## CONTENTS

FOREWORD.....	5
INTRODUCTION.....	6
1 Scope.....	8
2 Normative references .....	8
3 Terms, definitions and abbreviations .....	9
3.1 Terms and definitions.....	9
3.2 Abbreviations .....	11
4 Conformance.....	12
5 Overview of bonding networks .....	12
6 Selection of the telecommunications bonding network approach.....	13
6.1 Assessment of the impact of the telecommunications bonding network on the interconnection of telecommunications equipment .....	13
6.2 Telecommunications bonding networks .....	14
6.3 Telecommunications bonding network performance .....	15
6.3.1 General .....	15
6.3.2 Requirements .....	16
6.3.3 DC resistance measurements .....	17
7 Common features .....	17
7.1 General.....	17
7.2 Protective bonding networks .....	18
7.2.1 Protective bonding network conductors (PBNCs) .....	18
7.2.2 Main earthing terminal (MET).....	18
7.3 Telecommunications entrance facility (TEF).....	18
7.4 Telecommunications bonding network components .....	18
7.4.1 Telecommunications bonding network conductors .....	18
7.4.2 Telecommunications bonding network connections .....	19
7.5 Cabinets, frames and racks.....	19
7.5.1 External connections to a bonding network .....	19
7.5.2 Rack bonding conductors.....	20
7.5.3 Internal connections .....	21
7.6 Miscellaneous bonding connections .....	22
7.6.1 General .....	22
7.6.2 Bonding conductors for d.c. resistance control.....	22
7.6.3 Bonding conductors for impedance control .....	22
7.7 Documentation.....	23
8 Dedicated telecommunications bonding network.....	23
8.1 General.....	23
8.2 Components .....	24
8.2.1 Primary bonding busbar (PBB).....	24
8.2.2 Secondary bonding busbar (SBB) .....	25
8.2.3 Bonding conductors for d.c. resistance control.....	25
8.2.4 Bonding conductors for impedance control .....	26
8.3 Implementation .....	27
8.3.1 Primary bonding busbar (PBB).....	27
8.3.2 Secondary bonding busbar (SBB) .....	28

8.3.3	Telecommunications bonding conductor (TBC) .....	28
8.3.4	Telecommunications bonding backbone (TBB).....	29
8.3.5	Backbone bonding conductor (BBC) .....	29
8.3.6	Bonds to continuous conductive pathway systems .....	29
8.3.7	Bonds to structural metal .....	29
9	Local telecommunications bonding networks in conjunction with protective bonding networks .....	30
9.1	Bonding for local distribution .....	30
9.1.1	Star protective bonding networks .....	30
9.1.2	Ring protective bonding networks .....	31
9.2	Telecommunications bonding conductors .....	32
9.2.1	Bonding conductors for d.c. resistance control.....	32
9.2.2	Bonding conductors for impedance control .....	32
9.3	Bonding for areas of telecommunications equipment concentration .....	33
10	Local telecommunications bonding networks in conjunction with dedicated telecommunications bonding networks.....	33
10.1	Bonding for areas of telecommunications equipment concentration .....	33
10.1.1	Requirements .....	33
10.1.2	Recommendations .....	33
10.1.3	Cabinets, frames and racks .....	33
10.2	Telecommunications equipment bonding conductors (TEBC) .....	33
10.2.1	TEBC for d.c. resistance control .....	33
10.2.2	TEBC for impedance control .....	34
10.2.3	Implementation .....	34
11	Mesh bonded networks .....	34
11.1	General.....	34
11.2	Mesh bonding alternatives .....	35
11.2.1	Local mesh bonding (MESH-IBN) networks.....	35
11.2.2	MESH-BN .....	37
11.3	Bonding conductors of a mesh bonding network.....	38
11.3.1	Requirements .....	38
11.3.2	Recommendations .....	38
11.4	Bonding conductors to the mesh bonding network.....	38
11.5	Supplementary bonding grid (SBG).....	39
11.6	System reference potential plane (SRPP) .....	39
11.6.1	General .....	39
11.6.2	Access floors .....	40
11.6.3	Transient suppression plate (TSP).....	41
Annex A (normative) Maintenance of telecommunications bonding network performance .....		42
A.1	General.....	42
A.2	Periodic activity .....	42
A.2.1	Schedule .....	42
A.2.2	Implementation .....	42
A.3	Causes of performance deterioration .....	43
A.3.1	Galvanic corrosion.....	43
A.3.2	Requirements .....	43
Annex B (normative) Bonding conductor cross-sectional area .....		44
Annex C (informative) Alternative terminology.....		45

