| 10.3.2 | Treatment of results..... | 36 |
| 10.4 | Return loss of connecting hardware | 37 |
| 10.4.1 | Test method (in accordance with IEC 61300-3-6, method 2) | 37 |
| 10.4.2 | Treatment of results..... | 38 |
| 10.4.3 | Measurement uncertainty..... | 39 |
| 10.5 | Optical fibre length..... | 39 |
| 10.5.1 | Test method | 39 |
| 10.5.2 | Measurement uncertainty..... | 41 |
| 10.5.3 | Treatment of results..... | 41 |
| 10.6 | Attenuation of cords | 41 |
| 10.6.1 | Test method | 41 |
| 10.6.2 | Treatment of results..... | 42 |
| 11 | Inspection of cabling and cabling components | 42 |
| 11.1 | Optical fibre continuity | 42 |
| 11.2 | Cabling polarity..... | 42 |
| 11.3 | Optical fibre cable length | 42 |
| 11.4 | Inspection of optical fibre end faces | 43 |
| 11.5 | Optical fibre core size | 43 |
| Annex A (normative) | Launch modal conditions for testing multimode optical fibre cabling | 44 |
| Annex B (normative) | Visual inspection criteria for connectors | 45 |
| Annex C (informative) | Optical time domain reflectometry | 46 |
| C.1 | Operational capability | 46 |
| C.1.1 | Effective characterization..... | 46 |
| C.1.2 | Dynamic range | 46 |
| C.1.3 | Pulse width | 46 |
| C.1.4 | Integration or sample count | 46 |
| C.2 | Limitations of OTDR capability | 47 |
| C.2.1 | Minimum lengths of operation – Attenuation dead zone | 47 |
| C.2.2 | Ghosting | 48 |

| | | |
|---|---|----|
| C.2.3 | Effective group index of refraction | 49 |
| C.2.4 | Backscattering coefficient | 49 |
| Annex D (normative) | Inspection and testing of test and substitution test cords | 50 |
| D.1 | General requirements | 50 |
| D.2 | Attenuation (test and substitution test cord reference connections) | 50 |
| Annex E (informative) | Enhanced three-test-cord and one-test-cord reference methods for link and channel attenuation | 52 |
| E.1 | Reference methods for link attenuation | 52 |
| E.2 | One-test-cord reference method for link attenuation | 52 |
| E.3 | Test method for channel attenuation | 52 |
| Annex F (informative) | Quality planning | 53 |
| F.1 | Inspection and test schedules | 53 |
| F.2 | Stage 1 inspection and testing | 53 |
| F.3 | Stage 2 testing | 53 |
| F.3.1 | Basic test group | 53 |
| F.3.2 | Extended test group | 54 |
| Annex G (informative) | Examples of calculations of channel and permanent link limits | 55 |
| G.1 | Channel measurement | 55 |
| G.2 | Permanent link measurement | 55 |
| Annex H (informative) | Cleaning and inspection of fibre optic connections | 57 |
| Bibliography | | 58 |

INTERNATIONAL ELECTROTECHNICAL COMMISSION

INFORMATION TECHNOLOGY – IMPLEMENTATION AND OPERATION OF CUSTOMER PREMISES CABLING –

Part 3: Testing of optical fibre cabling

FOREWORD

- 1) ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.
- 2) The formal decisions or agreements of IEC and ISO on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees and ISO member bodies.
- 3) IEC, ISO and ISO/IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees and ISO member bodies in that sense. While all reasonable efforts are made to ensure that the technical content of IEC, ISO and ISO/IEC publications is accurate, IEC or ISO cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees and ISO member bodies undertake to apply IEC, ISO and ISO/IEC publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any ISO, IEC or ISO/IEC publication and the corresponding national or regional publication should be clearly indicated in the latter.
- 5) ISO and IEC do not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. ISO or IEC are not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or ISO or its directors, employees, servants or agents including individual experts and members of their technical committees and IEC National Committees or ISO member bodies for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication of, use of, or reliance upon, this ISO/IEC Publication or any other IEC, ISO or ISO/IEC publications.
- 8) Attention is drawn to the normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this ISO/IEC Publication may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

International Standard ISO/IEC 14763-3 was prepared by subcommittee 25: Interconnection of information technology equipment, of ISO/IEC joint technical committee 1: Information technology.

This second edition cancels and replaces the first edition published in 2006 and its Amendment 1:2009.

This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- general requirements (Clause 5) have been revised and the concept of normalization has been replaced by reference measurements;
- OTDR characterization (6.2) and requirements for cabling interface adapters (6.3) and test cords have been revised and requirements for single-mode fibre test cords (6.3.4) have been removed;
- enhanced three-test-cord reference method has been introduced (9.1.1.2);
- requirements for the attenuation measurement of cords (10.6) have been revised;
- Annex A "Launched modal distribution (LMD)" has been simplified and the new title now reads "Launched modal conditions for testing multimode optical fibre cabling";
- visual inspection criteria for connectors have been reworked (Annex B);
- information on optical time domain reflectometry (Annex C) has been revised;
- examples of calculations of channel and permanent link limits (Annex G) have been revised;
- and information regarding cleaning and inspection of fibre optic connections have been added (Annex H).

A list of all parts in the ISO/IEC 14763 series, published under the general title *Information technology – Implementation and operation of customer premises cabling*, can be found on the IEC website.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

The contents of the corrigendum of March 2015 have been included in this copy.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INTRODUCTION

This International Standard is one of four prepared in support of International Standard ISO/IEC 11801 and other cabling standards.

Figure 1 below shows the inter-relationship between ISO/IEC 11801 and other International Standards and for cabling systems with related standards.

Figure 1 – Relationship of related International Standards

ISO/IEC 14763-3 details the inspection and test procedures for optical fibre cabling,

- designed in accordance with premises cabling standards including ISO/IEC 11801, ISO/IEC 24764, ISO/IEC 24702 and ISO/IEC 15018, and
- installed according to the requirements and recommendations of ISO/IEC 14763-2.

Users of this International Standard should be familiar with relevant premises cabling standards and ISO/IEC 14763-2.

The quality plan for each installation will define the acceptance tests and sampling levels selected for that installation. Requirements and recommendations for the development of a quality plan are described in ISO/IEC 14763-2.

NOTE JTC 1/SC 25, in cooperation with IEC/TC 86, is currently developing an overall quantitative model to calculate total measurement uncertainty as stated in the reference planes of ISO/IEC 11801. When such a model has been verified, it is expected to be incorporated into this standard in form of an Amendment, thereby removing pertinent clauses currently marked "ffs" (for further study).

INFORMATION TECHNOLOGY – IMPLEMENTATION AND OPERATION OF CUSTOMER PREMISES CABLING –

Part 3: Testing of optical fibre cabling

1 Scope

This part of ISO/IEC 14763 specifies systems and methods for the inspection and testing of installed optical fibre cabling designed in accordance with premises cabling standards including ISO/IEC 11801, ISO/IEC 24764, ISO/IEC 24702 and ISO/IEC 15018. The test methods refer to existing standards-based procedures where they exist.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
