13.15.2 Characteristics Field Table	33
13.15.3 Source volume File Data	35
13.15.4 Source directory File Data	35
13.15.5 Source file File data	36
13.15.6 Transaction Set File data	37
13.15.7 Streams	38
13.16 Levels of partition interchange	41
13.16.1 Level 1 of partition interchange	41
13.16.2 Level 2 of partition interchange	41
14 Requirements for systems	41
14.1 Requirements for the description of systems	41
14.2 Requirements for an originating system	41
14.2.1 General	41
14.2.2 Mandatory access by user	41
14.2.3 Optional access by user	41
14.2.4 Volume characteristics	42
14.2.5 File Set characteristics	42
14.2.6 Recording of Bit Data	42
14.2.7 Cyclic Redundancy Check (CRC)	42
14.3 Requirements for a receiving system	42
14.3.1 General	42
14.3.2 Levels of conformance	43
Annexes	
A - Structure of the Field Identifier	44
B - Specification of the length of data in Fields	48
C - Field specification	50
D - Numerical list of the Field Identifiers specified by this International Standard	80
E - Numerical list of Field Identifiers which are obsolete (O) or not specified by this International Standard	87

Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

International Standard ISO/IEC 14863 was prepared by ECMA (as Standard ECMA-208) and was adopted, under a special “fast-track procedure”, by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, in parallel with its approval by national bodies of ISO and IEC.

Annexes A to C form an integral part of this International Standard. Annexes D and E are for information only.

Introduction

The System Independent Data Format Association (SIDF) was formed in early 1993 by a consortium of industries. ECMA TC15 adopted the work of this committee in early 1994 and developed Standard ECMA-208 on the basis of the SIDF specification.

Information technology – System-Independent Data Format (SIDF)

Section 1 - General

1 Scope

This International Standard specifies a logical format for information interchange and secondary data storage. The format provides a System-Independent Data Format (SIDF) for the representation of primary file system information. This information includes, among other things, data, attributes and characteristics. This International Standard specifies

- the organization of the information on target media,
- requirements for originating and receiving systems for the processing of the information.

2 Conformance

2.1 Conformance of Media Volumes

A Volume shall be in conformance with this International Standard if all information recorded on it meets the relevant requirements of sections 2 and 3 for the level of partition claimed.

2.2 Conformance of an originating system

An originating system shall be in conformance with this International Standard if it meets the requirements of 14.2.

2.3 Conformance of a receiving system

A receiving system shall be in conformance with this International Standard if it meets the requirements of 14.3 for the Level of conformance claimed.

3 Normative references

The following standards contain provisions which, through reference in this text, constitute provisions of this International Standard. At the time of publication, the editions indicated were valid. All standards are subject to revision, and parties to agreements based on this International Standard are encouraged to investigate the possibility of applying the most recent editions of the standards indicated below. Members of IEC and ISO maintain registers of currently valid International Standards.