Bibliography.....	46
Figure 1 – Schematic relationship between ISO/IEC 30129 and other relevant standards.....	7
Figure 2 – Schematic of telecommunications equipment distribution and associated bonding connections .....	13
Figure 3 – Example of three methods of equipment and rack bonding .....	20
Figure 4 – Example of a bond connection from a cabinet to the cabinet door .....	22

## INFORMATION TECHNOLOGY –

# TELECOMMUNICATIONS BONDING NETWORKS FOR BUILDINGS AND OTHER STRUCTURES

### FOREWORD

- 1) ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.
- 2) The formal decisions or agreements of IEC and ISO on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees and ISO member bodies.
- 3) IEC, ISO and ISO/IEC publications have the form of recommendations for international use and are accepted by IEC National Committees and ISO member bodies in that sense. While all reasonable efforts are made to ensure that the technical content of IEC, ISO and ISO/IEC publications is accurate, IEC or ISO cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees and ISO member bodies undertake to apply IEC, ISO and ISO/IEC publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any ISO, IEC or ISO/IEC publication and the corresponding national or regional publication should be clearly indicated in the latter.
- 5) ISO and IEC do not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. ISO or IEC are not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or ISO or its directors, employees, servants or agents including individual experts and members of their technical committees and IEC National Committees or ISO member bodies for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication of, use of, or reliance upon, this ISO/IEC publication or any other IEC, ISO or ISO/IEC publications.
- 8) Attention is drawn to the normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this ISO/IEC publication may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

International Standard ISO/IEC 30129 was prepared by subcommittee 25: Interconnection of information technology equipment, of ISO/IEC joint technical committee 1: Information technology.

This International Standard has been approved by vote of the member bodies, and the voting results may be obtained from the address given on the second title page.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

**IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**

## INTRODUCTION

This International Standard specifies requirements and recommendations for the design and installation of connections (bonds) between various electrically conductive elements in buildings and other structures, during their construction or refurbishment, in which information technology (IT) and, more generally, telecommunications equipment is intended to be installed in order to

- a) minimise the risk to the correct function of that equipment and interconnecting cabling from electrical hazards,
- b) provide the telecommunications installation with a reliable signal reference – which may improve immunity from electromagnetic interference (EMI).

This International Standard

- specifies assessment criteria to determine the relevant bonding configurations that are appropriate,
- enables the implementation of any bonding configurations that may be necessary by means of either
  - the provision of a bonding network that utilises the existing protective bonding network for electrical safety, or
  - the provision of a dedicated bonding network for the telecommunications infrastructure.

