## CONTENTS

FOREWORD.....	5
INTRODUCTION.....	6
1 Scope.....	7
2 Normative references .....	7
3 Terms and definitions .....	7
4 Symbols and abbreviated terms.....	7
5 Use case scenarios .....	7
5.1 General.....	7
5.2 Use cases.....	7
6 Description of use case .....	9
6.1 Agricultural product tracing .....	9
6.1.1 Scope and objectives of use case.....	9
6.1.2 Narrative of use case.....	9
6.1.3 Actors: people, components, systems, integrated systems, applications and organizations .....	10
6.1.4 Issues: legal contracts, legal regulations, and constraints.....	11
6.1.5 Reference standards and/or standardization committees .....	11
6.1.6 Relation with other known use cases .....	11
6.1.7 General remarks.....	11
6.1.8 Data security, privacy and trustworthiness.....	11
6.1.9 Conformity aspects .....	11
6.1.10 User requirements and interactions with other actors.....	11
6.1.11 Drawing of use case .....	12
6.1.12 Data flow diagram of use case.....	12
6.1.13 Sequence diagram of use case.....	13
6.2 Financial services for fish farming.....	14
6.2.1 Scope and objectives of use case.....	14
6.2.2 Narrative of use case.....	15
6.2.3 Actors: people, components, systems, integrated systems, applications and organizations .....	15
6.2.4 Issues: legal contracts, legal regulations, and constraints.....	16
6.2.5 Reference standards and/or standardization committees .....	16
6.2.6 Relation with other known use cases .....	16
6.2.7 General remarks.....	16
6.2.8 Data security, privacy and trustworthiness.....	16
6.2.9 Conformity aspects .....	17
6.2.10 User requirements and interactions with other actors.....	17
6.2.11 Drawing of use case .....	17
6.2.12 Data flow diagram of use case.....	18
6.2.13 Sequence diagram of use case.....	19
6.3 Chattel mortgage services .....	21
6.3.1 Scope and objectives of use case.....	21
6.3.2 Narrative of use case.....	21
6.3.3 Actors: people, components, systems, integrated systems, applications and organizations .....	21
6.3.4 Issues: legal contracts, legal regulations, and constraints.....	22
6.3.5 Reference standards and/or standardization committees .....	22

6.3.6	Relation with other known use cases .....	22
6.3.7	General remarks .....	22
6.3.8	Data security, privacy and trustworthiness .....	22
6.3.9	Conformity aspects .....	23
6.3.10	User requirements and interactions with other actors.....	23
6.3.11	Drawing of use case .....	23
6.3.12	Data flow diagram of use case.....	24
6.3.13	Sequence diagram(s) of use case.....	25
6.4	Distributed energy trading .....	26
6.4.1	Scope and objectives of use case.....	26
6.4.2	Narrative of use case.....	26
6.4.3	Actors: people, components, systems, integrated systems, applications and organizations .....	27
6.4.4	Issues: legal contracts, legal regulations, and constraints.....	28
6.4.5	Reference standards and/or standardization committees .....	28
6.4.6	Relation with other known use cases .....	28
6.4.7	General remarks .....	28
6.4.8	Data security, privacy and trustworthiness .....	28
6.4.9	Conformity aspects .....	29
6.4.10	User requirements and interactions with other actors.....	29
6.4.11	Drawing of use case .....	29
6.4.12	Data flow diagram of use case.....	30
6.4.13	Sequence diagram(s) of use case.....	31
6.5	Automated parking payment service.....	33
6.5.1	Scope and objectives of use case.....	33
6.5.2	Narrative of use case.....	33
6.5.3	Actors: people, components, systems, integrated systems, applications and organizations .....	33
6.5.4	Issues: legal contracts, legal regulations, and constraints.....	34
6.5.5	Reference standards and/or standardization committees .....	34
6.5.6	Relation with other known use cases .....	34
6.5.7	General remarks .....	34
6.5.8	Data security, privacy and trustworthiness .....	34
6.5.9	Conformity aspects .....	35
6.5.10	User requirements and interactions with other actors.....	35
6.5.11	Drawing of use case .....	35
6.5.12	Data flow diagram of use case.....	36
6.5.13	Sequence diagram(s) of use case.....	37
	Bibliography.....	39
	Figure 1 – General overview of smart agriculture .....	12
	Figure 2 – Data flow diagram of agricultural product tracing.....	13
	Figure 3 – Sequence diagram of agricultural product tracing.....	14
	Figure 4 – The financial risks without collaboration .....	18
	Figure 5 – Financial risks minimized through the collaboration of multiple participants.....	18
	Figure 6 – Data flow diagram of financial service for fish farming.....	19
	Figure 7 – Sequence diagram of the financial service for fish farming .....	20

