## Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives) or [www.iec.ch/members\\_experts/refdocs](http://www.iec.ch/members_experts/refdocs)).

ISO and IEC draw attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO and IEC take no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO and IEC had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at [www.iso.org/patents](http://www.iso.org/patents) and <https://patents.iec.ch>. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html). In the IEC, see [www.iec.ch/understanding-standards](http://www.iec.ch/understanding-standards).

This document was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 32, *Data management and interchange*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html) and [www.iec.ch/national-committees](http://www.iec.ch/national-committees).

## Introduction

This document is a high level, principles-based advisory International Standard. It sets out a framework of two elements with the relevant concepts, that can be referenced by organizations, persons and systems that use data. The framework and concepts outlined in this standard should be read in conjunction with the terms and definitions contained in ISO/IEC 5207.

Organizations of all types (including commercial enterprises, government agencies, not-for-profit organizations), sizes and purposes depend on the use of data for day-to-day business operations and are increasingly reliant on data dependent systems such as information technology management, cloud computing, big data, Internet of Things, and artificial intelligence.

There are numerous approaches to data usage, from the most complex which includes highly sensitive, personal or confidential information to the least sophisticated data capture systems. Within each data usage scenario, there are different approaches to system integrity, data quality, data user capabilities, and organizational governance.

This document has been prepared using a principles-based approach to encourage organizations to implement data governance to manage risks at each stage of data use, exchange or sharing. This approach supports organizations seeking greater value, knowledge and insights from data while providing a framework for data users. As data are essential to a broad range of roles within an organization, it is imperative that all users have a fundamental understanding of data use to ensure appropriate data management. There is a risk that as the use of data is ubiquitous within organizations, users without appropriate knowledge, context and expertise can inadvertently lead to incorrect data usage.

The sharing or exchange of data can involve multiple individuals, systems or organizations with different processes and procedures. Furthermore, each entity involved in the sharing or exchange of data can have different approaches to security, privacy, data sensitivity or legal considerations. While data usage activities can be managed under different governance arrangements such as a formal contract or data sharing agreement, there are many steps involved in data usage that may not be formalized. This document uses a risk identification and management methodology which can be considered by any data user, be they an individual or organization. There can be an advantage for organizations operating with existing data or technology governance processes, such as those outlined in International Standards related to the governance of information technology, such as ISO/IEC 38500 or ISO/IEC 38505-1.

In addition, organizations can consider the suitability of IT systems, security and storage requirements to support governance capabilities which are addressed within ISO/IEC 27001, ISO/IEC 27701 and ISO/IEC 27040.

# Information technology — Data usage — Guidance for data usage

## 1 Scope

This document provides high-level guidance to data users, whether organizations or individuals, to assist in realizing the benefits from data usage while managing risks.

## 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
