Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a Joint Technical Committee, ISO/IEC JTC 1.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of the Joint Technical Committee is to prepare International Standards. Draft International Standards adopted by the Joint Technical Committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75% of the national bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

ISO/IEC 29124 was prepared by Joint Technical Committee ISO/IEC JTC 1, Information technology, Subcommittee SC 22, Programming languages, their environments and system software interfaces.
Introduction

This International Standard is divided into three major subdivisions:

- preliminary elements (Clauses 1–3),
- indicating conformance (Clause 4), and
- the library facilities (Clauses 5–6).

Footnotes are provided to emphasize consequences of the rules described in that subclause or elsewhere in this International Standard. References are used to refer to other related documents and subclauses. A bibliography lists documents that are non-normatively cited in this International Standard, or that were referred to during its preparation.

The provisions of this International Standard are based on 5.2 (“Mathematical special functions”) of ISO/IEC TR 19768:2007 [2]. That subclause also served as a basis for a similar International Standard [3]. Because of their common origin, it is intended that both these International Standards specify substantially identical syntax and semantics to the extent permitted by each Standard’s programming language.
1 Scope

1.1 Purpose and intent

This International Standard specifies extensions to the C++ standard library as defined in the International Standard for the C++ programming language [ISO/IEC 14882:2003].

1.2 Relation to C++ Standard Library Introduction

1.3 Categories of extensions

This International Standard specifies extensions to the C++ standard library to support mathematical special functions.
2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

- ISO 80000-2:2009, *Quantities and units — Part 2: Mathematical signs and symbols to be used in the natural sciences and technology*
