Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT) see the following URL: [Foreword - Supplementary information](#)

The committee responsible for this document is ISO/IEC JTC 1, *Information technology, SC 29, Coding of audio, picture, multimedia and hypermedia information*.

ISO/IEC 15938 consists of the following parts, under the general title *Information technology — Multimedia content description interface*:

- *Part 1: Systems*
- *Part 2: Description definition language*
- *Part 3: Visual*
- *Part 4: Audio*
- *Part 5: Multimedia description schemes*
- *Part 6: Reference software*
- *Part 7: Conformance testing*
- *Part 8: Extraction and use of MPEG-7 descriptions*
- *Part 9: Profiles and levels*
- *Part 10: Schema definition*
- *Part 11: MPEG-7 profile schemas*
- *Part 12: Query format*
- *Part 13: Compact descriptors for visual search*

Introduction

This International Standard, also known as “Multimedia Content Description Interface,” provides a standardized set of technologies for describing multimedia content. It addresses a broad spectrum of multimedia applications and requirements by providing a metadata system for describing the features of multimedia content.

The following are specified in this International Standard:

- **Description schemes (DS)** describe entities or relationships pertaining to multimedia content. Description schemes specify the structure and semantics of their components, which may be Description Schemes, descriptors, or datatypes.
- **Descriptors (D)** describe features, attributes, or groups of attributes of multimedia content.
- **Datatypes** are the basic reusable datatypes employed by description schemes and descriptors.
- **Systems tools** support delivery of descriptions, multiplexing of descriptions with multimedia content, synchronization, file format, and so forth.

This International Standard is subdivided into 13 parts:

- **Part 1 — Systems:** specifies the tools for preparing descriptions for efficient transport and storage, compressing descriptions, and allowing synchronization between content and descriptions.
- **Part 2 — Description definition language:** specifies the language for defining the International Standard set of description tools (DSs, Ds, and datatypes) and for defining new description tools.
- **Part 3 — Visual:** specifies the description tools pertaining to visual content.
- **Part 4 — Audio:** specifies the description tools pertaining to audio content.
- **Part 5 — Multimedia description schemes:** specifies the generic description tools pertaining to multimedia including audio and visual content.
- **Part 6 — Reference software:** provides a software implementation of the International Standard.
- **Part 7 — Conformance testing:** specifies the guidelines and procedures for testing conformance of implementations of the International Standard.
- **Part 8 — Extraction and use of MPEG-7 descriptions:** provides guidelines and examples of the extraction and use of descriptions.
- **Part 9 — Profiles and levels:** provides guidelines and standard profiles.
- **Part 10 — Schema definition:** specifies the schema using description definition language.
- **Part 11 — Profile Schemas:** listing of profile schemas using description definition language.
- **Part 12 — Query format:** contains the tools of the MPEG Query Format (MPQF).
- **Part 13 — Compact descriptors for visual search:** specifies an image description tool for visual search applications.

Information technology — Multimedia content description interface —

Part 13: Compact descriptors for visual search

1 Scope

The structure of this part of ISO/IEC 15938 is as follows. [Clauses 2](#) and [3](#) specify the terms, abbreviations, symbols, and conventions used in the International Standard. [Clause 4](#) specifies the binary representation syntax and descriptor component semantics for a CDVS image descriptor. [Clause 5](#) specifies the extraction and encoding process for a CDVS image descriptor. [Annexes A-J](#) specify information relevant to the encoding process of [Clause 5](#). [Annex K](#) contains an informative description of the decoding process of a CDVS image descriptor.

This part of the MPEG-7 standard specifies an image description tool designed to enable efficient and interoperable visual search applications, allowing visual content matching in images. Visual content matching includes matching of views of objects, landmarks, and printed documents, while being robust to partial occlusions as well as changes in viewpoint, camera parameters, and lighting conditions.