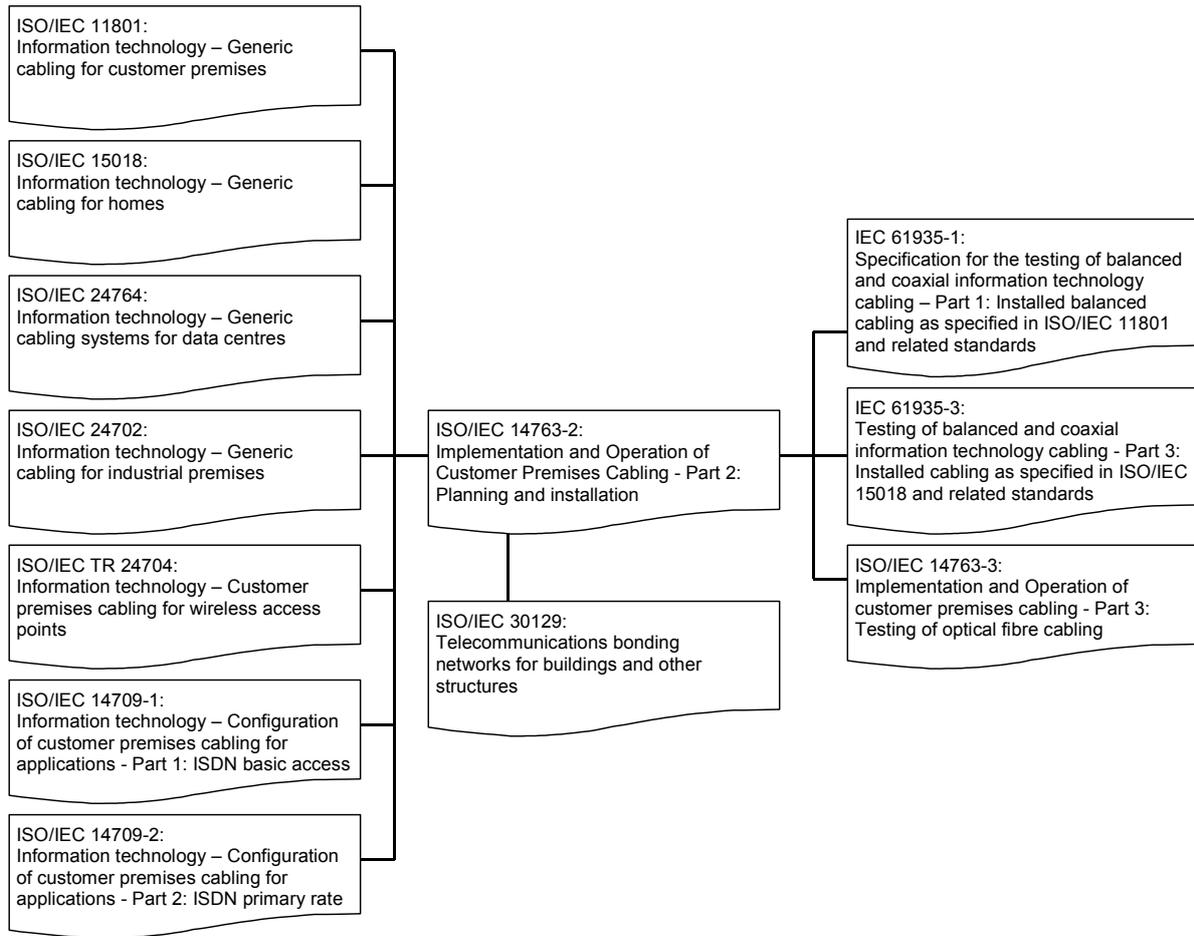

This standard is intended for

- building architects, owners and managers,
- designers and installers of electrical and telecommunications cabling installations.

This International Standard is one of a number of documents prepared in support of international standards and technical reports for cabling design produced by ISO/IEC JTC 1/SC 25. Figure 1 shows the inter-relationship between these standards and technical reports.

Users of this standard should be familiar with all applicable cabling design and installation standards.

NOTE Telecommunications infrastructure affects raw material consumption. The infrastructure design and installation methods also influence product life and sustainability of electronic equipment life cycling. These aspects of telecommunications infrastructure impact our environment. Since building life cycles are typically planned for decades, technological electronic equipment upgrades are necessary. The telecommunications infrastructure design and installation process magnifies the need for sustainable infrastructures with respect to building life, electronic equipment life cycling and considerations of effects on environmental waste. Telecommunications designers are encouraged to research local building practices for a sustainable environment and conservation of fossil fuels as part of the design process.

## INFORMATION TECHNOLOGY –

# TELECOMMUNICATIONS BONDING NETWORKS FOR BUILDINGS AND OTHER STRUCTURES

## 1 Scope

This International Standard specifies requirements and recommendations for the design and installation of connections (bonds) between various electrically conductive elements in buildings and other structures, during their construction or refurbishment, in which information technology (IT) and, more generally, telecommunications equipment is intended to be installed in order to

- a) minimise the risk to the correct function of that equipment and interconnecting cabling from electrical hazards,
- b) provide the telecommunications installation with a reliable signal reference – which may improve immunity from electromagnetic interference (EMI).

The requirements of this International Standard are applicable to the buildings and other structures within premises addressed by ISO/IEC 14763-2 (e.g. residential, office, industrial and data centres) but information given in this International Standard may be of assistance for other types of buildings and structures.

NOTE Telecommunications centres (operator buildings) are addressed by ITU-T K.27.

This International Standard does not apply to power supply distribution of voltages over AC 1 000 V.

Electromagnetic compatibility (EMC) requirements and safety requirements for power supply installation are outside the scope of this International Standard and are covered by other standards and regulations. However, information given in this International Standard may be of assistance in meeting the requirements of these standards and regulations.

## 2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 60364-4-41, *Low-voltage electrical installations – Part 4-41: Protection for safety – Protection against electric shock*

IEC 60364-4-44:2007, *Low-voltage electrical installations – Part 4-44: Protection for safety – Protection against voltage disturbances and electromagnetic disturbances*

IEC 60364-5-54, *Low-voltage electrical installations – Part 5-54: Selection and erection of electrical equipment – Earthing arrangements and protective conductors*

IEC 60950-1, *Information technology equipment – Safety – Part 1: General requirements*

IEC 61140, *Protection against electric shock – Common aspects for installation and equipment*
