FOREWORD.....	4
INTRODUCTION	6
1 Scope.....	7
2 Normative reference	7
3 Terms, definitions and abbreviations.....	7
3.1 Terms and definitions	7
3.2 Abbreviations.....	9
4 Conformance: IGRS device validation.....	9
4.1 Purpose	9
4.2 Conformance requirements	9
4.3 Test setup and method	9
4.4 Device validation requirements.....	10
5 IGRS test suite overview	10
5.1 Test suite structure	10
5.2 Test suite description	11
5.2.1 IGRS device grouping test suite.....	11
5.2.2 IGRS resource sharing test suite	11
5.2.3 Test suite description rules	11
6 IGRS conformance test suite	12
6.1 Device advertisement conformance test suite.....	12
6.1.1 Reference messages.....	12
6.1.2 Test case suite	12
6.2 Device pipe conformance test suite.....	15
6.2.1 Reference messages.....	15
6.2.2 Unsecure device pipe conformance test suite.....	16
6.2.3 Secure device pipe setup based on symmetric-key authentication and message authentication mechanism conformance test suite	19
6.2.4 Secure device pipe setup based on symmetric-key authentication, encrypted message transmission and authentication mechanism conformance test suite.....	25
6.2.5 Secure device pipe setup based on authentication, encrypted message transmission and authentication mechanism of public-key cryptosystem conformance test suite.....	32
6.2.6 Secure device pipe setup based on trusted third party authentication, encrypted message transmission and authentication mechanism conformance test suite.....	39
6.2.7 Secure device pipe setup confirmation conformance test suite.....	45
6.2.8 Secure device pipe teardown conformance test suite	47
6.2.9 Device online detection conformance test suite	47
6.3 Device description document retrieval conformance test suite.....	50
6.3.1 Reference messages.....	50
6.3.2 Test case suite	50
6.4 Device group setup conformance test suite.....	53
6.4.1 Reference messages.....	53
6.4.2 Test case suite	54
6.5 Device search conformance test suite	60
6.5.1 Reference messages.....	60

INTERNATIONAL ELECTROTECHNICAL COMMISSION

INFORMATION TECHNOLOGY – HOME ELECTRONIC SYSTEM (HES) ARCHITECTURE –

Part 5-4: Intelligent grouping and resource sharing for HES Class 2 and Class 3 – Device validation

FOREWORD

- 1) ISO (International Organization for Standardization) and IEC (International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards. Their preparation is entrusted to technical committees; any ISO and IEC member body interested in the subject dealt with may participate in this preparatory work. International governmental and non-governmental organizations liaising with ISO and IEC also participate in this preparation.
- 2) In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.
- 3) The formal decisions or agreements of IEC and ISO on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC and ISO member bodies.
- 4) IEC, ISO and ISO/IEC publications have the form of recommendations for international use and are accepted by IEC and ISO member bodies in that sense. While all reasonable efforts are made to ensure that the technical content of IEC, ISO and ISO/IEC publications is accurate, IEC or ISO cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 5) In order to promote international uniformity, IEC and ISO member bodies undertake to apply IEC, ISO and ISO/IEC publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any ISO/IEC publication and the corresponding national or regional publication should be clearly indicated in the latter.
- 6) ISO and IEC provide no marking procedure to indicate their approval and cannot be rendered responsible for any equipment declared to be in conformity with an ISO/IEC publication.
- 7) All users should ensure that they have the latest edition of this publication.
- 8) No liability shall attach to IEC or ISO or its directors, employees, servants or agents including individual experts and members of their technical committees and IEC or ISO member bodies for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication of, use of, or reliance upon, this ISO/IEC publication or any other IEC, ISO or ISO/IEC publications.
- 9) Attention is drawn to the normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 10) Attention is drawn to the possibility that some of the elements of this International Standard may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

International Standard ISO/IEC 14543-5-4 was prepared by subcommittee 25: Interconnection of information technology equipment, of ISO/IEC joint technical committee 1: Information technology.

This International Standard has to be read in conjunction with ISO/IEC 14543-5-1.

The list of all currently available parts of the ISO/IEC 14543 series, under the general title *Information technology – Home electronic system (HES) architecture*, can be found on the IEC web site.

This International Standard has been approved by vote of the member bodies, and the voting results may be obtained from the address given on the second title page.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

INTRODUCTION

ISO/IEC 14543-5, *Information technology – Home electronic system (HES) architecture – Part 5: Intelligent grouping and resource sharing (IGRS)* consists of the following parts:

➤ **Part 5-1: Core protocol**

- Specifies the TCP/IP protocol stack as the basis and the HTTP protocol as the message-exchanging framework among devices.
- Specifies a series of device and service interaction/invocation standards, including device and service discovery protocol, device and service description, service invocation, security mechanisms, etc.
- Specifies core protocols for a type of home network that supports streaming media and other high-speed data transport within a home.

➤ **Part 5-2#: Application profiles**

- Based on the IGRS Core Protocol.
- Defines a device and service interaction mechanism, as well as application interfaces used in IGRS Basic Applications.
- Multiple application profiles have been developed, including:
 - **Part 5-21: AV profile** (under consideration)
 - **Part 5-22: File profile** (under consideration)
- Additional application profiles are planned (part numbers to be assigned)
 - **Part 5-2w: DVD profile**
 - **Part 5-2x: QoS profile**
 - **Part 5-2y: DMCP profile**
 - **Part 5-2z: Universal control profile**

➤ **Part 5-3: Basic application** (under consideration)

- Includes an IGRS basic application list.
- Defines a basic application framework.
- Specifies addresses, operation details (device grouping, service description template, etc.), function definitions, and service invocation interfaces.

➤ **Part 5-4: Device validation**

- Defines a standard method to confirm that a device is IGRS-compliant.

➤ **Part 5-5: Device types** (under consideration)

- Defines IGRS Device types used in IGRS applications.

➤ **Part 5-6: Service types** (under consideration)

- Defines basic service types used in IGRS applications.

INFORMATION TECHNOLOGY – HOME ELECTRONIC SYSTEM (HES) ARCHITECTURE –

Part 5-4: Intelligent grouping and resource sharing for HES Class 2 and Class 3 – Device validation

1 Scope

This part of ISO/IEC 14543 specifies device validation methods for information devices that implement ISO/IEC 14543-5-1. It defines an architecture framework for a device validation system used by test devices and devices under test. Also, it describes and specifies the device interaction process, message exchange requirements and conformance rules.

This part of ISO/IEC 14543 is applicable to resource sharing and service collaboration among computers, consumer electronics, and communication devices in a Local Area Network (LAN) or Personal Area Network (PAN) environment, especially in a wireless dynamic network.

2 Normative reference

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document, including any amendments, applies.
