Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of conformity assessment, the ISO Committee on conformity assessment (CASCO) is responsible for the development of International Standards and Guides.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

In other circumstances, particularly when there is an urgent market requirement for such documents, a technical committee may decide to publish other types of document:

- an ISO/IEC Publicly Available Specification (ISO/IEC PAS) represents an agreement between technical experts in an ISO working group and is accepted for publication if it is approved by more than 50 % of the members of the parent committee casting a vote;
- an ISO/IEC Technical Specification (ISO/IEC TS) represents an agreement between the members of a technical committee and is accepted for publication if it is approved by 2/3 of the members of the committee casting a vote.

An ISO/PAS or ISO/TS is reviewed after three years in order to decide whether it will be confirmed for a further three years, revised to become an International Standard, or withdrawn. If the ISO/PAS or ISO/TS is confirmed, it is reviewed again after a further three years, at which time it must either be transformed into an International Standard or be withdrawn.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO/IEC TS 17023 was prepared by the *ISO Committee on conformity assessment (CASCO)*.

It was circulated for voting to the national bodies of both ISO and IEC, and was approved by both organizations.

Introduction

This Technical Specification provides guidance on the application of the relevant requirements of ISO/IEC 17021:2011 for determining the duration of management system certification audits. It provides certification bodies with a framework for achieving a basic level of consistency for determining the duration of management system certification audits. It can be also considered for the determination of duration of other types of audits.

The growth in the number of management system standards and certification schemes has highlighted the need for a document providing guidance to ensure that the factors influencing the duration of management system certification audits are considered.

This Technical Specification enables clients of certification bodies and other interested parties (e.g. scheme owners, regulators, accreditation bodies) to understand how different factors contribute to the duration of management system certification audits.

This Technical Specification does not define tables, formulas, or other methods to calculate the duration of management system certification audits for specific schemes, but it identifies factors to be considered when such tables or formulas are developed.

In this Technical Specification, the following verbal forms are used:

- “should” indicates a recommendation;
- “may” indicates a permission;
- “can” indicates a possibility or a capability.

The verbal form “shall”, which indicates a requirement, is not used in this Technical Specification because only guidance is provided.

Further details can be found in the ISO/IEC Directives, Part 2.

Conformity assessment — Guidelines for determining the duration of management system certification audits

1 Scope

This Technical Specification provides guidelines for determining the duration of management system certification audits, to the bodies providing audit and certification of management systems and to those that develop and maintain certification schemes.

NOTE 1 This Technical Specification is also intended to address the needs of other interested parties (e.g. regulators, accreditation bodies) when determining the duration of management system certification audits.

NOTE 2 Where additional specific requirements related to the duration of management system certification audits have been established for a specific certification scheme (e.g. ISO/TS 22003 for food safety management systems) or other requirements as established by scheme owners or regulators, these can be applied.

2 Normative references

The following referenced documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
