## Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)) or the IEC list of patent declarations received (see <http://patents.iec.ch>).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html).

This document was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 34, *Document description and processing languages*.

This second edition cancels and replaces the first edition (ISO/IEC 19757-7:2009), which has been technically revised. It also incorporates the Technical Corrigendum ISO/IEC 19757-7:2009/Cor 1:2015.

The main changes compared to the previous edition are as follows:

- addition of validation of grapheme clusters such as 'n' followed by COMBINING GRAVE ACCENT (U+0300) and a CJK unified ideograph followed by a variation selector.
- addition of the Unicode Ideographic Variation Database as a registry.

A list of all parts in the ISO/IEC 19757 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html).

## Introduction

ISO/IEC 19757 (all parts) defines a set of Document Schema Definition Languages (DSDL) that can be used to specify one or more validation processes performed against Extensible Markup Language (XML) documents. A number of validation technologies are standardized in DSDL to complement those already available as standards or from industry.

The main objective of ISO/IEC 19757 (all parts) is to bring together different validation-related technologies to form a single extensible framework that allows technologies to work in series or in parallel to produce a single or a set of validation results. The extensibility of DSDL accommodates validation technologies not yet designed or specified.

This document provides a language for describing character repertoires. Descriptions in this language can be referenced from schemas. Furthermore, they can also be referenced from forms and stylesheets.

Descriptions of character repertoires doesn't need to be exact. Non-exact descriptions are made possible by kernels and hulls, which provide the lower and upper limits, respectively.

The structure of this document is as follows. [Clause 5](#) provides an informal overview of CREPDL. [Clause 6](#) specifies the syntax of CREPDL schemas. [Clause 7](#) specifies the semantics of a correct CREPDL schema; the semantics specify when a code point or code point sequence is in a character repertoire described by a CREPDL schema. [Clause 8](#) defines the behaviour of CREPDL processors. Finally, [Annex A](#) describes differences of conformant CREPDL processors; [Annex B](#) provides examples of CREPDL schemas.

Although the first edition was restricted to the validation of characters, this edition can also enable the validation of grapheme clusters such as 'n' followed by COMBINING GRAVE ACCENT (U+0300) and a CJK unified ideograph followed by a variation selector.

CREPDL schemas conformant to the first edition do not conform to this edition. In particular, this edition changes the namespace name for CREPDL schemas.

# Information technology — Document Schema Definition Languages (DSDL) —

## Part 7: Character Repertoire Description Language (CREPDL)

### 1 Scope

This document specifies a Character Repertoire Description Language (CREPDL). A CREPDL schema describes a character repertoire. A stream of UCS code points can be validated against a CREPDL schema.

### 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
