## **INFORMATION TECHNOLOGY – HOME ELECTRONIC SYSTEM (HES) ARCHITECTURE –**

### **Part 5-7: Intelligent grouping and resource sharing for HES Class 2 and Class 3 – Remote access system architecture**

#### **FOREWORD**

- 1) ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.
- 2) The formal decisions or agreements of IEC and ISO on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees and ISO member bodies.
- 3) IEC, ISO and ISO/IEC publications have the form of recommendations for international use and are accepted by IEC National Committees and ISO member bodies in that sense. While all reasonable efforts are made to ensure that the technical content of IEC, ISO and ISO/IEC publications is accurate, IEC or ISO cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees and ISO member bodies undertake to apply IEC, ISO and ISO/IEC publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any ISO, IEC or ISO/IEC publication and the corresponding national or regional publication should be clearly indicated in the latter.
- 5) ISO and IEC do not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. ISO or IEC are not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or ISO or its directors, employees, servants or agents including individual experts and members of their technical committees and IEC National Committees or ISO member bodies for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication of, use of, or reliance upon, this ISO/IEC publication or any other IEC, ISO or ISO/IEC publications.
- 8) Attention is drawn to the normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this ISO/IEC publication may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

International Standard ISO/IEC 14543-5-7 was prepared by subcommittee 25: Interconnection of information technology equipment, of ISO/IEC joint technical committee 1: Information technology.

The list of all currently available parts of the ISO/IEC 14543 series, under the general title *Information technology – Home electronic system (HES) architecture*, can be found on the IEC website and ISO website.

This International Standard has been approved by vote of the member bodies, and the voting results may be obtained from the address given on the second title page.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

## INTRODUCTION

The ISO/IEC 14543-5 series of standards specifies the services and protocol of the application layer for Intelligent Grouping and Resource Sharing (IGRS) devices and services in the Home Electronic System.

The ISO/IEC 14543-5 series includes the following parts.

➤ **IGRS Part 5-1: Core protocol**

- Specifies the TCP/IP protocol stack as the basis and the HTTP protocol as the message-exchange framework among devices.
- Specifies a series of device and service interaction/invocation standards, including device and service discovery protocol, device and service description, service invocation, security mechanisms, etc.
- Specifies core protocols for a type of home network that supports streaming media and other high-speed data transports within a home.

➤ **IGRS Parts 5-21 and 5-22: Application profiles**

- Based on the IGRS core protocol.
- Specify device and service interaction mechanisms, as well as application interfaces used in IGRS basic applications.
- Multiple application profiles are specified, including:
  - Part 5-21: AV profile
  - Part 5-22: File profile

➤ **IGRS Part 5-3: Basic application**

- Includes an IGRS basic application list.
- Specifies a basic application framework.
- Specifies operation details (device grouping, service description template, etc.), function definitions and service invocation interfaces.

➤ **IGRS Part 5-4: Device validation**

- Defines a standard method to validate an IGRS-compliant device.

➤ **IGRS Part 5-5: Device type**

- Specifies IGRS device types used in IGRS applications.

➤ **IGRS Part 5-6: Service type**

- Specifies basic service types used in IGRS applications.

➤ **IGRS Part 5-7: Remote access system architecture**

- Specifies the architecture and framework for the remote access of IGRS devices and services in the Home Electronic System. The remote access communications protocol and application profiles are specified in following parts of this series:
  - ISO/IEC 14543-5-8: Remote access core protocol
  - ISO/IEC 14543-5-9: Remote access service platform
  - ISO/IEC 14543-5-101: Remote AV access profile
  - ISO/IEC 14543-5-102: Remote universal management profile

- ISO/IEC 14543-5-11: Remote user interface
- ISO/IEC 14543-5-12: Remote access test and verification
- The relationships between these parts are specified in this part.
- **IGRS Part 5-8: Remote access core protocol** (under consideration)
  - Provides detailed system constructions, system function modules, basic conceptions of IGRS remote access elements and their relationships, message exchange mechanisms and security related specifications.
  - Specifies interfaces between IGRS remote access (RA) client and service platforms. Defines co-operative procedures among IGRS RA clients.
- **IGRS Part 5-9: Remote access service platform** (under consideration)
  - Specifies the IGRS RA service platform architectures and interfaces among servers in service platforms.
  - Based on the IGRS Part 5-8: Remote access core protocol.
- **IGRS Part 5-101 and 5-102: Remote access application profiles** (under consideration)
  - Define a device and service interaction mechanism for various applications
  - Based on the IGRS Part 5-8: Remote access core protocol
  - Two profiles are under development:
    - Part 5-101: Remote AV access profile. This part defines the common requirements for IGRS RA AV users/devices in IGRS networks.
    - Part 5-102: Remote universal management profile. This part specifies a mechanism for integrating devices with both relatively high and low processing capabilities into IGRS networks. It also specifies universal remote device discovery and management frameworks.
  - Additional application profiles will be specified in the future.
- **IGRS Part 5-11: Remote user interface** (under consideration)
  - Specifies adaptive user interface generation and remote device control mechanisms suitable for different remote access applications and devices.
- **IGRS Part 5-12: Remote access test and verification** (under consideration)
  - Defines a standard method to test and verify IGRS-RA compliant devices and service interfaces.

## **INFORMATION TECHNOLOGY – HOME ELECTRONIC SYSTEM (HES) ARCHITECTURE –**

### **Part 5-7: Intelligent grouping and resource sharing for HES Class 2 and Class 3 – Remote access system architecture**

#### **1 Scope**

This part of ISO/IEC 14543 specifies the architecture and framework for the remote access of IGRS devices and services in the home electronic system. The remote access communications protocol and application profiles are specified in other parts of this series. The relationship among these parts are specified in this standard.

This standard is applicable to the remote access of an IGRS sub-network (called an IGRS subnet) for resource sharing and service collaboration among home and/or remote computers, consumer electronics and communication devices.

#### **2 Normative references**

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
