Programming Languages — Technical Specification for C++ Extensions for Parallelism

Langages de programmation — Spécification technique pour les extensions C++ relatives au parallélisme
Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT) see the following URL: Foreword - Supplementary information

ISO/IEC TS 19570 was prepared by Joint Technical Committee ISO/IEC JTC 1, Information technology, Subcommittee SC 22, Programming languages, their environments and system software interfaces.
Contents

1 General ................................................................. 4
  1.1 Scope ............................................................... 4

  2.1 In general ......................................................... 6
  2.2 Header <experimental/execution_policy> synopsis ....... 6
  2.3 Execution policy type trait .................................... 7
  2.4 Sequential execution policy .................................. 7
  2.5 Parallel execution policy ...................................... 7
  2.6 Parallel+Vector execution policy ............................ 7
  2.7 Dynamic execution policy ...................................... 8
    2.7.1 execution_policy construct/assign ..................... 8
    2.7.2 execution_policy object access ....................... 9
  2.8 Execution policy objects ...................................... 9

3 Parallel exceptions .................................................. 10
  3.1 Exception reporting behavior ................................ 10
  3.2 Header <experimental/exception_list> synopsis .......... 10

4 Parallel algorithms .................................................. 12
  4.1 In general ......................................................... 12
    4.1.1 Requirements on user-provided function objects .... 12
    4.1.2 Effect of execution policies on algorithm execution .. 12
    4.1.3 ExecutionPolicy algorithm overloads .................. 14
  4.2 Definitions ....................................................... 14
  4.3 Non-Numeric Parallel Algorithms ............................ 15
    4.3.1 Header <experimental/algorithim> synopsis .......... 15
    4.3.2 For each .................................................. 16
  4.4 Numeric Parallel Algorithms .................................. 17
    4.4.1 Header <experimental/numeric> synopsis .............. 17
    4.4.2 Reduce .................................................... 20
    4.4.3 Exclusive scan .......................................... 20
    4.4.4 Inclusive scan .......................................... 21
    4.4.5 Transform reduce ........................................ 22
    4.4.6 Transform exclusive scan .............................. 22
    4.4.7 Transform inclusive scan .............................. 23
1 General

1.1 Scope

1 This Technical Specification describes requirements for implementations of an interface that computer programs written in the C++ programming language may use to invoke algorithms with parallel execution. The algorithms described by this Technical Specification are realizable across a broad class of computer architectures.

2 This Technical Specification is non-normative. Some of the functionality described by this Technical Specification may be considered for standardization in a future version of C++, but it is not currently part of any C++ standard. Some of the functionality in this Technical Specification may never be standardized, and other functionality may be standardized in a substantially changed form.

3 The goal of this Technical Specification is to build widespread existing practice for parallelism in the C++ standard algorithms library. It gives advice on extensions to those vendors who wish to provide them.

1.2 Normative references

1 The following referenced document is indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

   — ISO/IEC 14882:—¹, Programming Languages — C++

2 ISO/IEC 14882:— is herein called the C++ Standard. The library described in ISO/IEC 14882:— clauses 17-30 is herein called the C++ Standard Library. The C++ Standard Library components described in ISO/IEC 14882:— clauses 25, 26.7 and 20.7.2 are herein called the C++ Standard Algorithms Library.

3 Unless otherwise specified, the whole of the C++ Standard’s Library introduction (C++14 §17) is included into this Technical Specification by reference.