Figure 8 – Stakeholders and their relationships in chattel mortgage monitoring financial services .....	24
Figure 9 – Data flow diagram of chattel mortgage service .....	25
Figure 10 – Sequence diagram of the chattel asset financial service .....	25
Figure 11 – Architecture for P2P energy trading .....	30
Figure 12 – Data flow diagram based on hierarchical cyber enhancement framework for energy trading .....	31
Figure 13 – Sequence diagram for the energy trading process .....	32
Figure 14 – Involved parties and their relationships in the automated parking payment service .....	36
Figure 15 – Data flow diagram of the automated parking payment service .....	37
Figure 16 – Sequence diagram of the automated parking payment service .....	37
Table 1 – Summary of use case scenarios .....	8
Table 2 – Actors for agricultural product tracing .....	10
Table 3 – Data security, privacy and trustworthiness for agricultural product tracing .....	11
Table 4 – Steps of the agricultural product tracing .....	14
Table 5 – Actors for financial services for fish farmers .....	16
Table 6 – Data security, privacy and trustworthiness for financial services for fish farmers .....	17
Table 7 – Steps of the financial service for fish farming .....	20
Table 8 – Actors for chattel mortgage services .....	22
Table 9 – Data security, privacy and trustworthiness for chattel mortgage services .....	23
Table 10 – Steps of the financial service for chattel mortgage service .....	26
Table 11 – Actors for distributed energy trading .....	28
Table 12 – Data security, privacy and trustworthiness for distributed energy trading .....	29
Table 13 – Steps of the distributed energy trading .....	32
Table 14 – Actors for the automated parking payment service .....	34
Table 15 – Data security, privacy and trustworthiness for the automated parking payment service .....	35
Table 16 – Steps of the automated parking payment service .....	38

## INTERNET OF THINGS (IoT) – INTEGRATION OF IoT AND DLT/BLOCKCHAIN: USE CASES

### FOREWORD

- 1) ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.
- 2) The formal decisions or agreements of IEC and ISO on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC and ISO National bodies.
- 3) IEC and ISO documents have the form of recommendations for international use and are accepted by IEC and ISO National bodies in that sense. While all reasonable efforts are made to ensure that the technical content of IEC and ISO documents is accurate, IEC and ISO cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC and ISO National bodies undertake to apply IEC and ISO documents transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC and ISO document and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC and ISO do not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC and ISO marks of conformity. IEC and ISO are not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this document.
- 7) No liability shall attach to IEC and ISO or their directors, employees, servants or agents including individual experts and members of its technical committees and IEC and ISO National bodies for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this ISO/IEC document or any other IEC and ISO documents.
- 8) Attention is drawn to the Normative references cited in this document. Use of the referenced publications is indispensable for the correct application of this document.
- 9) Attention is drawn to the possibility that some of the elements of this ISO/IEC document may be the subject of patent rights. IEC and ISO shall not be held responsible for identifying any or all such patent rights.

IEC TR 30176 has been prepared by subcommittee 41: Internet of Things and Digital Twin, of ISO/IEC joint technical committee 1: Information technology. It is a Technical Report.

The text of this Technical Report is based on the following documents:

Draft	Report on voting
JTC1-SC41/220A/DTR	JTC1-SC41/241A/RVDTR

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this Technical Report is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1, available at [www.iec.ch/members\\_experts/refdocs](http://www.iec.ch/members_experts/refdocs) and [www.iso.org/directives](http://www.iso.org/directives).

**IMPORTANT – The "colour inside" logo on the cover page of this document indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**

## INTRODUCTION

Distributed ledger technology (DLT) provides the capability of a distributed ledger, which is shared across a set of DLT nodes and synchronized among DLT nodes using a consensus mechanism. Blockchain is a kind of DLT, which uses confirmed blocks organized in an append-only, sequential chain using cryptographic links. Blockchain is designed to be tamper resistant and to create final, definitive and immutable ledger records. Either DLT or blockchain can be quoted and used in terms of technology realization for application scenarios. Each participant in a blockchain and DLT network has their own tamper-resistant replica of transaction records associated with the participants who are individuals or organizations. Blockchain and DLT can be applied to solutions involving IoT systems which contain sensors, actuators, tags and readers, wearable devices, and service platforms, all of which are networked.

Through the analysis of the IoT involving the DLT and blockchain technology, the DLT and blockchain technology can help in solving the problems of IoT, especially those existing in the physical system, such as device digital identity, data source trustworthiness, key data forensics, data rights and interests, data assets and value exchange, etc. At the same time, the IoT also provides an important commercial application scenario for DLT and blockchain, and promotes entity and virtual economy combination. The integration of the IoT system with the DLT and blockchain technology can achieve complementary advantages and bring new business opportunities.

In fact, the integration of IoT system with DLT and blockchain can enable the creation of better solutions for many business sectors, particularly where those solutions involve information associated with physical entities, and where the solution spans many organizations with the need for trusted information to be shared by those organizations.

The solutions that can be provided by the integration are important for the business sectors such as agriculture, industry, healthcare, pharmaceuticals, environmental protection, transportation, security, finance, insurance, object tracing, supply chain, smart grid, and smart cities. This document is focused on collecting use cases in some of these sectors.

This document has been prepared based on the applications of IoT and DLT/blockchain technology with the template of IoT use cases.

## **INTERNET OF THINGS (IoT) – INTEGRATION OF IoT AND DLT/BLOCKCHAIN: USE CASES**

### **1 Scope**

This document identifies and collects use cases for the integration of the DLT/blockchain within IoT systems, applications, and/or services.

The use cases presented in this document use the IoT use case template.

### **2 Normative references**

There are no normative references in this document.
