGRS SOAP service.....	13
6.3 Media client.....	14
6.3.1 General	14
6.3.2 BCM TCP service	15
6.3.3 IGRS SOAP service.....	15
6.3.4 Rendering management service.....	16
6.4 Media device group	16
6.4.1 Overview	16
6.4.2 Content index service device group	16
6.4.3 Audio video multicast device group.....	17
6.5 Modular expansion of media server and media client.....	17
7 Interaction flow of the IGRS AV system	18
7.1 Overview of interaction flow.....	18
7.2 Interaction flow of device grouping	18
7.2.1 Overview of interaction flow of device grouping	18
7.2.2 Inner-group information exchange mechanism of IGRS device group.....	19
7.2.3 Group management mechanism of IGRS centralised device group	22
7.2.4 Content index service device group	24
7.2.5 Audio video multicast device group.....	28
7.3 Interaction flow of dynamic service invocation flow determination.....	32

7.4	Interaction flow of AV playback.....	33
7.4.1	General	33
7.4.2	Media server initiated transport mode	36
7.4.3	Media client initiated transport mode	37
7.5	Interaction flow of multicast AV playback.....	39
7.6	Interaction flow of content management	41
7.6.1	General	41
7.6.2	Interaction flow of collaborative content analysis	41
7.6.3	Interaction flow of a personalised content recommendation	43
8	Session	44
8.1	Session setup.....	44
8.2	Session setup condition.....	45
8.3	Session setup process	45
8.4	Session termination.....	45
8.5	Service invocation message format	45
8.5.1	General	45
8.5.2	Service invocation request message.....	45
8.5.3	Service invocation response message	47
8.5.4	Content directory object update notification message	48
8.5.5	Service attribute update notification message	51
	Bibliography.....	53
	Figure 1 – Device grouping model of the IGRS AV profile	10
	Figure 2 – Interaction model of a single media server and single media client.....	10

INFORMATION TECHNOLOGY – HOME ELECTRONIC SYSTEM (HES) ARCHITECTURE –

Part 5-21: Intelligent grouping and resource sharing for HES Class 2 and Class 3 – Application profile – AV profile

FOREWORD

- 1) ISO (International Organization for Standardization) and IEC (International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards. Their preparation is entrusted to technical committees; any ISO and IEC member body interested in the subject dealt with may participate in this preparatory work. International governmental and non-governmental organizations liaising with ISO and IEC also participate in this preparation.
- 2) In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.
- 3) The formal decisions or agreements of IEC and ISO on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC and ISO member bodies.
- 4) IEC, ISO and ISO/IEC publications have the form of recommendations for international use and are accepted by IEC and ISO member bodies in that sense. While all reasonable efforts are made to ensure that the technical content of IEC, ISO and ISO/IEC publications is accurate, IEC or ISO cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 5) In order to promote international uniformity, IEC and ISO member bodies undertake to apply IEC, ISO and ISO/IEC publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any ISO/IEC publication and the corresponding national or regional publication should be clearly indicated in the latter.
- 6) ISO and IEC provide no marking procedure to indicate their approval and cannot be rendered responsible for any equipment declared to be in conformity with an ISO/IEC publication.
- 7) All users should ensure that they have the latest edition of this publication.
- 8) No liability shall attach to IEC or ISO or its directors, employees, servants or agents including individual experts and members of their technical committees and IEC or ISO member bodies for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication of, use of, or reliance upon, this ISO/IEC publication or any other IEC, ISO or ISO/IEC publications.
- 9) Attention is drawn to the normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 10) Attention is drawn to the possibility that some of the elements of this International Standard may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

International Standard ISO/IEC 14543-5-21 was prepared by subcommittee 25: Interconnection of information technology equipment, of ISO/IEC joint technical committee 1: Information technology.

The list of all currently available parts of the ISO/IEC 14543 series, under the general title *Information technology – Home electronic system (HES) architecture*, can be found on the IEC web site.

This International Standard has been approved by vote of the member bodies, and the voting results may be obtained from the address given on the second title page.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

INTRODUCTION

ISO/IEC 14543-5, Information technology – Home electronic system (HES) architecture – Part 5: Intelligent Grouping and Resource Sharing for HES (IGRS), consists of six parts:

➤ **IGRS Part 5-1: Core protocol**

- Specifies the TCP/IP protocol stack as the basis and the HTTP protocol as the message-exchanging framework among devices.
- Specifies a series of device and service interaction/invocation standards, including device and service discovery protocol, device and service description, service invocation, security mechanisms, etc.
- Specifies core protocols for a type of home network that supports streaming media and other high-speed data transport within a home.

➤ **IGRS Parts 5-2#: Application profile**

- Based on the IGRS Core Protocol.
- Specifies a device and service interaction mechanism, as well as application interfaces used in IGRS basic applications.
- Multiple application profiles are specified, including:
 - Part 5-21: AV profile
 - Part 5-22: File profile
- Additional application profiles are planned (part numbers to be assigned)
 - Part 5-2w: DVD profile
 - Part 5-2x: QoS profile
 - Part 5-2y: DMCP profile
 - Part 5-2z: Universal control profile

➤ **IGRS Part 5-3: Basic application**

- Includes an IGRS basic application list.
- Specifies a basic application framework.
- Specifies operation details (device grouping, service description template, etc.), function definitions and service invocation interfaces.

➤ **IGRS Part 5-4: Device validation**

- Specifies a standard method to validate an IGRS-compliant device.

➤ **IGRS Part 5-5: Device type**

- Specifies IGRS Device types used in IGRS applications.

➤ **IGRS Part 5-6: Service type**

- Specifies basic service types used in IGRS applications.

INFORMATION TECHNOLOGY – HOME ELECTRONIC SYSTEM (HES) ARCHITECTURE –

Part 5-21: Intelligent grouping and resource sharing for HES Class 2 and Class 3 – Application profile – AV profile

1 Scope

This part of ISO/IEC 14543 specifies the media data stream service profile, the device interaction flow, the request and response message format used in device interaction and the description format of services provided by the device.

This part of ISO/IEC 14543 is applicable to computers, household appliances and communication devices that implement media data streaming by wired or wireless means.
